>Only problem with the downconverters are that the frequency spacing on
>400MHz isn't the same as 800MHz (12.5kHz compared to 30kHz)

Possible solutions:

1. Convert to a band with 30kHz spacing or simple fraction therof.
2. Make the downconverter mixer freq step in 30kHz steps to convert
each cell freq to a single 400MHz freq. In this case the
downconverter does the scanning and the scanner just monitors.

As always be aware of legality.

1552. Seattle Trunked System Crashes (Again!)

Newsgroup: rec.radio.scanner
Date: 1996-01-19 00:00:00 UTC
From: bd703@scn.org
Message-ID: <DLELKy.7Bs@scn.org>
Source record: 242085

During their 6:30 pm newscast on Wednesday Jan 17th, KING TV aired a story about the Seattle trunked radio system suffering a complete failure Wednesday morning. The outage lasted about 20 min and occured sometime around 9am.

They showed video of the Fire Alarm Center consoles and status map, and a brief comment from Lt. Preston Bahng about the outage. They also aired a comment from Stan Wu, Director of Telecommunications for the city's Department of Administrative Services while showing the microwave dishes and panel arrays atop the Columbia Tower that are part of the system.

Mr. Wu explained that is was a computer problem and techs from Motorola had/ were fixing the problem and taking steps to prevent future problems.

It was also mentioned that this was the third outage in the past year.

Does anyone have further information about this incident?

Bye for now

Kerwin

Good question. There is alot of traffic about this in
comp.sys.palmtops. From what I have gathered, the NiCad memory
problem is mostly urban legend, and only affects batteries in deep
space satellites.

I am looking for a repair manual for a Bearcat 760 XLT scanner. Does anyone know where I can get one.
I really only need the schematics for the scanner and the optional tone decoder board. (I want to find out if I can hook my frequency counter to the tone board somewhere and find out the tones for several loacal agencies).
Please email me, I can't keep up with all of the posts.

On the LARGE PCB, (Remember where the FRAGILE CABLES are) find an IC with
the number 3357 (i.e. Read the Motorola MC3357 Data Sheet)

Connect Pin 3 (thats three) to a 33-47 Ohm resistor and then to a phono plug.

Keeps leads short and shielded.
Reassemble.
Thats IT !
BE CAREFULL !!! Things get awfully small in there.

Eric

It is good, but could be better. The floating birdie problem was a pain
in the butt and I had to modify mine to get rid of it. I hear there is
yet another mod to get around the cell phone squelch problem.

My advice: Get a late model. The current floating birdie problem is gone
and some claim better sensitivity. Personally, I don't believe the
better sensitivity claim as if it were true you would get more intermod,
pager crap, etc.

Alpha tagging the freqs is the only way to go for a handheld scanner.
Accept nothing less!

My PRO 2004 died on me a while back. I found a dead Zener Diode (and a few other components) that I am having a problem obtaining a good substitute for (TANDY National Parts Service says that the Diode is no longer in stock). Can anyone provide either a source for the part or a part number for a suitable replacement?

Details: Part number - D52
RS Part no. - DX2687
MFR part no.- HZ11B2L (10.6Volts)

The other failed components I have already replaced, this Diode is the only item that I am having a problem locating..

I appreciate any assistance on this..

>ask here for some real advice.

I use a "jewelers stone" and a dremel tool with a buffer wheel to
polish out the scratches on the crystal of my Rolex wrist watch. It
takes it to a high gloss and looks like new. The stone is really a
piece of
very fine buffing compound in the form what looks like a piece of
rock. I think a red rouge stick would possibly work as well. Also I
use a vinyl preservative made for car vinyl to put on all my equip
that is made of plastic. I use Amour All. Also you could spray it with
a clear gloss laquer after cleaning it up with ammonia(no amour all
at this time). The problem with that is it may wear off and look
like it is shedding its skin. I just use the armour all more often and
forget the laquer.

I just did this to a old PRO 34 I just obtained. It now looks like
brand new. I also performed a few mods that make it a great
portable for listening to almost any thing since it has 200
channels.

DB>Hello, I'm getting a new RS scanner and I need to get some ni-cads. do they
DB>still suffer from memory problems when charged after not being fully disharg
DB>They sell chargers that also drain the batteries down fully before rechargin
DB>them or is the charging circuit in the scanner good enough to keep the batte
DB>charged?

DB>Thanks for any help

The good news is that most scanners, unlike HAM HTs, take good old AA
cells. They are so cheap you can buy an extra set and always drain your
batteries. Using the famous amp sucking AR8K, I have four sets of Nicads
which I rotate between work and home. Check out the surplus stores. I
bought 4 850mA Nicads for a total of $6 at Halted in Sunnyvale.

The other thing you need is a cheap trickle charger. Fry's electronics
sells a charger that will charge 4 AA's in 7 hours for $10 including two
nicads. Its a Sanyo charger that I am sure can be bought everywhere.

One thing Rat Shack does sell that is good (besides scanners that say
MADE IN JAPAN) are their premium ni-cads. They are made by Saft.
Price-Costco sells Saft also, but for some reason not AA cells.

Toshiba has announced NIMHI AA cells at a whopping 1.2AH. NIMHI has no
memory effect but just terrible self discharge. They are dead in a week
after charging while a Nicad can be good for a month. I have not seen
the Toshiba NIMHI AA cells in stores yet.

Now that Marymac is no longer in operation, I don't know of any good sources for discounted Radio Shack scanners. Anyone have any recommendations?

Also, for those looking for a PRO2006, check out durhamnet.com's page on the WWW. They're advertising PRO2006s for $379. I mention it because another post indicated Durham was selling them for $300. Their prices on everything else are way high. They're advertising the AOR8000 for $720, for example, which anyone can buy in the US for $600 and from the UK for $630 (no gap model, obviously).

Gary:

I hope that an attorney (or a dedicated monitoring enthusiast) would be smart enough to realize that the CHP maintains logging tapes of their radio traffic. ANYONE with a legitimate request *that meets Public Records Act criteria* can obtain -official- logging tapes from Public Safety agencies in the State of California.

I just recently found out that it may be possible to get my BC890XLT to check for the various PL tones on a given frequency. The person i was talking to said that there is a keyboard sequency that will allow you to manualy tune through the Tones and see which ones break squealch. I beleive the post in question was for the BC9000, but the tone board is the same as the one on my BC890XLT.

Thank you.

> It was also mentioned that this was the third outage in the past year.

Sounds just like Portland, OR crappy 800MHz system. It fails reliably;-)
Even though Motorola said "It can never fail". During the Dec. 20
Windstorm it failed for 5 1/2 hours. The storm wasn't even that bad
(although the way the news covered it you'd think it was a typhoon).
Portlands has gone down numerous times before and Motorola never really
finds out why.

Check out http://www.orst.edu/~varineb/scanner.htm
for the 2 Oregonian newspaper articles on the Dec 20th Failure.

==========

Major "Real-World" Bugging Frequencies

Common Wireless Bugs (Low Power - Well under 35-50 mw)

44.500 - 51.000 mhz "Baby/Room" monitors
72.100 - 75.400 mhz Hearing Assistance systems
54.000 - 150.000 mhz "Kit" Bugs

98.000 - 108.000 mhz Cheap out-of-band FM Bugs
112.000 - 142.000 mhz Cheap out-of-band FM Bugs
140.000 - 160.000 mhz Cheap out-of-band FM Bugs

60.000 - 320.000 mhz Low Cost kit bugs
398.000 - 406.000 mhz DECO Bugs (398.600/605, 399.450/455, 399.025/030, 406mhz)
25.000 - 450.000 mhz European/English Kit Bugs

150.000 - 216.000 mhz Typical VHF "Body Wire" & Pro-Grade Bugs
109.000 - 140.000 mhz Digital VHF Pro-Grade Bugs
138.000 - 174.000 mhz Typical "Spy Shop" & LE Cheap VHF Bugs (155-172 Popular)
140.000 - 150.000 mhz Popular Xandi Flea power kits (143/144mhz)
150.000 - 170.000 mhz Popular Japanese Flea power kits (under 5mw)

150.000 - 220.000 mhz Commercial Wireless Microphones
169.000 - 172.000 mhz 47 CFR 90.265 Authorization *** VERY Popular ***
174.000 - 216.000 mhz 47 CFR 2.106 (NG115) Authorization
395.000 - 410.000 mhz German UHF Wireless Microphones (PK Electronics)
219.000 - 530.000 mhz English UHF Wireless Microphones (300-500 popular)
470.000 - 608.000 mhz Commercial Wireless Microphones
730.000 - 806.000 mhz Commercial Wireless Microphones

889.000 - 960.000 mhz Modified Cordless Phones (S/S & Hoppers)

380.000 - 480.000 mhz Video Bugs - US
890.000 - 960.000 mhz Video Bugs - US (902-928 Hot)
905.000 - 928.000 mhz Video/Audio Consumer Products (i.e.: Recoton)

1.700 - 1.930 ghz Video Bugs - US

30khz -300 khz Cable TV Carrier - Coaxial Bugs

100 - 450 khz Threat Window #1 Most CC Bugs
3khz - 3 mhz Threat Window #2 Expensive "Pro-Grade" Bugs
5khz - 32 mhz Threat Window #3 Popular WJ Carrier Current Rcvr
3khz - 50 mhz Threat Window #4 Realistic Threat Window for Telephone Wire
15mhz - 70 mhz Threat Window #5 Audio/Video "Micro-Wire" RF circuits

WECO Bugs "boosted/ultrasonic audio" found on Power/CATV/Telco lines

64kbps to 1.5mbps Digital Bugs T-Carrier-Lo (T-1 and Below)
1.5mbps to 50mbps Digital Bugs T-Carrier-Hi (T-1 and above)

2.048mbps Digital Bugs Definity Circuit Pack Bug
32mbps Digital Bugs TMS Channel/Backplane bridge
Designed to transmit on CC or Microwave ISM Spread Spectrum (2.4-6.0ghz)

VLF Devices

25khz - 90khz Tape Recorder Bias Osc-Low End (35-45khz Common)
80khz - 145khz Tape Recorder Bias Osc-Mid Range (88.2, 96, 100khz Common)
100khz - 325khz Tape Recorder Bias Osc-Pro Grade (100, 150, 300khz Common)
40khz - 50khz Tape Recorder DAT/Hi8 (44.1/48khz Common)

8khz - 35khz Recorder Audio Servo Noise (10-20khz Common)

7khz - 35khz Video Camera VLF Detectable emmisions
15.750 mhz Common NTSC Video Camera
15.734 mhz CCD/PCB Video Camera (very easy to detect)
15.625 mhz Common Video Camera

Also, be aware of ultrasonic/audio emmisions from most VLF devices.
(Utilize a EOD/Bomb Tech Stethoscope, and Ultrasonic Spectrum Analyser)

Spread Spectrum/Hopping Bugging Frequencies

Legit Industrial Equipment (very inexpensive)
902 mhz - 928 mhz ISM band A (Very Popular)
2400 mhz - 2484 mhz ISM band B (Very Popular)
5725 mhz - 5850 mhz ISM band C
10500 mhz - 10550 mhz ISM band D
24075 mhz - 24250 mhz ISM band E

SS Amateur Radio Bands Often used for eavesdropping (very inexpensive)
50 mhz - 54 mhz 6.00m Amateur Radio Equipment (STA)
144 mhz - 148 mhz 2.00m Amateur Radio Equipment (STA)
222 mhz - 225 mhz 1.25m Amateur Radio Equipment (STA)
420 mhz - 450 mhz 70cm Amateur Radio Equipment (47 USC 97.305)
902 mhz - 928 mhz 33cm Amateur Radio Equipment (47 USC 97.305)
1240 mhz - 1300 mhz 23cm Amateur Radio Equipment (47 USC 97.305)
2300 mhz - 2450 mhz 13cm Amateur Radio Equipment (47 USC 97.305)
3300 mhz - 3500 mhz 9cm Amateur Radio Equipment (47 USC 97.305)
5650 mhz - 5925 mhz 5cm Amateur Radio Equipment (47 USC 97.305)

SS Amateur Radio Bands Occasionally used for eavesdropping
10.00 ghz - 10.50 ghz 3.0cm Amateur Radio Equipment (47 USC 97.305)
24.00 ghz - 24.25 ghz 1.2cm Amateur Radio Equipment (47 USC 97.305)
47.00 ghz - 47.20 ghz 6.0mm Amateur Radio Equipment (47 USC 97.305)

SS Amateur Radio Bands Rarely used for eavesdropping (very expensive)
75.50 ghz - 81.00 ghz 4.0mm Amateur Radio Equipment (47 USC 97.305)
119.98 ghz - 120.02 ghz 2.5mm Amateur Radio Equipment (47 USC 97.305)
142.00 ghz - 149.00 ghz 2.0mm Amateur Radio Equipment (47 USC 97.305)
241.00 ghz - 250.00 ghz 1.0mm Amateur Radio Equipment (47 USC 97.305)
300.00 ghz - Light (3 Thz) Amateur Radio Equipment (47 USC 97.305)

Note: Most commmon spread spectrum/hopping bugging equipment will hop at speeds
between 100 and 50,000 hops per second. Equipment is readily available that
hops even faster (100,000 to 300,000 hops per second). Dwell times can be as small as 1us (one widely used military system uses a dwell time of 3-5us)

Outband Equipment
ANY Television broadcast or Cable TV frequency
ANY FM radio broadcast frequency
ANY Paging or Beeper frequency
ANY Cellular Telephone frequency

820 mhz - 960 mhz Modified (902-928) Cordless Telephones
Modified Amateur Radio Equipment (can be on ANY frequency)

Keep in mind that wideband (non-ISM) Spread Spectrum/Hopping Bugs are very
difficult to detect(even if you are within a few feet). Watch for carrier feed-through, and "Noise Floor Humps".

All Spread Spectrum devices are detectable

Once Spread Spectrum/Hopping Bugs have been located (on the RF spectrum) all
that can be done is to locate the sourse of the emission... it is virtually
impossible to demodulate a SS signal unless you have access to the key.

Also, a 500mw ISM device can easily have an effective range of over 20 miles.

Look for spectral anomalies (humps) on the Spectrum Analyzer, and back up
with a Compressive receiver.

Commonly Used Law Enforcement Bugging Frequencies

37.000 - 952 mhz FCC Surveillance Blanket Authorization

47 CFR 90.19 "Physical surveillance, stakeouts, raids..."
Straight AM/FM, FM-Subcarrier, SSB, Spread Spectrum, and Hoppers.
If encrypted, it usually uses in-band voice inversion or DES.
(Normally well under 2 watts... most under 35-150mw)

148 - 174 mhz
135 - 250 mhz Out-band Wireless Microphone
174 - 216 mhz In-band Wireless Microphone
350 - 440 mhz Common Video Freqs
380 - 930 mhz Wide Band Hoppers
806 - 824 mhz
851 - 869 mhz
905 - 930 mhz Popular Audio/Video Band

1.4 - 1.5 ghz Common Video Freqs
1.7 - 1.9 ghz Common Video Freqs (1.710 - 1.755 REAL Popular at
1/10 watt)
2.4 - 2.5 ghz Common Video Freqs (2.400 - 2.450 REAL Popular)
5.7 - 5.9 ghz Common Video Freqs (5.725 - 5.850 REAL Popular)
8.5 - 10.8 ghz Common Video Freqs

173.075 - LOJACK Auto tracking system beacon (200ms burst every second)

Police Speed Enforcement Radar
10.450 - 10.600 ghz X-Band
11.488 - 11.628 ghz RD Detector
22.976 - 23.256 ghz RD Detector-2nd Harmonic
24.050 - 24.250 ghz X-Band
33.400 - 36.000 ghz Ka-Band
700nm - 1100nm Laser Threat

Electronic Article Suveillance/Anti-Shoplifting Systems
8.10mhz - 9.30mhz Checkpoint (Hi-Q Tags) 8.2mhz Common
57.75khz - 58.75khz Sensormatic (Magnetic) Books, CDs, and Tapes
915mhz and 1830mhz Knogo (Microwave Resonant) Adhesive Labels

25 - 50 mhz "Bumper Beepers" (38 - 47 mhz very popular)
135 - 170 mhz "Bumper Beepers" (150-170 mhz very popular)
450 - 512 mhz "Bumper Beepers"
903 - 904 mhz "Bumper Beepers"
904 - 912 mhz "Bumper Beepers"
918 - 926 mhz "Bumper Beepers"
926 - 927 mhz "Bumper Beepers"

WARNING:
The area between 900 mhz and 6 ghz is EXTREMELY DANGEROUS as
the eavesdropping equipment in that range is inexpensive, low power,
and highly directional.

Additionally, most TSCM people will not check frequencies above
1.0/1.5 ghz or
3 ghz (because the equipment is too expensive for them to buy).

I have seen surveillance video tapes of TSCM inspections where the video
cameras (Watec), microphones (Sony), and microwave RF transmitters (AID -
2.4ghz) were never detected by the inspectors (using 1ghz AVCOM Spectrum
Analyzers).

Surveillance Satellite (TK-Keyhole) Frequencies
Note: Mostly Wideband Spread Spectrum/LPI channels

420mhz - 450mhz
1.2ghz - 1.4ghz
1.7ghz - 1.9ghz (1.76-1.84 real active)
1.9ghz - 2.2ghz (2.115 real active)
4.9ghz - 5.0ghz
7.5ghz - 8.3ghz
10.6ghz - 12.6ghz (11.7-12.2 active)

23.6ghz - 24.0ghz
25.5ghz - 25.7ghz
22.8ghz - 33.5ghz
42.5ghz - 47.0ghz
50.3ghz - 52.4ghz
78.0ghz - 85.5ghz
86.3ghz - 98.3ghz (86-92 real active)

Commonly Used by Federal Agencies for Bugs, Wireless Microphones,
and Body Wires (also 138-220 mhz, and 399-420 mhz, under 25-50 mw).

409.4000 Federal Shared

960-1215mhz Spread Spectrum Systems (Wideband)

Generally Recognized Federal Bug/Spy Bands
Primary - 25-50mhz, 135-175mhz, 225-440mhz, 1710-1950mhz, 8.3-12.5ghz
Secondary - 890mhz-5.50ghz, 7.0-9.5ghz, 10-39.6ghz

Also, Wide Band Frequency Hopping centered on various UHF-TV channels
(ie: 510 or 670 mhz with a hopping width of +/- 25 mhz)

Keep in mind that the federal government can use virtually any
frequency between DC and light.

Band Width Resolution and Filters

Examine the spectrum with the following BW resolutions/filters:

Utilize all BW resolutions/filters between 5hz - 200mhz (depending
on band being checked)

Note: A programmable digital spectrum analyzer should be used!
(1/3/5/10/15/20/25/30/50/75/100/150/200... Sequence is prefered)

BW Res - Usage/Primary Function
100/200 mhz - Resonate Cavity Bugging Devices/SIGINT Devices
125/35/8mhz - Resonate Cavity Bugging Devices/SIGINT Devices

50/20/10mhz - Diplomatic/Intelligence Microwave Bugs
40/20/10mhz - Diplomatic/Intelligence Microwave Bugs

13/16/20mhz - Microwave Wideband
11/12/13mhz - Microwave Wideband
.5/1/2/5mhz - Microwave Wideband (Burst Bugs)
18/26/36mhz - Satellite Wideband (Video)
2/4/6/8 mhz - Microwave Wideband (Video)
3/6/12 mhz - Microwave Wideband (Video) - Common
.5/1/3 mhz - Microwave Wideband (Video/Burst/Pulse)

1.5/.75 khz - Frequency Hopping Bugs - VERY Common
.4/.2/.1khz - Frequency Hopping Bugs - VERY Common
3.2/6.4 khz - Frequency Hopping Bugs - VERY Common
10/20/25khz - Frequency Hopping Bugs - VERY Common
50/75 khz - Frequency Hopping Bugs - VERY Common
100/250 khz - Frequency Hopping Bugs
300/500 khz - Frequency Hopping Bugs
1/2/4/8 mhz - Frequency Hopping Bugs

300/250 khz - Regular Wide Band Broadcast FM
150 khz - Narrowband Broadcast FM Audio, Television Audio
280 khz - Narrowband Broadcast FM Audio, Television Audio

200/150 khz - Commercial Wireless Microphone - High Grade
150/100 khz - Commercial Wireless Microphone - Concert/Broadcast Grade
58/77/84khz - Commercial Wireless Microphone - Typical Body Wire

50/60/75khz - Commercial Wireless Microphone - Typical police device
8/25/50 khz - European/Japanese Industrial Bugging Devices

50/30 khz - Wideband FM two-way communications (ie: Cellular
Telephone)
16/15/6khz - Normal FM two-way communications
3/6/8/12khz - Narrowband Commercial - Voice
1/3.2/6khz - Narrowband (Marine, HF, etc...)

120/9/1 khz - Narrowband (Bias Osc./Video Cameras/SIGINT)
30/750/500hz- Narrowband (Bias Osc./Video Cameras/SIGINT)
56/75/100hz - Narrowband (Bias Osc./Video Cameras/SIGINT)
30/150/200hz- Narrowband (Bias Osc./Video Cameras/SIGINT)
250/300 hz - Narrowband (Bias Osc./Video Cameras/SIGINT)

300/250 hz - Narrowband OOK/FSK/Data, etc...
300/250 hz - Narrowband OOK/FSK/Data, etc...

Subcarrier Detection:

10 - 500 khz - Most Commonly Used Subcarriers
30 - 150 khz - Typical Broadcast FM Subcarrier (FMSubC)
19/27/38 khz - Typical Stereo Broadcast FM Subcarrier (FMSubC)
67 khz - Typical Musicast/Musak Broadcast FM Subcarrier (FMSubC)

2 - 10 mhz - Audio Subcarriers often used with Video (4.2-8 mhz
common)

5khz - 950khz - Realistic Subcarrier Threat (Audio)
1mhz - 15 mhz - Realistic Subcarrier Threat (Video)

Summary (this will catch 99.99% of all Non-Intell/Diplomatic RF bugs)

All TSCM Inspections should include the following frequencies:
(Expect to see less than 10-35 mw maximum at the TX antenna)
(Do not expect the signal to be present for more than 20uS-100uS)

To find RF transmitters a search grid of 15 foot by 15 foot (or
less) should be used.

Also, all phone rooms, riser closets, demarcs, boots, etc. MUST be
checked.

Remember that the microphone/camera can be hundreds of feet away
from the transmitter.

Use a digital spectrum analyzer and a wideband receiver with an analog
10.7/21.4mhz SDU on the IF, dispersions of 100/200/500khz).

RF Spectrum Analysis and monitoring should take place for at least
twelve
solid hours during a regular sweep (72 hours or more is preferred).

To prepare for IPM the spectrum should be evaluated/monitored for at
least four hours prior to the event.

Most non-gvt RF bugs will have a transmit frequency between 9khz
and 6ghz.

The Spectrum Analyzer inspection must cover at least 3khz to 40 ghz

VLF Detection-Audio .3 khz to 100 khz Video Cameras & Tape recorders
VLF Detection-RF 12 khz to 500 khz Video Cameras & Tape recorders
VLF Detection-Audio .3 khz to 150 khz Microphone/Ultrasonic
Chirping

Carrier Current Bugs 3 khz to 50 mhz 99% Voice

RF Bugs-HF 3 khz to 50 mhz 99% Voice
Space RF Bugs-VHF 30 mhz to 300 mhz 10% Video/80% Voice/10% Data
Space RF Bugs-UHF 300 mhz to 900 mhz 25% Video/60% Voice/15% Data

RF Bugs-Microwave1 900 mhz to 3.0 ghz 70% Video/20% Voice/10% Data
RF Bugs-Microwave2 3 ghz to 18.5 ghz 75% Video/15% Voice/10% Data
RF Bugs-Microwave3 18.5 ghz to 40.0 ghz 75% Video/ 5% Voice/20% Data

...and of Course Infrared! (Look for "IR Blooms")

700 - 1100nm Audio Transmitters/Lasers (CF between 880 and 950nm)
750 - 900nm Night Vision Illuminators
900 - 1710nm IR Video Illuminators

Note:
Most military/intelligence and governmental TSCM inspections look
for devices
between 3khz to 50mhz for Carrier Current, 20khz to 40ghz for
regular free
space RF radio devices, and directional microwave devices from
.5ghz to 120ghz.

>able to hear the mobile units 5 miles away with an indoor antenna.)

Mike;

I picked up a Bearcat 860XLT from Best Buy a while back. Set me down about
$200 or so... I can pick up the 800 mhz freqs, and I can store more channels
(100) than I care to. I live on the east side of WA, and have a little
trouble picking up WA on the freqs that others have listed here. I have
adjusted my squelch and played with the antenna, but my reception still sucks.

IMO the antenna on the scanner just isn't very good (I have it about 7 feet
above the floor).

I use the Gesmundo software for the 3000 on my 2500.
The software It sure seems real slow compared to the CE232/2006 setup
I now have also.
ALSO the 2500 seems to not like a hot car out here in Arizona.
Frequency shifts right out of the passband.
Other problems with the rotary knob for channel changing, its an
encoder and ACE's official response to my complaint was thats the way
it is and we can't fix it.
Also have problems with WIDE FM and suspect sensitivity problems.
I have 2 of em
Anyone have comments????

1599. Help Discone or Austin Ferret?

Newsgroup: rec.radio.scanner

I want to put up a second antenna and am looking at either a Austin Ferret or a Diamond\Icom Discone. I am mostly interested in monitoring 163-170Mhz 225-420Mhz and 861-869Mhz. Anyone have any opinions or experience with either?

Thanks
Mike

Right On, Bro! We need more retro-mods in order to set a better example for the folks on the net. I not only blocked the specific frequencies quoted in the latest ECPA, I also modified my receiving equipment to block virtually everything I think MAY be declared illegal until the end of this century (only 4 years from know). We wouldn't want any stray TV, data, fax or teletype either!

Who knows, maybe this is the next Bill Cheek book!

Steve

Most of it's worthless, such as "Honey, what do you want at the Burger King
drive through".

Some gems I heard (while in Canada of course :-)) are:

* a guy calling gay personal want ads and making dates
* 911 calls
* a 900 phone sex conversation
* sleasy business deals
* relationships breaking up
* couples talking about sexual acts
* a guy calling a prositute and talking about rates for various services
* criminals looking to buy handguns on the black market
* details of a fist fight the day after by one of the participants

The way to find out is to look at the antenna array. The Lo-Jack has an
aray of four antennas in a box pattern usually on the roof or back trunk
lid. The Robbery Alert Teller (RAT) has a trio of antennas that are on
the roof in a triangle pattern close together. Portland Or and other
Metro area use the RAT. Since the system Motorola sold Seattle is similar
to Portlands they may have it. Not all cars will have it though.

In defense of Bruce, there certainly are several amateurs in this
area (I live a few miles from Bruce) that hold Extra or Advanced
class licenses and are extremely critical of the Technician
license (and licensees) after the dropping of the code requirement.
At least one is very verbal about this, and he's generated some
seriously ill will. There really is a lot of license class snobbery,
and there really is a lot of anti-"no-code" sentiment, to be found
in amateur radio. This isn't limited to this area as far as I can
tell. Look at the flames we commonly see here on the Usenet
from all over the US, using all kinds of language to insult
amateurs that don't have code credit. It's a very sad commentary
on the ability of amateurs to spread goodwill, I'd say.

At the same time, the flame from Bruce did nothing to spread
goodwill, or cast the Technician class licensees in a positive
light. It is true that Extra and Advanced class licensees have
indeed demonstrated some more knowledge and skill than a Technician
class licensee, at least in the amateur licensing process. That
doesn't mean they're any "better" than a Technician, though. I
know many Technician/Tech Plus licensees that I respect much
more highly than some Extras I know.

I'm a strong proponent of replacing or eliminating the code requirement,
and I very strongly dislike the code snobbery I often see. If you don't
believe me, you can browse the archives of rec.radio.amateur.misc
for a note I sent last summer (search for "snot-hole" in the subject
line). At the same time, I'd suggest to Bruce to ease off the flames
(against Packard-Bell, against me, against just about everyone) and
remember that anti-Extra snobbery is just as offensive as anti-Technician
snobbery. Maybe I am a pompous ass to say it, but I think it is true ;-)

I agree with Steve, but if your hell-bent on accessing celluar
why not look at modifying a celluar phone! I have seen a cell
phone mod(keyboard) on this topic in this USENET category for
OKI phones. If you can find a used phone that you can easily
modify you are in business. I know a guy at work who bought a
used celluar for 50 bucks.

Here we expend a lot of energy into modifing a scanner to do
the job of a cell phone when we could get a cell phone!

: ask here for some real advice.

I asked the same quesiton in an electronics repair group. Here a couple of the responses I received:

1) I've used Meguire's polish on general aviation acrylic windows. They make a few grades to remove scratches depending on how deep they are. You might try a general aviation store at the local airfield.

2) There is a company called NOVUS in Minneapolis which makes a line of plastic care products.

I think that the latter was at a pet shop / aquarium repair or polishing isle.

Cheers.

D52 is no longer used in the 2006 but D57 is an HZ11B2L. No RS part
number was given in the service manual. You may find a generic 10.6
zener for a replacement, I'd think.

>ask here for some real advice.

Don't do the nail polish trick, you can ruin the plastic that way. There are several methods that will work much better. The tricks are the same one's plastic kit modelers use to fix damaged/blemished surfaces on clear plastic parts.

If the scratches are simple, shallow, hairline scratches from abrasion, then you can try TOOTHPASTE (I used to like Ultra-Brite, a little gritty is good) and polish the entire area with your finger. Just apply the toothpaste (use a clean rag, like an old T-shirt... nice and soft) and gently rub-polish for 5 minutes. Usually, by the time you are done, the plastic looks a bit FROSTED (a nice even satin finish is what you want).

At an automotive or hardware store, buy some plastic polish (like McGuire's Polish) and use this in the same manner as the toothpaste. A good buff with the polishing cloth and the surface should look like brand new.

If a little blemishing remains, spreading a VERY thin coat of Future Floor Polish on the window (mask off the rest of the scanner) will do wonders. It only takes a few drops, as Future is runny like water, and self-levels on the surface. Use an absorbent (paper) towel to remove excess from one corner.

If your starting point is DEEP scratching, then you start with 600-1200 grit sandpaper until the scratches are rubbed ot, then repeat with even finer sandpaper (2400-4000 grit). After this, proceed to the toothpaste or polish step and finish the same way.

You have to be careful to keep this stuff off of the rest of the scanner (use masking tape and newspaper or lunch baggies or the like), and you can only use some of these steps (depending on the damage), but these usually work and NONE of this stuff should eat plastic like nail polish would.

BTW: Future is just a water/alchohol/vinegar soluable acrylic version of clear nail poilish. If you make a mistake, you can clean it up and do it again with no harm done.

> experience with either?

Using it for a MTV-7100 handheld...

I have a Diamond D-130J discone in my attic and it performs well under...say, 200Mhz, but I don't see much improvement over a $9 Radio Shack whip in the 400Mhz and up range. The 225-400 is a toss-up.

As for the Ferret, I own the "Condor" and was very dissappointed. Sure it looks ominous, but again, the Radio Shack $9 whip antenna beat it hands down, especially in the lower frequencies.

The two strangest things I've ever heard were
one: A pimp trying to "turn" a girl out .... sounded just like a movie
two: A guy talking about getting ripped off on some business deal and how
he lost x numbers of $$$, only to find out x was over 1/2 a million... no
big deal, but I could not believe how calm he was..

Okay.....here's fifty things for them to contemplate.

1 AGC-controlled front end and IF stages
2 Alphameric storage; per channel
3 Attenuator; front-end electronic; programmable per-channel
4 Bandpass filtered front end: 7-filters minumum to cover
25-1300MHz;
minimum.
5 Baseband audio output (line level; unfiltered)
6 Beep; adjustable
7 Carrier Operated Relay (contact closure output)
8 Computer Interface port; EIA-232 or open
architecture;19.2-kBps+;
2-way control & data acquisition
9 Computer Interface port; infrared;19.2-kBps+; 2-way control &
data
acquisition
10 Computer software for 2-way interface; BASIC source code
provided
11 Data/Tone Squelch; reject non-voice signals
12 Decoder; CTCSS
13 Decoder; DTMF
14 Decoder; Tone; user adjustable, 300 Hz - 6 kHz
15 Delay; adjustable; programmable; 0-15 sec
16 Discrete components; minimal LSI
17 Display lighting; indiglo; time delay and continuous
18 Double balanced mixers
19 Duplicate entry detector
20 Event counter; per channel
21 Event Log in Buffer Memory; dump to computer port later
22 Filtered IF sections
23 Fine-tuning; user adjustable; analog or digital in 10 Hz
steps
24 GaAsFET low noise front end for VHF & up
25 Human engineered
26 IF bandwidth; programmable: 5 kHz; 7.5 kHz; 10 kHz; 15 kHz; 25
kHz;
50 kHz; 100 kHz; 200 kHz
27 Keyboard; affirmative action; large keys
28 LockOut Reviewer

29 Manual Up/Down
30 Metering; Center Tuning Indicator; analog or 7-seg
31 Metering; Signal Level; analog; or 20-seg digital; am/nfm/wfm
32 Mode settings; User selectable: AM; NFM; WFM; SSB
33 Multiple antenna ports; keyed to bandpass filter ranges;
programmable
34 NOAA weather radio alert
35 Program Organizer; by freq; by alphameric codes; by mode; etc
36 Programmable channels; 200 to 1000
37 Reject undesired bands from a programmable memory
38 Reject undesired frequencies from a programmable memory
39 Scan Banks; 50 or more
40 Scan; Up/Down
41 Search & Store function with special store banks
42 Search Banks; 10 or more
43 Search from any frequency in the display; direct search up or
down
44 Search increments; User selectable: 2.5 kHz; 5 kHz; 10 kHz;
12.5 kHz; 30 kHz; 50 kHz
45 Search; Up/Down
46 Sensitivity: 0.25-uV @ 10 dB S+N/N
47 Sound Squelch; reject dead carriers
48 Speed: 50-100 ch/sec
49 Tape Record audio output (line level; voice band)
50 Triple up conversion

>
>The question is... what does "SVC" stand for and what does it do?

The SVC button on the BC230XLT/BC220XLT stands for "Service Scan,"
which is the same feature Electra and Uniden previously termed
Service Search.

In addition to 200 conventional memory channels, the
BC230XLT/220XLT has several frequencies preprogrammed at the
factory in categories of Police, Fire/Emergency,
commercial Air, and Marine. You can select the appropriate
category and the scanner will scan those preprogrammed frequencies.

The preprogrammed frequencies are held in read only memory but
you can lock a finite number of them out of the scan list.

I have for sale a Bearcat 8500 XLT Scanner in mint condition. This scanner has 500 channel coverage and an ALPHANUMERIC display (rather than a readout that says 460.2250 MHZ it can be programmed to say "Boston PD - Area B). It covers 25 MHz to 1.3 GHz - EXCEPT cellular - I have not found any cellular restore mods, but I keep hearing rumors that they're out there.

The scanner is in perfect condition, both electrically and cosmetically. It also includes the original box and manual.

I bought this scanner for $379.95 from HRO in Salem NH - & have the receipt as well. I'll sell it for $225+ UPS/Insurance - cash or money order only.

Please reply by email to charlie@pcix.com

I think that the majority of scanner hobbyists just want to get the most
out of their investment in scanning equipment as possible. Modifying a
scanner for the sole purpose of listening to cellular does not seem to be
a primary reason for most people.

Message-ID: <4dr35l$fe3@crl10.crl.com>
Source record: 242066

For Sale:

Glen 326-G Digital Controller manufactured by Glen Manufacturing in
Stockton, CA

<start: direct quote from the manual>

"Congratulations, you have just purchased a very unique and precision
instrument. This unit contains a VFO, Digital Computer, Frequency
Counter, and a 5 digit LED display. Its function is to generate a stable
variable frequency, compute and display the resultant transmit or receive
frequency.

Technical Specifictions:

VFO Frequency Range--7 to 25 MHz on fundamentals, 14 to 50 MHz on 2nd
harmonic.

Tuning Ratio---------10 : 1 vernier on Coarse, and Fine controls.
500 KHz may be tuned on any band.

High/Low switch------Shifts any selected frequency up 400 KHz,
allowing coverage of any band of 900 KHz.

Display--------------MC or KC gives a choice of either 1KHz, or .1KHz
resolution on display.

Accuracy-------------1KHz in MC position, .1KHz in KC position.

Counter Range--------5KHz to 50MHz, fully programable on 5 digits.
X1 or X2 multiplier for harmonics.

Power, Base model----117 Volts AC @ .1 Amps @ 60 Hz

Power, Mobile model--10 to 20 Volts DC negative or positive gnd.
Either lead may be reversed with out regard
to polarity.

Note:
Novice band, business band, or citizen band is not permitted the use of a
VFO to transmit with. Only crystal controlled transmissions are
authorized by the FCC on these bands.

If the purpose of the VFO is to monitor the various bands previously
mentioned, and a transceiver is used, then the transmitter should be
dis-abled or the microphone removed to prevent the psssibility of
transmitting.

NiCd "memory effect" is an old wives tale, long ago dispelled by Gates
and GE studies commissioned by NASA and reported in the NASA Technical
Journal. There is a LOT to the proper care and feeding of NiCd cells,
but the "mempry effect" can be dismissed as an urban legend.

Donald,
You may be refering to my post for the BC9000. What I do is program the frequency into the scanner. Then push "PROG" then push "CTCSS" and then push "HOLD". "00.0Hz" will now be displayed on the screen. You can now manually scan through the CTCSS tones using the tuning knob. You will be able to catch the transmission on one of the tones if they are using one. This is the way it works on the 9000 and I heard it is the same way that it works on the 890.

I got a nylon type radio holder from a gun show for about 10 bucks and
it works great. I was breaking belt clips on my hand held scanners all
the time.

For the car I use a drink holder that I modified to mount in the middle
of the dash and I use one of those cd to cassette adapters to put the
sound thru my radio speakers.

I have two scanners for sale:

Uniden BC 200xlt. Like new in box with manual, charger, battery, case, and antenna. $200

Radio Shack Pro 26. This is the current top o' the line. Great shape with antenna, NiCads, manual, and metal belt clip (I hate those plastic ones) $275

Minnesota is no different then the rest of the country. We use the same allocated cellular frequencies just like everyone else. You need to be more specific for the area you are looking for.

The radio shmuck mobile ant, and a uniden 760xlt

About six houses up the street and down from my house... with radio shack antenna and Uniden 200xlt... but then I live right next to power lines :(

->Okay, one thing. It's nice, but sometimes a frequency is used for more
->than one service - please let it have an override!

You would think this would be easy for Uniden to figure out. The
BC100XLT and BC200XLT have duplicate entry detection. You try to store
the same frequency on a second memory and the display shows the other
channel number. If that's what you really intended, you just press
Enter again and it stores the frequency on the second channel.

Maybe Uniden should take a look at some of their past products.

You are hearing cellular phone IMAGES. They are not the actual cellular frequencies. Your scanner is a double conversion scanner and does pick up images about 10.7 MHz above the actual frequency. Some scanners recieve images below the actual frequencies. Happy listening!

Anyone have info on what system SPD needs Doppler arrays on patrol cars?

I was watching a tv news program and saw a patrol car with what looked like
3 or 4 Doppler antennas drive past in the background.

I don't know if they are using Lojack around here but saw a story in USSN
a year ago about "RAT". Can anybody advise if that is in use here in
Seattle?

Kerwin

11 band, and 50 channel. It probably does NOT have 800 MHz. I would bet for $80 it does not. I don't know the SCAN RATE either. $80 is a fair price for a fairly new scanner with these features. The key is the 800 MHz coverage. Alot of Public Safety Agencys are moving to 800 MHz. I would definitly buy a scanner with 800 AT LEAST!!

Hope this helps!!

Daryl.

reasons.
:> Most burglars want nothing more than to get in and out with no hassle. A
:scanner would
:> only help the burglar get away; he'd have no reason to stay to set up a
:confrontation.
:> Very few (and I mean *very few*) criminals use scanners. So few that
:when it does occur,
:> it's very remarkable, and the story really makes the rounds. Of course,
:what's forgotten
:> in the retelling is that the scanner obviously didn't help much (he got
:caught, didn't

REMEMBER FOLKS: Scanners don't hear things... people with scanners hear things. If you based scanner law on firearm law it seems that we would have the right to all protocols and decryption and the scanner manufacturers would have the right to manufacture and sell almost anything they wanted. If crime is the issue I think Scanners should be pretty low on the priority list of things that are going to reduce crime. If scanners are illegal only criminals would have scanners. (I hope this sounds as stupid to you as it does to me)

I typically find that most folks have more hangups and problems and complain
more than the daytime soaps. I think it's kind of depressing to listen to.
It's a good slice into how strange our society really is.

When I'm on the cell phone I like to talk about dead bodies in my trunk and
the 50 kilos of coke I stashed downtown at the back door of some dance club...
hopefully some will be eavesdropping.

:vfinley@icon.net
That's how the priority works. It checks the priority channel every 2 sec so
your regular channel is interrupted. This can be annoying but that's the
trade off. Your 43 is working fine.

> Let me comment for the log periodic. Bill's bias'd comments not
> withstanding.

"Bias'd"? The fellow above is contemplating parting with $228
and my path to a MUCH lower cost possibility is BIASED? You
gotta be drunk, Mister Radio Amateur WA6SUL. There's no
bias there. But what there is down between the lines is the
MUCH higher cost of erecting that big Create Log Periodic, and
the more esoteric installation definitely means more
maintenance. TV antennas go up and stay up, often on a broom
stick, for ten years.....

> I have had the 55-1300 MHz version of Creates l-p antenna
> for over 5 years, without any deterioration of quality. The
> construction is done to machinist's grade tolerances. Excellent
> construction. I could not build a similar antenna for less unless I
> gave up a lot of quality,

I didn't cast any dispersions on the QUALITY of the Create
antenna. For $228 and a *few* dB of gain, it better have some
quality behind it. But the sucker is large and has a higher
windload factor and therefore requires a more involved
installation. You didn't tell the fellow THAT.

> (such as Bill suggests with his "TV antennas".)

I don't HAVE TO suggest anything about TV antennas. They
are a KNOWN commodity, wingnut! It's the Create antennas
that are the unknown factor in the equation. A halfwit on
a bubblegum budget can put up a TV antenna. Do the same
with a Create antenna, and it's coming down in the first
breeze.

> You have to see these antennas first and then decide which
> one will be maintenance free for x number of years of exposure to the
> elements.

Yes, he will have to pay $228 to *see* one. So while he is
getting his installation plans drawn up; budget pulled together;
and neighbors warned of a new monstrosity soon to go in the
sky over his shack; he just MIGHT can stick up a TV antenna
mounted in the vertical plane......and find it to be immensely
rewarding in terms of performance.

No bias there at all, Mister Radio Amateur WA6SUL. But I
did offer him an extremely low-complexity and low cost
alternative that just MIGHT outperform the Create antenna
every which way from Sunday. You see, by definition and design,
log periodics do NOT have high gain nor very deep nulls off
the frontal lobe; nor all that impressive of a F/B ratio.

TV antennas do! A few degrees off on either side of center
is the first deep null of a TV antenna.....which is ideal for
rejecting interfering signals close to the same azimuth as a
desired signal. TV antennas have very high gain in most of
their bandwidth and an excellent F/B ratio. Depending on the
quality of the TV antenna, there is every chance that it will
meet or exceed the performance of the Create at a cost less
than half the Create and perhaps 1/3 the installation cost.

No bias intended......but a TV antenna is a strong option for
the scannist to consider before going big budget and esoteric
installation with a log-periodic. It's just an option, but a
damn viable one........and I would have done the gentleman a
disservice had I not mentioned it.

Your accusation of "bias" and related inferences are strongly
suggestive that your antenna is a prosthesis for some dimunitive
member of your anatomy; i.e., a phallic symbol, as is all too
common among certain classes of the radio hobby. They erect BIG
antennas because nothing else is very erect or big. Be careful
with your Freudian Slips, Mister Radio Amateur WA6SUL; they might
give more of you away than you'd prefer.

Bottom line is that you COULD have offered the gentlemen the benefit
of your experience without the cute slurs thrown at me. So please
pardon my suspicion of your use of a prosthetic phallic symbol, ok?

A friend of mine is a "stringer" for 4 different newspapers.2 local,
1 regional, & 1 national.
In the past 10 years or so he has gotten *many* newstips by listening
to cellular & cordless phones.
Many involved police or criminal activities. Some were politicians,
and many were of a humorous nature. He calls in as much info as he can.
He says 90% of the time nothing shows up in print but the editors
appreciate any info he submits so they at least have the option to
investigate.
They pay him well. In fact the tips have paid for the several scanners
and shortwaves he owns with plenty left over to fund his other hobbies.
He says he occasionally feels guilty for listening "but it ain't
easy"

What passes for memory problems in most NiCad packs is an inability to equally charge all the cells in the battery. (Using battery here in its original meaning of more than one cell.) There was a very nice article about this in Popular Photgraphy sometime in 1995.

For battery packs such as the Radio Shack scanners employ, the solution is simple. Take the batteries out of the pack and test the voltage. If any are lower than the rest they need to be charged and can easily be charged out of the pack with another charger.

For batteries in a sealed system such as the Bearcat packs and NiCad camcorder packs (some camcorders are now using gel lead acid batteries) one can't charge the cells individually. The alternative is to discharge and recharge the packs until a full charge is achieved in all the cells. There is now a device that does just that for camcorders. It discharges and recharges the pack!

If you want to do it yourself you need to know how many cells there are in the pack and discharge the pack to about 1.0 volt per cell before recharging.

In my opinion this whole situation has nothing to do with any "memory" whatsoever. I don't want to join the "anti-memory" religion however and so cannot disprove "memory". It is hard to disprove a non-existent entity.

There were some specific memory problems in some cells used industrially and this is where all the memory ideas began. Furthermore some people feel that the discharge and charge of cells prevents memory problems. It is certainly supposed to help the cells and whether you call this memory prevention or not is up to you!

>>> (in increasing price):

>>You didn't list the Passport LCD (I think it's the 5000). Very nice, good
>>price. BeL's seem to false a lot.

I haven't checked out the product lines, so here are some simple guidlines.

You want to get the highest sensitivity possible. -105 Dbm is a good starting place. Sometimes the manufacturers put non-negative numbers in the spec-sheets, but the larger the better. -110 Dbm is better than -105Dbm.

False alarm supression is a good feature. It helps in the cities.

Laser detection? Don't worry about it. By the time you pick it up, you're clocked. The best thing you can do here, is drive with your lights on. The background noise that they make in the IR spectrum makes it harder for the laser to get you speed. (dosen't do you any good for the back of your vehicle) Another problem with the lights; It makes you more noticible in the daytime.

How to use: Stay withing 5 - 10 MPH of the speed limit unless you're on the interstate and there are several vehicles going above the speed limit in front of you. You'll want to stay at least 1/4 - 1/2 mile behind these vehicles. Their purpose it to prompt the shooters in to using their radar. If you catch a hit. SLOW DOWN. The radar guns have around 4 - 6 degrees of beamwidth. Police officers aren't stupid. If they see you duck into a line of traffic, you're bagged.

((Sorry for being somewhat "off the subject," but as mentioned earlier, it IS a receiver))

>Does anyone have any experence with the CLP5130-2 Log Periodic Ant that
>EEB sells? I'm thinking of getting one, but wanted to hear from others
>before spending $228.00

Antennas from Create have always been priced up tight and out of
sight. Not to say they don't work; they do. But.....

For a LOT less money, you may do almost as well, if not better, by
mounting a quality TV antenna in the vertical plane with a 75-ohm
balun (TV matching transformer) up at the feedpoint, and then a run of
RG-6 satellite cable down to the scanner. Use gold plated Type F
conectors on the RG-6 cable and a gold plated F-to-BNC adapter down in
the shack to adapt the cable to the scanner's BNC connector.

TV antennas are a hybrid mix of yagi and log periodic designs with
very high gain in the bands of design, notably:

54 - 88 MHz
88 -108 MHz
174 -216 MHz
470 -890 MHz

Given the "harmonic" perfomance possibilities of antennas, there is
almost always overlap with gain in bands that are related by an octave
to the design band. This is to say that a TV antenna will also offer
gain in the 108-174 MHz, 216-470 MHz, and 890-1300 MHz bands.

Gain may also be well above unity between 25 - 54 MHz, thereby making
for a very cost effective, high performance directional beam for the
scannist. TV antennas will certainly be easier to install, keep in
operation; and to maintain, than the much larger and more expensive
log periodics from Create.

Food for thought, anyway, and in many cases, can be tried by the
scannist without undue expense, since many already have TV antennas,
rotators, and masts laying around. The important thing is to devise a
means for mounting the TV antenna in the vertical plane. (Easy)

Off to Mauritius in March with the trusted AR8k but don't have any
frequencies. Anybody have anything ?
Aero, marine, etc.

Thanks
Noel.

1687. Durban and Capetown, S.Africa

Anyone have any interesting frequencies for Cape Town or Durban (VHF).
Both are seaports so there should be some good marine/customs
activity.

Noel.

Sounds good, this group gets almost (and sometimes more) posts that 2600,
and they have a permanent IRC channel, with at least 10 people at any one
time, so I'm sure it would be popular, I'm off to it now........

Does anyone have the channel frequencies for the Seattle System?

How about more detailed information like number of channels and who is using
the system. I have noticed SPD kepped the old 460Mhz frequencies running.

IC-2SRA - you really mean "2"?? That transceiver has only ONE band output from its transmitter, and that's a 2-meter unit. The IC-4SRA is the one that has 440 MHz output. The RECEIVE side in both units is wide band - but doesn't have a transmitter circuit built in.

I'll have to back Bill on this one. I mounted a 17 element TV fringe antenna in the vertical plane at 45' above the ground. I was able to recieve vehicle VHF transmitions out to about 60 - 75 miles. Cordless phones out to 9 9 - 11 miles.

As a side note, If you can be certain that there are no high power signals in your area, a 10 Db antenna amplifier can extend your reception. They can usually be found at your local TV place (prob the R/S place) for around $10 - $20.00. I didn't use them in my setup. My greatest fear was the local SD transmitting from their cars. I don't know what kind of over-load protection the amplifiers have for strong signals.

If the rest of the group will notice, Bill was subversively attacked in this thread. He only responded to the assault. If you don't provoke him, he will provide meaningful insight to the people who need advise and help in this newsgroup.

I may not agree with every thing he says, but I don't have to banter words
about it. The meaningless tripe is what irks me.

I have the BC 55xlt scanner and I can't seem to get some freq's.
I have a book of freq's which includes some for the local airport.
When I try to put the freq's in to the scanner it gives me an E
indicating error. the freq's are 120.750, 126.900 132.700, and around
there. I can get other freq's that are in the 100's but I can't seem
to get these. Do I need to make some hardware changes or is it just a
problem with the scanner or model.

Please help

Chris,

For the most part, as far as I know, the air ambulances are using whatever frequencies the requesting fire department asks them to use. I know that Flight For Life McHenry (IL) uses 154.265 and 154.400. When we ask for them, they go to our fireground frequency 154.370.

Hope this helps.

Pat

The only problem with the IRC idea is that you would probably
get a channel devoted to the arguements of two little boys, which I
skip over in the newsgroup. But then again, I guess these children
can be kicked from the IRC. Maybe it would be worthwhile.

Wynnt,

My post in no way slandered Bill or accused him of anything yet he resorted to the same vitriolic name calling he uses on his "slanderers" in his reply to my post.

This response gave me a great deal of insight into his character and confirmed negitive opinions of him. My intent was to offer constructive criticism but Mr. Cheek doesn't seem to respond well to criticism in any form. Since schoolyard name calling bores me I have no intention of continuing in this "discussion".

Dano,

I agree with Michael, It is a huge problem. But I have a question for you.

How in the world can you hear a digital signal being transmitted on the
900 Mhz cordless telephone band? Analog is easy, however, YOU must have
some pretty high dollar equipment to decode binary (digital).

>--Michael J. Klein--
>NV1L

Agreed. As a city firefigter/EMT AND an avid scanner buff I know how easy it is to get some critical frequencies. (Remember the cheaper models don't always have a scan for new freqs feature.).

We have a resident arsonist who LIVES with a scanner in his back pocket and doesn't hide it. He likes to hear the dispatch and watch us go on a call - and he hears everything.

You can't actually JAM a freq- you can just scramble your own transmissions on which you operate. But, just like ALL cordless phones, cell phones, (800 and 900 Mhz) can be heard - buffs will always find a way of getting the skinny.

PS: Yes, those 800, 900 and new-model cordless telephones ARE jokes - I listen to them all the time... the poor suckers who paid $$$$$ so they could have privacy - geez.

Valentine One usually wins by a country mile.

Besides excellent filtering and sensitivity, it has arrows which tell you where the radar signals are coming from, and how many there are. That way you can spot the X-band radar transmitter hiding in the midst of all the X-band supermarket door openers.

There is also a model with laser detection as well.

Sheesh, a Valentine One is way too expensive. So what if it can tell
which way the radar is. It's not that much more sensitive (if at all)
than a Passport LCD and it's $400! It's stll worthless against Instant
On. Kick in another $200 and get a jammer.

Even if there were such a mod (I don't think there is), I don't think
it would work very well. The 2SRA is a VHF transciever and a wideband receiver.
That means the transciever section is tuned to transmit in the VHF band. Making
it transmit in the UHF band would result in a very large transmitted power loss
if anything is transmitted at all.

Man oh man, does that puppy ever go back in time! I believe that
sucker first hit the market in about 1976 or so. I've had several
over the years, and used to sell them in the early 80's. Might still
have one buried around here somewhere.

The Glen 326-G was quite the rage in its day, and I suppose STILL
could be quite the gadget for those who appreciate legend and history.

Ol' Doc Glen himself went to jail shortly after designing the 326-G.
Seems he was buying stolen chips from the Silicon Valley plants, and
the Sheriff got wind of it. So they set him up with a "buy" and
nailed 'im. He went to the slammer over the deal, but I don't know
for how long.

Glen made some great big bohunker linear amplifiers, too. I mean
BIG ones. Very, very BIG ones. Never got into trouble for those,
as far as I know.

Just a bit of nostalgia for ya.......

1722. Next DISPATCH Issue

Newsgroup: rec.radio.scanner
Date: 1996-01-21 00:00:00 UTC
From: garya27446@aol.com
Message-ID: <4dsp7h$h82@newsbf02.news.aol.com>
Source record: 242001

The next issue of DISPATCH Newsletter is being shipped to the printer shortly. Among other stories, it will cover:

-- When a Surry County (Virg.) mother called to report her 19 month-old was choking, something was wrong with the 911 system. The aftermath is nasty, as the sheriff refuses to release the logging tapes, the parents
grieve after the baby who died, and the local newspaper wants to know what happened.

-- The Emergency Broadcast System is on the way out. So what will replace "Had this been an actual emergency...", and will it really be able to turn on CD players to alert citizens?

-- California is allowing companies to provide local dial tone, but it's raised some substantial issues for 911. What's the problem, what is "number portability" and what solutions has Pacific Bell proposed to maintain the integrity of 911?

-- Psst! E-Systems is one of the country's biggest and most secret defense contractors. Now they've entered the public safety arena. DISPATCH explains what high-tech products they've converted from their defense arsenal.

-- Cellulars are the <not> the best solution for emergency incidents, says a public safety professional. He explains why other means of communications are better when the chips are down.

-- Oops! Portland's new 800 MHz radio system hiccuped for over 5 hours in December, and the city is upset. What are they doing to put the squeeze on Motorola to fix the problem?

-- OCS Technologies, Corp. reported their financial results for fiscal 1995--it's a real shocker!

-- Did you know that an Internet message got a dispatcher in hot water with his agency? Seems he/she posted some negative comments about CAD, which got back to his employer.

-- "Oh, we living here in Allentown, where they're closing all the factories down, " but they <do> have EMD, and very proud of it.

The radio shack car cell phone holder "Universal Phone Mount" works great
for holding a scanner. Costs too much at $39, but is *REAL* nice.
"Flex mount allows you to position your cellular phone in a convenient,
easy-to-reach location"

Source record: 242007
Cross-posted to: alt.radio.scanner,rec.radio.scanner

A while ago, I asked the newsgroup about the WEFAX III software demodulator. One of the responses that I got mentioned an air frequency I think it is ACARS... anti collision air radar system. I may be wrong with the acronym... I could search the air band, but I figure many of you out there know the freq, and could save me the trouble.

While I'm at it, I did buy the WEFAX kit, and it works well. Does anyone know any FAX/RTTY on scanner frequencies other than the ACARS mentioned above.

Thanks!!

Jeff C.

For Sale:

Glen 326-G Digital Controller manufactured by Glen Manufacturing in
Stockton, CA

<start: direct quote from the manual>

"Congratulations, you have just purchased a very unique and precision
instrument. This unit contains a VFO, Digital Computer, Frequency
Counter, and a 5 digit LED display. Its function is to generate a stable
variable frequency, compute and display the resultant transmit or receive
frequency.

Technical Specifictions:

VFO Frequency Range--7 to 25 MHz on fundamentals, 14 to 50 MHz on 2nd
harmonic.

Tuning Ratio---------10 : 1 vernier on Coarse, and Fine controls.
500 KHz may be tuned on any band.

High/Low switch------Shifts any selected frequency up 400 KHz,
allowing coverage of any band of 900 KHz.

Display--------------MC or KC gives a choice of either 1KHz, or .1KHz
resolution on display.

Accuracy-------------1KHz in MC position, .1KHz in KC position.

Counter Range--------5KHz to 50MHz, fully programable on 5 digits.
X1 or X2 multiplier for harmonics.

Power, Base model----117 Volts AC @ .1 Amps @ 60 Hz

Power, Mobile model--10 to 20 Volts DC negative or positive gnd.
Either lead may be reversed with out regard
to polarity.

Note:
Novice band, business band, or citizen band is not permitted the use of a
VFO to transmit with. Only crystal controlled transmissions are
authorized by the FCC on these bands.

If the purpose of the VFO is to monitor the various bands previously
mentioned, and a transceiver is used, then the transmitter should be
dis-abled or the microphone removed to prevent the psssibility of
transmitting.

From: NJFM83A@prodigy.com
Message-ID: <4dtm3l$22us@usenetw1.news.prodigy.com>
Source record: 242013

I've had a 2006 for 4 yr's now & has no hum. If the hum is present when the unit is off but plugged in, it's the P/S transformer, & using an external P/S is the easiest "fix". If the hum is noticed only when turned on, and stays the same at any audio level, you have a bad P/S filter, again, the easy fix is an ext P/S.

NOTE: Really From: zeet@olywa.net

Bill Cheek (bcheek@cts.com) wrote:
<snip>
: 16 Discrete components; minimal LSI

Big problem here - power consumption. Also, size might be a problem.

<snip>

: 19 Duplicate entry detector

Okay, one thing. It's nice, but sometimes a frequency is used for more
than one service - please let it have an override!

As a side point on that, there's a way to override it on the BC-2500XLT.
I own one, and was tired of the feature. However, if you enter the same
frequency (the duplicate one) twice on the same channel, it will disable
the duplicate detection for that one channel. Don't know if it's permenant,
but it sure does stick around.

<snip>

: 26 IF bandwidth; programmable: 5 kHz; 7.5 kHz; 10 kHz; 15 kHz; 25
: kHz;
: 50 kHz; 100 kHz; 200 kHz

One that you're missing - 30kHz. Needed for WeFAX.

: 27 Keyboard; affirmative action; large keys

Also - use a kind of rubber that's non-slip and durable! Don't want corners
of keys breaking off.

<snip>

: 31 Metering; Signal Level; analog; or 20-seg digital; am/nfm/wfm

How about a singal digit? That's ten settings - it could be S-units.

: 32 Mode settings; User selectable: AM; NFM; WFM; SSB

Yes! USB/LSB settable too - no BFO.

: 33 Multiple antenna ports; keyed to bandpass filter ranges;
: programmable

How about just a port to control one? Not every one would need that
feature. But if you were thinking of it, how about a handheld with two ports

- one for lowbands, one 800MHz. That way, you could use two antennas.

<snip>

Just my thoughts.

Source record: 242017

I need advice from you all on the best antenna for this situation. The apartment complex that I am moving to will not allow any masts or antennas on the roof, so what I hope to do is put up an antenna that is nearly invisible to the casual glance. It can only have a "straight-up" element (I do not know the correct term), and it must be as short as possible while still covering 450-470 and the 150's also. Since mobile antennas tend to be shorter, would this be a viable option? Plese let me know....Thanks!

I've been quietly reading this group for a few years, posted here and there, sent some mail as response to questions. Just your ordinary scanner kinda guy. I've bitten my tongue (ouch!) on several occations to keep from replying to Bill or Glen or any of the other combatants. Now I propose a new newsgroup. Let's very quietly start "rec.radio.scanner.really". If we do this right the flamebaiters won't notice and stay here. Then we can have a scanner newsgroup again. Waddya think?
Dusty (all in fun but flamesuit ready just in case) Van

A radar detector is a radio so it ok, I guess.

You didn't list the Passport LCD (I think it's the 5000). Very nice, good price. BeL's seem to false a lot.

1742. Re: AR8000 TIP Check Out PerCon Frequency Database Callsign & City Search

Newsgroup: rec.radio.scanner
Date: 1996-01-21 00:00:00 UTC

Toan:

When you refer to 480 MHZ, are you referring to the 480-489 range? If so here's what I found by running the PerCon Website Search using Los Angeles as the City and PP as the RS. There might be more transmitters in other citys.

This unit is in mint condition, still under warranty and has had very little use. It gets the full radio spectrum from 100kHz to 2036 Mhz -- absolutely NO gaps. This is the Rolls Royce of communications receivers, and if you need details about what it can do, it's probably out of your league. But for the afficianado this is THE one! Comes with all incuded accessories, box, manual, etc etc. And of course there are computer interfaces and software to make it do all kinds of tricks. $1000 plus shipping. I'm in the Washington, D.C., area.

1745. Pro-43 Newbie Question

Newsgroup: rec.radio.scanner
Date: 1996-01-21 00:00:00 UTC
From: vfinley@icon.net
Message-ID: <vfinley-2101961204140001@okc142.icon.net>
Source record: 242024

My pro-43 can be programmed to check a designated priority channel every two seconds for activity, and stay on that channel if there is activity. Problem is when this feature is turned on during scanning it causes the display to blink every two seconds. There is also a very brief interruption in the signal received each time the display blinks. It sounds a little like someone repeatedly keying a mike at two second intervals. Is this normal, or is my scanner defective?

Thanks,
Virgil Finley
Oklahoma City, OK

wa6sul@ix.netcom.com (gg) unloaded as follows:

> Sorry you are so offended by the truth.

What "truth"? Do tell exactly what you mean, Clingberry.
I never take offense at TRUTH. As far as you calling me
"biased", that merely opens the door to serious questions
of your ancestry and the reptile family from which your
genes sprang not four or five generations back.

> But that is the way it is.

There is nothing "the way it is". Your great big antenna
being a prosthetic device for a dimunitive member of your
anatomy may be the way it is....but that's about it.

> All the extra expletives dont strengthen your cause wahtsoever.

What "cause" are we speaking of here? Your reptilian
ancestry? Hell, that case is made in the shade. You made it.

> Be that as it may, you get what you pay for...

Sure you do. So do you have an ICOM R-9000 by any chance?
Well, why not? What kind of car do you drive? A Rolls-Royce?
Why not? You GET what you pay for, Ignats.

Well, maybe...just maybe the gentleman interested in the Create
antenna might not have the budget for BOTH the expensive antenna
AND the expensive installation required to keep it in the air.
Furthermore, Ignats, he might have neighbors who would object
to the Create antenna but would accept a harmless TV antenna.

There are MANY reasons why the gentleman would like to know
about using a TV antenna as a directional beam for a scanner.
None of these reasons are especially directed at the absolute best
antenna, which can be determined only on a test range or after a
round of serious testing and evaluation. Rather, these reasons
have to do with what might be the BEST antenna for HIM and his
situation. You can't judge that; neither can I. Only he can,
but then only after a serious look at ALL the alternatives and
options. TV antennas make VERY GOOD scanner antennas anyway,
no matter whether they are "the best" or not.

You don't have the "best" radio and car around, so don't lay
that shit on me about "you get what you pay for." You get what
you can afford, and that's all there is to it.

> I doubt that all the commercial outfits that decide to go professional
> with professional installations throw their money away with some
> individual's opinions about TV antennas being better!. Do what you
> want, but technology will hold it's own.

Are you one of those Adam Henries who can't read? I didn't SAY
TV antennas were better than the CREATE.....but they might be.
You and your prosthetic pecker can't determine that anyway.

I'll say this much for you: you sure don't need a prosthetic mouth.

ACARS stands for ARINC (Aeronautical Radio Inc.) Communications and Reporting System. It is used for sending messages, flight plans, engine operating data, etc. to and from the aircraft. Try listening on 131.65 MHz. There are several types. Some run at 4800 baud and some at 9600 baud. Good luck!

1759. TV Secondary Audio Programming (SAP)

Newsgroup: rec.radio.scanner
Date: 1996-01-22 00:00:00 UTC
From: bmm1@freenet3.scri.fsu.edu
Message-ID: <4e1dke$ng5@freenet3.scri.fsu.edu>
Source record: 241838

Our local PBS television station transmits programming on the secondary audio programming channel that is usually unrelated to the video programming (during prime time it may be additional descriptions for the `visually impaired', TV for the blind, what a concept). I canreceive this (very informative) programming with the SAP switch on a VCR that I have. The TV channel is 15. The SAP audio seems to be narrow FM at 481.66. However it is imbedded in the wide band FM primary audio programming making unlistenable (two audio at once). I suspect the SAP receiver subtracts the wide band audio from the narrow band audio to get clear SAP.

So my questions are, does anyone know exactly how this works, does anyone have any suggestions on how to get clear SAP on a scanner and since I don't think this is possible does anyone know of a SAP audio receiver available on the market?

Thanks
Bruce.

The "DX" version allows the narower SSB filters to be used
when listening in AM mode. The standard AM filter is around the 12KHz
mark - the SSB filter around 4KHz.

LAPD will not be fully digital for at least 5 years. They are slowly
phasing in digital equipment.

My experience with the Grove Pre5 is that it is more hype than
substance. I saw a glowing post about it in this newsgroup and sent
for one. With hindsight the article must have been posted by Bob
Grove.

1768. Re: Additional Memory BC300

Newsgroup: rec.radio.scanner

> I believe it was a matter of either replacing the ER1400 memory
>i.c. or adding another ER1400. Has anyone
>experimented with this or have a copy or the location of the article.

I've seen the article, but I don't recall in which magazine or
newsletter. The following info may help.

From my article, "Don't Junk that Old Bearcat BC-300":

"..... For memory, the BC-300
used EAROM (electronically alterable read only memory), so
backup batteries were not necessary. The Dog House, a radio
shop in Fairfax, Virginia, at one time offered the DH 1000,
a 1,000 channel adapter for the BC-300!..."

If you're going to bank switch ER1400s and need to buy more,
Chris Holmes (cholmes@portal.ca) recently found a source for
ER1400 chips:

"....There is a small electronics distribution company here in
Vancouver, BC that has about a hundred in stock. The company is Main
Electronics and the phone number is 604-872-0267.
The price is $10.04 (CDN) per piece with no minimum order requirement.

Rochester Electronics Distribution in Newbury Port also has
some ER1400ID (I don't know what the ID designator is) pieces
in stock at $5 US each, but they have a minimum order of $50.

ER1400 equivalent parts are the NTE2800 or ECG2800.
You might check local suppliers for those parts."

1771. Humming in earphone

Newsgroup: rec.radio.scanner
Date: 1996-01-22 00:00:00 UTC
From: gillespi@artsci.wustl.edu
Message-ID: <4e045m$79h@newsreader.wustl.edu>
Source record: 241850

I got my first scanner for Christmas, a Radio Shack PRO-50. (Pausing a moment while all the 'experts' and 'seasoned professionals' laugh.... But I live in a rural area and I only need to scan about 5 channels to hear everyrthing !)

I'm actually quite pleased with it. Especially since I put nicad batteries in it and carry it every where in the house with me. Since I live on a hilltop, reception with the rubber duck anywhere in the house is no problem.

When I'm listening with the earphone (another Radio Shack goodie), there is a constant humm as well as a low level static hiss. If I hold the radio up to my ear without the earphone plugged in I can faitly hear these same noises. (Which leads me to believe they are generated in the radio and not due to a lousy earphone, but the earphone may be worsinging their effect.)

Does anyone know of any mods for the earphone that might eliminate (or lessen) these noises?

Thanks much,

Mark (the spouse...)

I did the same thing you did except I used a splitter that Radio Shack sells. It has two Female Motorola plugs and one male. I plug in the lead from the antenna, a coax jumper to the scanner, and then my broadcast band radio.

I have used it for two years now. It doesn't work as good as a tuned antenna (especially on 800 mhz TRS) but it works fine for what I want it to do.

All your windsock rhetoric sounds like BS to me and prblably everyone else who also realizes that a log periodic is broad banded in its response. A TV antenna is nothing more than a glorified dipole with an attempt to widen tha frequency response with additional dipoles at best. You have some good points if you can specify the frequencies you are interested in monitoring in advance and constructing the TV ANTENNA to match. But for general broad-band response, the log periodic is unquestionably superior,(budget allowing). I think the decision has to be made on need vs. cost. But in the end you get what you pay for. (Also your bias against amateur radio operators is showing embarrassingly. May be you had a bad experience in your past?) I was only responding to the original question with my own opinions and experiences, and was not expecting to be flamed for it. Sorry if I treaded on your opinions.

>but I figure many of you out there know the freq, and could save me
>the trouble.

ACARS has nothing to do with anti-collision radar. It stands for Aircraft Communications Addressing and Reporting System. It is essentially an air-gnd computer link for exchanging routine reports and messages between aircraft and ground stations, i.e. information that was once relayed by voice. Thru a network of sensors on the aircraft ACARS automatically reports such things as the times of push back from the gate, take off, landing, gate arrival (known as OOOI for Out, Off, On and In), aircraft performance, fuel consumption, position, etc.

131.550 - primary ACARS freq for North America
130.025 - secondary ACARS freq for N.Am
129.125 - tertiary ACARS freq for the US
131.475 - ACARS freq for Air Canada
131.725 - primary ACARS freq for Europe

Check with Durham Radio Sales and Service. They are still selling brand new, in the box Pro-2006's and Pro-43's as well as other good stuff. I got my Pro-2006 from them and I've been quite satisfied.

They have a Web site at <http://durhamnet.com/durham/> or you can call them at 905-436-2100.

1785. POCSAG Paging Decoder Release

Newsgroup: rec.radio.scanner
Date: 1996-01-22 00:00:00 UTC
From: Pete Baston <pete@bearnet.demon.co.uk>
Message-ID: <isfKkBAVMBBxEwi0@bearnet.demon.co.uk>
Source record: 241864
Cross-posted to: alt.radio.scanner.uk,alt.radio.scanner,rec.radio.scanner

```
PD (POCSAG Decoder) Version 2.00
--------------------------------

**** Announcing the release of PD version 2.00. ****

PD is an MS-DOS program for decoding POCSAG paging transmissions on an
IBM PC or equivalent, 80286 processor or later.

PD requires a simple interface between the audio output of a scanner or
receiver and a COM port on the PC. This is described in the documentation
file.

The following are some of the many improvements over Version 1.02:

* Now supports 2400 baud and has auto bit-rate detection.
* Will now attempt to correct up to 2 bit errors in a codeword.
* Will now attempt to auto-detect numeric or alphanumeric data.
* Now supports logging of all messages to daily log files.
* Logging now continues whilst in PAUSE mode.
* PAGERS.INI and REJECT.INI will now allow comments after pager addresses.
* PAGERS.INI and REJECT.INI will now allow wildcards in pager addresses.
* PAGERS.INI and REJECT.INI will now accept up to 250 entries each.
* Date format may now be configured for the US market.
* Will now correctly display "umlaute" characters used in German.
* Screen colours may now be configured.

PD is distributed as shareware. The shareware version has a 5 - minute
timeout and does not log to disk. The full version is available from the
author on payment of a registration fee.

PD is available by ftp from the following site:

ftp.demon.co.uk /pub/ham/scanners/pd-200.zip

Source record: 241867

Off the top of my head...

GOOD:

- Wide coverage 50kHz - 1950MHz, no gaps except for US (cellular).
- AM, NFM, WFM, CW, USB/LSB
- Alphanumeric tags for each channel and scan bank
- 1000 channels in 50 banks
- 20 scan banks
- Total control over freq step
- Nice search and store features
- Full computer control, upload/download of freq and etc. data
(with this, can restore cellular, but need computer, hardware
interface, and software or DOS "squirt" command to do it).
- Good user interface.
- Well lit keypad and LCD
- Decent audio for it's size
- Gobs of customizable scan and search features
- LCD S-meter
- Relatively light-weight
- Just about no kind of scanning or radio listening that this
radio will not do for you (except wierd stuff like digital
encrypted signals and trunk following, no scanners do that).
- For search banks, can lock out specific frequencies from
the search range. Good for ignoring birdies.
- Audio scan - stops only on freqs that have audio (bypasses
dead carriers and most noise, and birdies).
- Select Scan - pick from amongst your frequencies for a quick-and
-dirty scan list on short notice. Very easy to do.

BAD:

- Eats batteries (my nicads last 4-5 hours tops)
- LCD, although very informative, has restricted view angle.
- Computer port is in wierd location (under battery case cover).
- On some models the keypad ink wears off (get the plastic case!)
- Stock antenna is like a wet carrot. I got a Diamond RH70CA.
- A little less than convenient charging circuit (batts get warm
when using car adapter, have to monitor charging time yourself).
- Can be intimidating for first time user to learn. After all,
it's like learning a computer. I have scanned for years and
it took a while for me to pick up all the nifty stuff this
thing does. Once you learn it though, you are golden. Should
take the time to learn the radio or you will become disenchanted
with it.

- Some complain of a wandering birdie. I have not seen this.
- Scan rate is NOT 30ch/sec, but on average more like 12-20.
Depends on how you have frequencies organized and what the
PLL and squelch lock are set to.

Hope it helps.

Mike

Hello Jim,

I just purchased the Uniden 6399 last week and have been very happy with it so far. It has all of the latest features including 360 degree laser and "road hazard detection". I got mine from Radar City on the net for under $100.

Good luck,

Ray

I recently picked up a used SC150 Uniden SportCat, and was wondering if there were any mods avaliable. If so could someone either mail them to me or let me know where they could be obtained. Thanks
Mark

1792. Car antena as scanner antena HELP PLEASE

Newsgroup: rec.radio.scanner
Date: 1996-01-22 00:00:00 UTC
From: tbrusoe@ix.netcom.com
Message-ID: <4e0ude$hdv@ixnews8.ix.netcom.com>
Source record: 241871

Hello, Iam currently using my car ant. for may scanner (works Great)
but there is a small problem. When the ant is pluged into the scanner I
lose about 80% of the radio signal. What I did was splice one set of
wires to the scanner and one set to the radio from the ant. Is there
somthing out there I can buy or make that will make the loss in the
radio go away.

Please reply via e-mail or post here

e-mail tbrusoe@ix.netcom.com

Thank you in advance.

Bill/Others/Anyone

I posted follow-ups to the "Technology Forum" last week on both
alt.radio.scanner and rec.radio.scanner that don't appear to have
been read. Can someone verify that they really got posted on
the net, and not just my local server?

Thanks,

Martin Jones

1795. Static suppressor?

Newsgroup: rec.radio.scanner
Date: 1996-01-22 00:00:00 UTC
From: Chip Seymour <cseymour@mitre.org>
Message-ID: <4e07u5$gqm@linus.mitre.org>
Source record: 241899

What's good for reducing engine noise in a scanner?

Symptoms: reduced sensitivity/increased static when the engine is running (not alternator whine), disappears when the antenna is disconnected.

chip

Mine hums too. I solved most of the problem by setting it on 1/4"
felt pads. It still hums, but the noise isn't transmitted to the
shelf it sits on, making it a lot quieter.

1802. FS: Standard C568A Cell Restored!!

Newsgroup: rec.radio.scanner
Date: 1996-01-22 00:00:00 UTC
From: scam@siu.edu
Message-ID: <scam-2201960326010001@port171.aixdialin.siu.edu>
Source record: 241906

OK, The guy that had agreed to buy this rig has decided that maybe he
can't, so it's for sale again.
I've got a Standard C568A 144/440mhz (with low power 1.2ghz) dual band HT
for sale. It'll receive from 110-190mhz, 310-490mhz, 800-980mhz (no gaps!)
and 1.2-1.3ghz. It's been modded to transmit from 125-185mhz, 400-480mhz
and 1.2-1.3ghz. It is in perfect shape and along with all of the original
packaging, manuals and wall charger, it comes with an extra CNB171 nicad,
the CMU161 200 channel memory chip, the CLC560 soft case and CMP113 tie
clip speaker/mic. All of the accessories also have the original packaging.
I'd like $500.00 or the best offer nearest that. Please reply via e-mail
to the address in my sig. Thanks!
73,
Scott

> MOD.... and is the MOD like that used on the PRO-51 ?

Date Codes are not neccessarly (sp?) the best way to say "yay" or "nay".
The definative way to check is look at the FCC ID number on the back. In the
US (& Canada ?) The modifiable PRO-43's have the FCC ID of AA020-300.
The non modifiable PRO-43's have the FCC ID of AA020-300A.

Outside N.A. PRO-43's continued to be available until recently. These
did not carry FCC ID's but were modifiable (if they did have FCC codes
it would have been AA020-300) and carried date codes as late as 7/95.

Dear Shima:
I have a Uniden Radar Detector and I find it to be suitable
against Police speed traps. "Both Lasar and Radar".
The Features of the unit are
1. Produces a low oscillator signature so Police
cannot pickup using Radar Detector Detectors.
2. Provides coverage in the area of 360 Degrees.
3. Provides all Wideband coverage from Radar to
Laser.
4. Laser detector is rated at 1.5miles detection
by Road/Track Magazine.

Programmable RF gain (Not just attenuators, programmable gain) to allow you to reduce the gain to the point that you can vary the gain in steps down to the point where you can be feet away from a 50 watt transmitter and still only get half scale on the S-meter. Small programmable gain would allow you to reduce intermod, and the very low gain would almost guarantee you a sale to every Amateur Radio transmitter hunter in the world.

The transmitter hunter problem is that when you are hunting a transmitter with a beam antenna, when you get close, you get full scale readings in all directions. You use attenuators to reduce the signal strength as you get closer, but you often reach a practical maximum attenuation before you find the transmitter.

If you had a scanner that included continuously variable gain over a very wide range, you would elminate the need for a seperate attenuator and it would work better, too. It shouldn't be too hard to generate a variable RF gain by working with the RF stages, or even by varying the IF mixers. At some point attenuators stop working because the signal is so strong that the radio itself picks up the signal without attenuators.

Transmitter hunting is a fairly large and growing sport in the US and abroad.

The Honolulu System is not a Motorola System Like Portland or Seattle. It's an Ericsson EDACS system. As we speak right now, its still going to extensive testing.

The current delay is funding. The City & County of Honolulu, Needs the final Three Million dollars from the State Gov to finish up by purchasing the portable radios. This money was committed by the Gov of Hawaii, but since our financial condition changed, the Gov decided to cancel his final phase funding.

Several years ago there was an article in a radio magazine to modify the Bearcat 300 and BC250 scanners to increase memory size. I believe it was a matter of either replacing the ER1400 memory i.c. or adding another ER1400. Has anyone experimented with this or have a copy or the location of the article.

thanks

>entity.
>
Perhaps "memory" is the wrong term. There is definately a problem with constantly using a ni-cad and then giving it a full charge before it has been used and completely run down. In other words, there are some rules you have to follow when using Ni-cads in order to promote long life. I've been using Ni-cads in radios for over 15 years now and in my experience, the longest life is attainable when the batteries are used, and discharged
and then properly recharged. Once in a while it doesnt seem to matter if you charge a battery that is half dead...you just cant make a habit out of it. I think this is what many refer to when they talk about nicad "memory" effect.

1823. Re: Vote here in Favour of Bill Cheek.

Newsgroup: rec.radio.scanner
Date: 1996-01-22 00:00:00 UTC
From: cv282@FreeNet.Carleton.CA
Message-ID: <DLKLCG.DGF@freenet.carleton.ca>
Source record: 241927

If you are reading this, please take a deep breath...turn off the computer... and get a life. Perhaps you spend too much time online. When I read this newsgroup I like to actually read something useful about the subject. There are many other places on here where time can be wasted. Of course for some it's not a waste of time, but pure obsession. I do like to read much of what Mr.Cheek writes, I don't know what happened to upset so many people, but I'm sure the insults would get to their destination just as fast via direct E-mail.

It helps alot as far as what to look for when in flight and on unicom freqs,
But I really am trying to find the dispatch channel I had it but they switched and I havn't found the new one, been looking for about 1/2 year to no luck!!!
thanks,
chris

I guess I'll have to try and see if they give it on the air to the FD.

>800-386-2724 310-839-5178 fax
>Los Angeles, San Diego
>http://users.aol.com/config/index.html

The problem with this is that it will force valuable police resources into tracking down whether you have commited real crimes or are just pretending to.

There have been numerous crimes stopped and numerous crimes uncovered by citizens listening to scanners. In one celebrated case, a next-door neigbor heard her next-door neighbor plotting to kill her husband. Thankfully, as a result of the neighbor going to the police, the hit man and the wife were arrested. So, bearing that in mind, any cop worth his salt will investigate any citizen's reports of "dead bodies" in trunks, and "50 kilos" of cocaine stashed in some club. By forcing public agencies to investigate your "non-exsistent" crimes, you're pulling them away from doin' their jobs tracking down and preventing real crimes.

Mr Ed

>APPREACTED.
>
>THANKS
>JEFF
>JEFF211@IX.NETCOM.COM

sorry Jeff, but that's not possible.

If you ever take the radio apart, you'll see a 2 meter transciever and
a wideband reciever in there...nothing to transmit with for 440.

Kev

1828. Re: Log Periodic Ant

Newsgroup: rec.radio.scanner
Date: 1996-01-22 00:00:00 UTC
From: bcheek@cts.com
Message-ID: <4dvlp5$6kv@news2.cts.com>
Source record: 241932
Cross-posted to: alt.radio.scanner,rec.radio.scanner

wa6sul@ix.netcom.com (gg) unloaded as follows:

> Sorry you are so offended by the truth.

What "truth"? Do tell exactly what you mean, Clingberry.
I never take offense at TRUTH. As far as you calling me
"biased", that merely opens the door to serious questions
of your ancestry and the reptile family from which your
genes sprang not four or five generations back.

> But that is the way it is.

There is nothing "the way it is". Your great big antenna
being a prosthetic device for a dimunitive member of your
anatomy may be the way it is....but that's about it.

> All the extra expletives dont strengthen your cause wahtsoever.

What "cause" are we speaking of here? Your reptilian
ancestry? Hell, that case is made in the shade. You made it.

> Be that as it may, you get what you pay for...

Sure you do. So do you have an ICOM R-9000 by any chance?
Well, why not? What kind of car do you drive? A Rolls-Royce?
Why not? You GET what you pay for, Ignats.

Well, maybe...just maybe the gentleman interested in the Create
antenna might not have the budget for BOTH the expensive antenna
AND the expensive installation required to keep it in the air.
Furthermore, Ignats, he might have neighbors who would object
to the Create antenna but would accept a harmless TV antenna.

There are MANY reasons why the gentleman would like to know
about using a TV antenna as a directional beam for a scanner.
None of these reasons are especially directed at the absolute best
antenna, which can be determined only on a test range or after a
round of serious testing and evaluation. Rather, these reasons
have to do with what might be the BEST antenna for HIM and his
situation. You can't judge that; neither can I. Only he can,
but then only after a serious look at ALL the alternatives and
options. TV antennas make VERY GOOD scanner antennas anyway,
no matter whether they are "the best" or not.

You don't have the "best" radio and car around, so don't lay
that shit on me about "you get what you pay for." You get what
you can afford, and that's all there is to it.

> I doubt that all the commercial outfits that decide to go professional
> with professional installations throw their money away with some
> individual's opinions about TV antennas being better!. Do what you
> want, but technology will hold it's own.

Are you one of those Adam Henries who can't read? I didn't SAY
TV antennas were better than the CREATE.....but they might be.
You and your prosthetic pecker can't determine that anyway.

I'll say this much for you: you sure don't need a prosthetic mouth.

4395 USN tracking net type activity USB stations using single or two letter alpha callsigns. Heard mention of "launch", "event 8", & "recovery in progress". (EG) [Jim Conrad later posted info that these comms are all related to Navy Aircraft Carrier Flight Operations. Launch is the term used to indicate the departure of a/c from the carrier. Each "cycle" (the complete launch of one group of a/c & the return of a previous group) has an "event number" associated with it. The phrase "recovery in progress" indicates that the carrier was recovering a group of a/c back aboard. Comms were most likely from JTFEX being conducted off the east coast w/the USS George Washington (CVN-73) Battle Group. -RD]
4469 KGA351, CAP Florida wing 0130 USB w/Sparrow 236 holding roll call. (RM)
4721 IDR: 2215 USB unid broken-EE OMs w/ rdo ck "Sierra Two Hotel this is India Delta Romeo" At 2228 "India Delta Romeo this is Six Quebec Yankey" Also hrd: "Fox One Bravo" (F1B), "Zero Yankey Quebec" (0YQ). (PS) [CanForces ch.G20 best bet, but USAF/AFSOC/MYSTIC, & Italian Navy has also been logged here -RD]
4739 Probable USN net 2312 USB w/P6Z, Blue Star, Super 15, & Wafer 755, sounds very similar to 8971 often complete with ticking. (SF)
4741 NIGHTWATCH 1231 USB wkg APPRAISAL, will monitor as primary until better freq is found. (EC1)

Subject: kHz Scanners

(Continued from previous message)

pp Dover Billeting & Dover Transportation v/MacDill; stated EC-135 a/c ... last three of tail # are 518. ADMP 1406 USB pp RAIDER v/Andrews, posn reported near Ft. Lauderdale. SHARK 61 2238 USB pp LOBO, Howard Metro v/Albrook; a/c asked that GREEN CLOVER be notified of 2335Z ETA Howard; this is a new program designator (?) for me. AGAR 29 0227 USB wkg Ascension, presently 533 miles to E of Ascension, ETA 0331Z; was told that AGAR 26 will hold for 29's arrival. Per WUN list, these a/c would be in support of a Titan launch of a Galaxy III comsat from KSC earlier this evening. BRAZILIAN AF 2466 1913 USB clg Andrews, no joy. SHADOW 12 0201 USB pp COYOTE OPS (58th SOW, Kirtland) at DSN 246-0143 v/ Offutt. Asked COYOTE to contact MOCCASIN 02 & ask if they could move ARCT at south end of 117 up to 1930Z (??); aborted low level sortie due to wx. Note that the COYOTE & MOCCASIN ## (58th SOW helos) calls have been in use for at least 1.5 years now; definitely static. SHADOW ## is AFSOC HC-130N/P COMBAT SHADOW a/c. FUZZY 93 1411 USB pp DSN 238-2468/2470 Niagara Falls, NY v/Offutt; answered as FUZZY OPS. This is apparently static call for C-130H a/c of AFRES 914th AW, Niagara Falls, NY. PAT 936 1633 USB pp DSN 936-5261 Cheyenne, WY v/ Offutt, no joy. This is first of these US Army Learjets I have heard in months. PLUG 31 2010 USB pp DSN 875-6701 "SPECTRE OPS at Duke Field" v/ Offutt, the YL at -6701 IDed as SANDCASTLE OPS, revised ETA 2100Z due to favorable winds; call Customs at Eglin to meet us; bunch of maintenance people onboard; will need two crew buses. This would be an MC-130 or HC-130; you can barely walk around inside cargo bay of AC-130 gunships. META 51 2025 USB pp 1-800-242-2694 Wilmington Sec. Police v/Offutt. Asked SP to transfer him to Greater Wilmington tower at 322-4270, pp interrupted numerous times by EAMs. Heard this a/c several times today; evident that it is C-130 a/c from 142d AS/166th AG, Delaware ANG; pilot gave his squadron as "142d" once. (RJL) IFO 81 0221 USB attempting to get a pp via Ascension to a location in italy. Ascension seems to be having difficulty ID'ing pp target. (RR) RAID 45 0059 USB looking for tfc from Ascension. EARL 29 0106 USB calls McClellan for p/p to Mt. Home AFB. Wants ASR [Air Surveillance Radar?] training so co-pilot can upgrade to a/c commander. Using and coordinating through Mt. Home AFB OPS (Idaho, USA), Will return to Fairchild AFB, Washington. [this cud be PEARL -RD] DARK 44 2327 USB at 3430N/10430W at FL 250. Provides info to Dyess AFB, Texas. DARK 44 probably B-1B. (TR) HOOIE 70 2019 USB w/pp via Andrews GHFS to Andrews Base Ops. 70 adv Base Ops that HOOIE 70 was a C-137 with a 2115Z ETA, & req 80,000lbs fuel, loaded from two

fuel trucks simultaneously (!), fleet service, 75lbs wet ice, 400lbs dry ice, baggage conveyor, air stairs, & wanted a 2-hour quick turn. Andrews Base Ops adv they will give HOOIE 70 a parking spot when they called in 30 minutes out on UHF. Patch terminated at 2024Z. Probably a C-137 assigned to either SOCOM or SOUTHCOM. SAM 375 2027 USB contacted Offutt & requested a discrete freq. Offutt suggested 11181USB, but SAM 375 req one a few MHz away from 11MHz. Offutt said to try them on 3113! C-20H #92-0375. SLAM 91 2032 USB w/pp to DSN 635-5230 via Offutt GHFS. Number was busy, so SLAM 91 suggested Offutt try ext. 4893, pp to 5th SF (5th Special Forces Group, Ft. Campbell KY) initiated at 2036Z. 91 adv they were an inbound C-141 w/2115Z ETA at Campbell AAF, & would need 50,000lbs of fuel & crew transportation to billeting. PINCH 87 2132 USB w/pp via Elmendorf GHFS to DSN 579-7774. PINCH 79 adv Hurlburt CP that 87 had a maintenance delay at KPOB (Pope AFB), had a 1645L ETA at Hurlburt, & would be maint. status A-3 for System 72 Oscar. Next made a pp to Hurlburt Metro for a 1645L forecast. SIROCCO (USS Sirocco, PC-6) 2108 USB w/pp via Ascension GHFS to a DSN 564 (USN, Norfolk VA) number. Sirocco adv Fleet Relay that Sirocco needed QSLs for several msgs sent via Primary ship to shore, Northern Net (probably SATCOM). It took the guys at Fleet Relay about 10 minutes to find some of the msgs & QSL them. Sirocco adv Fleet Relay to send QSLs to NAU for transmission to Sirocco via the Southern Net, because Sirocco was having LMUL problems & thus not receiving the Northern Net well. 170 Cyclone class coastal patrol vessel. SHARK 27 2135 USB w/pp to LOBO via Offutt GHFS. 27 advised LOBO they had departed last location at 2042Z, & had a 2300Z ETA at Howard. LOBO req SHARK 27s current location, & SHARK 27 adv 05-19 North, 075-22W. Patch terminated at 2137. SHARK 27 was exactly 2593 miles away from my receiving location, on a bearing of 173. SOUZA 62 1937 USB w/pp to DSN 564-1305 via MacDill. 62 advised BLACKHAWK CONTROL that SOUZA 62 had 40,000lbs fuel, and would be staying up until Bingo point, & req that BLACKHAWK CONTROL (VP unit at NAS Norfolk) advise Maintenance of that. (TT)

11176 LONGHORN 27 1833 USB wkg Clg Incirlik on 11176. No contact. (HW)

AIRCRAFT 490 2115 USB clg any station for a radio check. (This is about the fourth call in the past hour to use '76 instead of '75, but the only CS i was able to catch) (MD)

11178 PEMMB 1557 USB clg PEMM? (poss E). Stated "A message in Dutch" & then started talking in that language. (MD) [PE-MMB is a Dutch Navy Fokker F-27MPA (maritime patrol a/c) out of Curroco -RD]

11180 SAM 970 1433 USB wkg ANDY VIP (no joy). (JB)

11181 NANNY 99 2022 USB wkg Andrews, at 2026 authenticated securing from the net. (MJ)

11185 ADMO: 2111 USB USAV El Caney (LCU-2012), wkg Albrook GHFS w/pp RAIDER (Panama), re posn/status, cargo of 9 vehicles. (RB)

11199 Camspac wkg Xray 1 Echo on USB at 1752. Commsta Honolulu wkg X1E at 1743. X1E w posn rpt (2323.9N, 163.50W) to Commsta Honolulu. (RM) [first time I've seen a CG log here, 11199 is as 5693 & 8980 are to 5696 & 8983 -RD]

From your Electronic Editor:
* Welcome to First Anniversary issue of the single largest source of
utility station information in the world...the WUN Newsletter. At age 1
we are better than ever!

WHAT'S INSIDE:
o Membership News by Mike Wolfson

o International Civil Aero by Tony Orr & Peter Ivakitsch
o Ask WUN! by Colin Goodall
o Digital Review by Ary Boender
o The WUN Military Column by Jim Pogue
o Nautical News by Jim Pogue
o New Products and Reviews by R.D. Baker
o The QSL Report by Martin Barry
o Surfing the Longwaves by George Karayannopoulos
o Utility Round-up by Ary Boender
o Worldwide Bandscan by Tim Braun
o The WUN Logs Column by R.D. Baker & Tim Dobbins

It seems like yesterday that with the loss of the Speedx Club as a final straw, several of us ute folks started chatting by e-mail mourning our loss. It was about this same time that word leaked out that Popular Communications was going to drop Robert Margolis's 'RTTY' column. The utility folks were taking it hard on the chin!

For about a year, I had maintained a one-way mail alias, where I would send out any good snags I found, or that others sent me. Taking that idea and then an offer from Joel Bedard, who was on that ute e-mail alias list, and some pushing from Jim Pogue, Tim Braun, Jason Berri and Jim Navary...WUN was born. It was January 1995. Ary Boender, brand new to the internet world, was snagged as our digital guy. We found Tony Orr lurking in cyberspace and being very impressed with his international knowledge, we promised him large sums of money to write our aero column (yes Tony...we lied about the money). Mike Wolfson was brought in to originally do the 'Government and Other SSB News' catch all column, which died due to a lack of contributors. Mike went on to become our Membership Director (a fairly easy job when there are no dues to be charge!). Jason Berri, our former Speedx membership guy, came on as our official WUN Worldwide Web site coordinator. Jim Navary took two columns (Nautical News and QSL's); Jim Pogue took the Military column, Tim Braun brought his prior newsletter publishing experience to the table, and I took the Logs column and Review column (we ran out of volunteers!).

With Joel firing up the listserver the first Worldwide UTE News newsletter came out in February, 1995. Less than 50 days after the idea was stated! The first newsletter was 147k in size (this one is almost 1/2 meg!).

Other editors and staff came on board in the months ahead.

When Joel's 'phoque' listserver died, we could not find a 'free ride' and the membership came to the rescue donating funds to buy time on a commercial server. I had planned on printing the entire list of names here this month of those who donated. However, Tim Braun suffered a hard drive failure and about 7 or 8 of the names could not be read from the list. Rather than omit a few, I will just thank you all. You

ETA Porto Alegre 2050. FAB 2466 1900 USB dept. msg from Navegantes
ETA Alfonsos 2030 wkg Hermes R. w/other tfc (FLF)
9014 Air-to-Air comms 0046 USB plus some RAYMOND 7 activity. 'Something'
21 (or something one) 0026 USB wkg RAYMOND 07, getting wx. Also
activity at 0119z. RAYMOND 7 1658 USB wkg CHALICE BRAVO's MCC w/att
pp to 'RADAR MAINTENANCE'. As with most RAYMOND 7 pp's, this one was
not successful, and required operator relay. (Tail # 005; presumed
810005). SHAMU 20 2121 USB wkg RAYMOND 07 w/pp to DSN 527 number
(EDWARDS) - lots of pax and humvees. At 2157z, DRAGNET TANGO wkg
RAYMOND 07 w/unsuccessful pp activity. CHALICE BRAVO 1658 USB wkg
RAYMOND 07 w/unsuccessful pp to RADAR MAINTENANCE. Opr was mcc, &
tail number of a/c was "005" (presumed 810005.) GEMINI 85 2014 USB
wkg RAYMOND 07, getting info re CANNON AFB active runways. (JH)
9016 WISE 01: 2145 USB wkg Offutt GHFS w/pp to unid DSN. (RB)
9017 BLUESTONE (EAM initiator) 2129 USB wkg MAGNAVOX. BLUESTONE
simulcasting EAM on 9017 & 11244. NIGHTWATCH net 2038 USB
w/NIGHTWATCH 01 (male and female oprs); MEMORIZE (EAMs simulcast on
9017 & 11244); UNDERDOG; and SKEPTICAL. UNDERDOG has attempted to
move SKEPTICAL to CHARLIE BRAVO and CHARLIE ALPHA (6691.0) for ANDVT
comms. MEMORIZE 2001 USB simulcasting on 9017 & 11244, w/26-character
EAM, picked up by OFFUTT on the GHFS at 2003z. MEMORIZE then worked
UNDERDOG and SKEPTICAL. UNDERDOG seemed to be high up in the
pecking-order, as he seemed to handle some net housekeeping chores
when NIGHTWATCH 01 was not around. By 2036z, NIGHTWATCH 01 up again
in the net, w/female opr. NIGHTWATCH 01 2124 USB w/26-character EAM,
slightly trailing the GHFS. At 2153z, PARAMOUNT clg NIGHTWATCH 01
w/nothing heard, & then MOTIVATE working PARAMOUNT (both at good
levels here). NIGHTWATCH 01 immediately up on freq wkg PARAMOUNT with
ANDVT comms. At 2327z, WAR46 wkg NIGHTWATCH 01. WAR46 2023 USB wkg
NIGHTWATCH 01. BROWN RAT 1846 USB clg NIGHTWATCH 01 & responded to by
BILLY BOB. BROWN RAT with 26-character EAM at 1856z. (ANDREWS on
freq at 1859z). KNAPSACK 1447 USB wkg NIGHTWATCH 01 (male opr),

entering the net w/challenge process. At 1458z, KNAPSACK wkg NIGHTWATCH 01 (now female opr, and at strong level) with ANDVT comms. During this time period, sometimes KNAPSACK would be responded to by two oprs (the male and female opr) id'ing as NIGHTWATCH 01 at the same time, w/the male opr backing out. At 1634z, ORIGINATE (female opr, & very strong like the earlier NW01 opr) with EAM xmsns, trailing the GHFS, and then calling SUNBATH. WAR46 2303 USB clg NIGHTWATCH 01. At 2326z, TELEGRAM clg NIGHTWATCH 01, then 'any station this net.' FIREBUG 1608 USB wkg NIGHTWATCH 01, entering the net & being advised that RARE COIN is also in the net, 5700 secondary freq. RARE COIN 2023 USB wkg FIREBUG, exiting the net through the challenge process. NIGHTWATCH 01 lurking on freq. (JH) BLUESTONE 1800 USB clg NW, answered by WAR46 who said NW is monitor only at this time NIGHTWATCH 02 1625 USB wkg NW 01, NW 2 reported to NW 1 that they had just landed at Andrews at 1623. (MJ) NIGHTWATCH: 2204 USB wkg ROSEBOWL w/comm ck's, wondered if anyone was still up in the net. (RB)

9023 DARKSTAR MIKE 1705 USB w/AWACS training w/CRISCO, training re 'voicetel on HF, from context of comms, they are involved in an ALLIGATOR Playground. (JH)

9031 3MC (Nimrod) 1143 USB w/Architect re wx EKVG (Vagar, Faroer-Islands) + more. ASCOT 9290 (tanker) 1258 USB Architect calling, no joy. (BH)

9057 MANGROVE 1800 USB wkg NIGHTWATCH 01 in PARKHILL, plus exercise check on 'phoneline.' At 1816z NIGHTWATCH 01 clg DAIRYMAID, but only MANGROVE working DAIRYMAID. At 1820z, NW01 calls WAR46. At 1859z, MANGROVE calls NIGHTWATCH 01. At 1907z MANGROVE, simulcasting on 9057 & 8968 (11244 also at 2028z), w/26-character EAM (OFFUTT on GHFS at 1912z); & confirming same w/NIGHTWATCH 01 (now female opr). GOLD DIGGER 2032 USB ('rare' 10-character call) wkg MANGROVE; WAR46 up at 2033z clg NIGHTWATCH 01, stepping all over GOLDDIGGER. NIGHTWATCH 01 2110 USB wkg FIREBUG (EAM broadcaster); OUTFACE (phonetically spelled); & WAR46. Moved here from 9017, & using secondary freq of 11220 (plus attempted use of 17992 at 2103z+. FIREBUG worked MACDILL earlier in the local afternoon with voice & data on 15043. The MACDILL data transmissions had obvious telco noise artifacts on it's signal (sounds like some numbers xmsns after the voice part is over. NIGHTWATCH 01 2027 USB wkg FIREBUG after moving the net here from 9017. At 2030z, OUTFACE (phonetically spelled to NIGHTWATCH AT 2033z) entering the net with FIREBUG. NIGHTWATCH 01 wkg OUTFACE for a radio check at 2355z. (JH) NIGHTWATCH 01: 1602 USB wkg WAR46 w/comms ck on S309. (RB)

9122.5 USACE net 1504-1512 USB w/WUG, WUE4, WUN, WUO, WUH5, WUJ312, WUC5, & WUE6 all heard. Early end today w/holiday & few checking in. (DHM2)

USACE Friday net 1500 with following stations (& others) checking-in w/WUG/Vicksburg: WUK3 Sacramento District, WUI6 St. Worth District, WUJ2 Seattle District. (JP)

10596 IFO 10 (USAF IFOR Bosnia a/c) USB clg PROMENADE, Brindisi ALCE (Airlift Control Element), no joy. (BH)

10780 Cape Radio 0927 USB advising "3262" (I think that's it...) of a brief hold in countdown. (TT)

11059 SAM 203 2000 USB wkg Andy w/pp's. (MJ)
11111 REACH 60199 1434 USB wkg another a/c, pilot mentions that he's doing "this Bosnia thing" - interesting freq. (JB)

IFO 61 1606 USB Ascension (IFOR a/c, USAF) pp req., nr. busy/no answer. AMC a/c 70019 C-141B) 1140 USB Any (C-141B) ground maintenance radio check. NAVY 326 (EA-6 fm USS America?) 1150 USB w/Croughton pp 727-2540 (Rota): received nothing, believe it's an on-board the a/c crypto-problem, req call the carrier & tell them to come up on MGAD, have traffic to pass. Later MAGIC 56 (NATO NAEWF E-3A AWACS) checked in & asked if he could be of assistance: "We are in comms w/several US Navy ships", req he call "America": America relayed to come up UHF 368.9, 326 said he was unable, further comms via the ground station (Rota). I was under the impression the a/c was based at the America, as he referred to it as "our carrier" several times. I always wrote down "EP-3" when I heard someone clg this number, it now seems there are other players using it as well. QUID 11 (KC-135) 1247 USB clg Mainsail no joy. QUID 09 (KC-135) 1303 USB

Incirlik making all frequency call. SHUCK 48 (E-3) 1304 USB wkg Croughton w/pp Raymond 24 (Tinker Command Post, 552nd ACW): req. status on our tanker request, adv timing is good for second tanker, ETA 2230, cancel the fuel stop at Bangor. Reach 6ZZ 1255 USB wkg Croughton pp PMSV (probably Reach 266ZZ, heard 265ZZ & 270ZZ as well, the last on UHF). IFO 10 (USAF IFOR Bosnia a/c) USB wkg Croughton pp PHANTOM re a PPR nr. for Brindisi, then asked for a freq for Brindisi ALCE (Airlift Control Element): they were given two HF freqs: 10.596 & 14.511 for c/s "PROMENADE". I heard IFO 10 clg PROMENADE a few minutes later on 10.596, he got no answer. Anyone heard any tfc on these two before? (BH) ADMP 2121 USB wkg Offutt pp w/RAIDER at 313-283-3284 ADMP mentioned this DSN as in Panama. [RAIDER is 1097th Trans Co, Rodman Naval Sta, Panama, ADMP logged monthly -RD] ADMP 2140 USB wkg BAYONNE GLOAL, ADMP wanted to try 3284. (EC1) [3284 is a new one for me -RD] RESIDENCE 2353 USB wkg Elemendorf re: wkg freqs for station NIGHTWATCH. After a moment, Elmendorf replied that NIGHTWATCH would be monitor only for the next hour or a little more, & primary was X903, secondary X904. Cameraman 1945 USB wkg Nightwatch. (EG) IFO 67 2048 USB wkg Ascension pp. Rhein Main ACC: Reason for delay is heavy snow at LQTZ (Tuzla). ETA Rhein Main is 2230. REACH 68304 1845 USB wkg Croughton pp. EDAR PMSV. Req. wx for EDAR/2100z EGUN/2200z Pirep: 59.04n 12.30w. REACH 70025 0920 USB wkg Ascension Req. wx EDAR/1200 Pirep: C-141, FL330 45n15w. REACH 90022 0941 USB wkg Croughton pp Ramstein CP, inbound ETAR/1200z C-5, 76.000 lbs, 3 rolling stock, 73 pax, Quick turn to Lajes, crew rest at Lajes. Req. wx. ETAR arrival 1200z, departure 1600z, arrival Lajes 2100z Pirep:38.55n 42.58w FL310. (HW) BULL 78 1106 USB wkg RAMSTEIN OPS via CROUGHTON. TEAL 44 1447 USB pp MIAMI MONITOR via MACDILL (WC-130). SAM 970 1430 USB wkg ANDY VIP qsyed to F064 (11.214). SAM 970 1432 USB wkg ANDY VIP qsyed to 11.180. SAM 970 1434 USB wkg ANDY VIP qsyed to 6.715. IF 09 0811 USB wkg TAC CENTER via CROUGHTON Pilot gives airfield condition report from Tusla (must have been one of the first in). IF 012 1334 USB pp RAMSTEIN METRO via CROUGHTON (C-130). IF 082 0805 USB clg MAINSAIL - no joy. IF 048 1250 USB wkg INCIRLIK. IF 092 1250 USB pp RAMSEY(?) via INCIRLIK Pilot says he's inbound to DELTA. (Is RAMSEY a cp for the Bosnian operation or RAMSTEIN? I heard clearly as RAMSEY and the pilot repeated it several times). FLASH 13 1312 USB wkg TALON OPS via CROUGHTON pilot gives ETA and also warns that they are carrying live weapons. BH 4085 1316 USB wkg FRANFURT METRO via CROUGHTON. ADMP 0954 USB clg BAYONNE - no joy. BLUE 13 1124 USB wkg RAMSTEIN CP via CROUGHTON. He's leading 6 F-16s as part of a RETRO mission and wants to land them at RAF LEUCHERS, Ramstein tells him to try ETNN or RAF CONINGSBY instead. BOOKSHELF 63 1507 USB wkg ALLYCAT via CROUGHTON. VRB07 9999 FEW025 =" "VVV de MKL ZNB". (PS2) MKL: CFL 9 says
Pitreavie, Scotland 1012 CW meteo/wx then VVV DE MKL ZNB; went into
RTTY 1013. (RH) [as Ary pointed out several issues ago, CFL is
correct, MKL is RAF Pitreavie -RD]
11214 SAM 970 1431 USB wkg ANDY VIP (no joy). (JB)
11214 RAZOR 03 1709 USB wkg RAYMOND 24 on CHARLIE 6. VENUS 78 1550/1713 USB
wkg Raymond 24 (Tinker AFB), at 1550 Raymond 24 set up a pp with SAM
command. (JH) VENUS 78 1550 USB working Raymond 24 (Tinker AFB), at
1550 Raymond 24 set up a pp w/SAM command. (MJ) SENTRY 50: 2058 USB
USAF E-3 AWACS wkg RAYMOND 24 w/op's msg. (RB) SAM 049 & 683 1723 USB
pp SAM COMMAND v/Andrews VIP. Both a/c made arrangements w/Andrews
VIP to come up this freq at 2100Z to make comms arrangements for next
flight legs. At 2105Z, SAM 049 appeared to run pre-flight checks w/
Andrews VIP; was told to use F117 (6993) primary, ran checks there.
Also indicated two other a/c using F64 (6817). SAM 200 1902 USB pp
Fleet Service at Andrews v/ Andrews VIP on "64" to order trash bags,
Velamints, etc, ETA Andrews 3:45 PM. GONZO 04 2003 USB pp Scott AFB
Ops Av576-1861 v/ Trenton; passed ETA 2050Z w/ 10 crew; need 3000 lbs
jet fuel; stated they were a CANFORCE a/c from Winnipeg. Jeff
Haverlah & I spoke w/the crew of one of these (I can't recall the a/c
type) long-nosed radar & navigation trainers at the Randolph AFB
airshow back in May 1995. Trenton told the a/c to use 11232 pri/9007
sec. (RJL) GONZO 04 2009 USB w/pp via Trenton Military. Heard sign
off, 9007 was given as secondary. (RR)
11217 NIGHTWATCH 01: 1722 USB wkg MacDill, sounded like practice comms for
MacDill GHFS RO on Christmas Eve. (RB) AIREVAC 70004 1858 USB pp
Andrews Metro v/ Bayonne after QSY de 11175. (RJL)
11217 DOD CAPE 0931 USB space shuttle launch comms, DOD CAPE just advised
CLEARANCE 1, KING 1 & KING 3 that the launch is currently in a 3
minute hold, & then they'll commence a 5 minute countdown. (TT)
11220 SAM 27 1533 USB wkg ANDREWS w/pp to Langley AFB for wx ck (AD)
NIGHTWATCH 01 1618 USB wkg SHERLOCK. SAM 29000 1925 USB wkg ANDREWS,
w/suggested use of F917 (unk here.). 'something' (REDGULL or FRISCO
or somesuch) 2028 USB clg NIGHTWATCH 01; EAM xmsn at 2043z (on the
GHFS at 2045z). FIREBUG 1834 USB wkg NIGHTWATCH 01 in voice & data.
FIREBUG 2003 USB w/2 26-character EAMs, simulcasting on 9017
(primary, & clg NIGHTWATCH 01 and then calling RARE COIN, w/nothing
heard on 9017). (JH) AIR FORCE ONE 1816 USB wkg Andrews w/comm ck.
AF1 1942 USB wkg Andrews, req freq used by 28000..given 873. TOM
THUMB 1816 USB wkg NW01 to join net, NW gives other stations in net
& passes EAM to TT (DN35BR preamble). TORO 1825 USB wkg NW01 to join

net. BLUESTONE 1759 USB clg NIGHTWATCH. SAM 29000 1855 USB wkg Andrews w/multiple pp's. (MJ) TROUT 99: 1549 USB wkg Andrews w/comm cks. (RB) SAM 26000 1904 USB pp USAFE Metro v/ Andrews VIP on F311 after QSY de 11175 following p/p v/ Andrews Global to Andrews VIP. SAM 202 had jumped in the middle of 26000's p/p on 11175 kHz; Andrews VIP op was irritated and told 202 to go to F295 (11460) & STAY there! (RJL)
11226 Headdancer 0918 USB w/Lajes (EC-135K) pp V698-(?. control) req est t/o time for Blue 94: 1419Z. Tell them we'll be monitoring HF 6761. pp McConnel CP: req et t/o Blue 95: 1608Z, up on 6761. I was under the impression c/s Blue were tankers operating out of Mildenhall, seems not to be the case anymore. (BH) SAM 204 2035 USB wkg ANDREWS. ANDREWS 1900 USB wkg VENUS 78 & VENUS 79 w/various pp's. VENUS 78 1825 USB multiple pp's w/Andrews. VENUS 78 ID'ed as a C-135 enrt to Hunter Army Airfield eta 1930z w/20 pax on board. VENUS 78 1839 wkg ANDREWS w/pp to HUNTER OPS. Also on freq, VENUS 79 wkg ANDREWS. (JH) Andrews 1900 USB wkg VENUS 78 & VENUS 79. (JJ) Andrews 1853 USB wkg VENUS 78 & 79, can anyone ID this call? (MF2) [89th AW SAM a/c on training mission -RD] VENUS 78 1825 USB made multiple pp's w/Andrews. VENUS 78 ID'ed as C-135 enrt to Hunter Army Airfield eta 1930z w/20 pax on board. (MJ) VENUS 78: 2007 USB wkg Andrews w/pp SAM command re departed 2004, ETA in blocks 2138z. (RB) SAM 204 2050 USB pp SAM COMMAND v/Andrews VIP. LQA bursts heard here just after pp ended. (RJL)
11229 DAIRYMAID 2007 USB wkg NIGHTWATCH 01. At 2015 on 9057, DAIRYMAID goes through challenge process to exit the net with NIGHTWATCH 01. (JH)
11235 REACH 5024 0019 USB to RAAF Darwin w/wx for Alice Springs air port. This a/c is the weekly re supply of the Pine Gap "spy base" & is a C-141 or C-5 a/c. (SB)
11243 NIGHTHAWK 7 1655 USB w/in-the-clear and ANDVT comms w/one id'ing as VENUS 7 (or at least sounds like VENUS 7 - he's weak so it might not be VENUS; but it does involve '7'). VENUS 7 1644 USB w/very weak clear voice & ANDVT comms w/NIGHTHAWK 7. WUN lurker (thanks) advised that VENUS 70 also active at same time period on 6717 w/ANDREWS/SAM COMMAND stuff. (JH)
11244 Dizzy 99 1210 USB wkg ?. (JF) IAF 001 0717 USB att get wx info, worked ANDREWS here, QSY to 8968; worked ANDREWS; raised LAJES; & LAJES moved him to 6739. SAM 049 1725 USB wkg ANDREWS. MCCLELLAN 1327 USB as lead station with 131+/- character EAM: DN5NUH. Then at 1415, MCCLELLAN as lead station with 74+/- character EAM DNTZXN. OFFUTT 1506 USB as lead station w/heavy 30 minute EAM activity between 1500z/1530z: 1506z (20 characters); 1510z (FOR REGION CHARLIE - 20 characters); 1518z (20 characters); 1522z (26 characters). RAZOR 03 1704 USB wkg ANDREWS w/pp to RAYMOND 24, w/comms involving RAZOR 01. At 1706z, RAZOR 03 and RAYMOND 24 moved to CHARLIE SIX, where they tried to continue the conversation (11214). At 1715z, back up on 11244 w/pp to RAZOR 01 (excellent circuit). LOSTTIME 1756 USB wkg MACDILL, getting working freqs for NIGHTWATCH 01 (MACDILL said X903 & P301 - presumably P381); & placing a pp to DSN 339 number id'd as VQ4 OPCON w/immediate traffic of nine 3-element groups. OVERSLEEP

1850 USB calls MAINSAIL, raises MACDILL, pp is placed to common DSN
339 number (VQ4 OPCON) where the chatter involves BOOMTOWN and direct
comms with BOOMTOWN on CHARLIE ALPHA. OVERSLEEP completes the patch

1863. kHz Scanners 78/79

Newsgroup: rec.radio.scanner
Date: 1996-01-23 00:00:00 UTC
From: Roger_Cravens@fforum.blkcat.com
Message-ID: <NOMSGID_1=3A109=2F239.0_960123_205600_b03a777b@fidonet.org>
Source record: 241717

Subject: kHz Scanners

(Continued from previous message)

8605 Unid: 1118 USB tfc in CC dialect. Simplex Network. Can hear noise of engine in background on one of the stns. so evidently M/M. 1122 "BiBi Happy New Year" and then they all went QRT. (RH)
8976 Unid: 1144 LSB tfc in SS, sounds like a bulletin w/M/A. 2nd stn. much weaker.1147 QRT. (RH)
8988 Unid: 1137 USB tfc in SS. Male Ops. Ends queries w/Kapitan. Some overs end w/"cambio". They have rather raspy voices, some w/rather agitated tones. Female voice heard well down in QRN. (RH)
10493 WGY912 1603 USB wkg WGY910 w/comm ck. WGY918 1605 USB wkg WGY912 w/comm ck, WGY912 then calls numerous stations with no joy. WGY912 1616 USB wkg WGY918 w/comm ck QSY F34. WGY910 1700 USB wkg WGY 912...910 is shutting down operations due to high wind warning. They are turning antennas into the wind. 910 will keep one radio on freq for emergencies. LIMA ZERO FOXTROT 1703 USB wkg WGY912 w/comm ck. (MJ)
11099.9 Unid: 1055 USB tfc in JJ dialect as "Maru" mentioned several times. Very raspy voice. "Hai..Hai" Sounds like JJ but endings different. Korea mentioned twice but definitely not KK spoken. (RH)
11270 Unid 1126 USB man reading letters, very poor signal, hrd Juliet Golf Kilo, etc. (EW) [Russian Man Numbers Station -RD]
12168.8 Unid: 1159 LSB tfc in CC dialect. Both males. One op seems to have second rx running in background w/CW. (RH)
12216 WGY912 1622 USB wkg WGY918 to set up 4-wire (full duplex) circuit. 918 was to use F34 as rx & F50 as tx. It took a while to get the circuit in operation. 912 then had 918 patch a phone call onto the circuit w/mixed results. (MJ)
12885.6 UNID: GULF WEATHER??? 1920 CW w/ID. (AE)
14650 Unid: 0945 LSB tfc in either JJ/KK, QSO starts off with singing then going into speech, unusual QSO. Can copy only one side of QSO. (RH)
14890 Unid: 1024 USB Numbers in unid lang. (EW)
15016 Unid: 0857 USB tfc in UNID Asian language, one male & one young person. Simplex. Could possibly be Indochinese LL. Male op is stronger while pronounced QSB on younger person, cannot tell if male or female. Could be family communicating. Finally QRT 0915. (RH)
15708 WGY 918 1627 USB transmitting above to 912. (MJ)
16230 Unid: 0918 USB telephone call in unid lang. (EW)
16270 Unid: 0916 USB telephone call in unid lang, poss Chinese. (EW)
16282 Unid: 0913 USB telephone call in SS, (EW)
16332 SLHFB [C] 0944 CW Single letter [C] HF beacon. (DW)
16615 Unid USB 0740 greek stn having pp, switched to 16605 at 0746 (AW)
18000 Unid: 1105 USB YL rpts three words, too weak to ID. (EW) [Nancy Adam

Susan Numbers station w/1100 sked to BEC -RD]
19631.3 Unid: 0841 CW 5LG's then VRQ VRQ DE ZNN. (EW)
20414.4 Unid: 0735 CW encrypted. (EW)

1865. The Russians Are Here!!!

Newsgroup: rec.radio.scanner
Date: 1996-01-23 00:00:00 UTC
From: Roger_Cravens@fforum.blkcat.com
Message-ID: <NOMSGID_1=3A109=2F239.0_960123_220700_0b0350b4@fidonet.org>
Source record: 241719

This message was originally addressed to ALL
and a carbon copy was sent to you.

Hey all, I sent this out last October - anyone from Missouri or Kansas drive over to Fort Riley/Junction City/Manhattan, Kansas and check this out?

Would much appreciate what you heard (and frequencies) if you did!

Roger
++
++
This message was from ROGER CRAVENS to ALL
and was forwarded to you by ROGER D. CRAVENS

I send this along not as a political statement, but to those in or around the Kansas towns of: Fort Riley, Junction City, or Manhattan. This should make scanner listening quite an exciting experience during this exercise.

If anyone around there reads this, let us know what ya hear and on what frequencies.

Roger "Fed Hunter" Cravens

Subject: Russians coming to Ft. Riley

To: fap@world.std.com
From: eplurib@first.megalinx.net (Helen Johnson)

Good grief!!! When's this crap gonna stop?!?!
==========
WASHINGTON, Oct 10 (Reuter) - Russia will send 250 army soldiers to Fort Riley, Kansas, on October 23 for two weeks of joint peacekeeping exercises with 250 U.S. soldiers, the U.S. Defence Department said on Tuesday.

The bilateral ``Peacekeeper 95'' exercise will be held in the spirit of NATO's ``Partnership for Peace'' program to draw former Cold War foes closer to the Western alliance, Pentagon spokesman Ken Bacon told reporters.

He said final agreement on the exercise was reached at a meeting in Geneva on Sunday between Defence Secretary William Perry and Russian Defence Minister Pavel Grachev.

``The troops will practice such peacekeeping duties as checkpoint operation, conducting patrols, reacting to civil disturbances, escorting convoys, land mine awareness and conducting air movement operations,'' Bacon said.

The spokesman said Grachev had tentatively accepted Perry's invitation to the United States to see the exercise, which is a continuation of a similar bilateral peacekeeping exercise held in Russia last year.

``It looks like if he (Grachev) comes, he would meet in Washington with the secretary on the 26th and then they would go out to Kansas together on the 27th,'' said Bacon.

Does anyone know the status of Philly Pd's trunked radio system
status? What system was chosen and when will be the implementation dates?
(They already use an 800 mhz freq. to simulcast J Band.)

Finally, does anyone know the status of the 3 copters Philly was
considering purchasing. I's been a while since I heard anything.

Any info on either topic above will be helpful!

Thanks,

Joe Cardani

f>going >all digital and that the phase-in will be happening soon -
f>primarily due >to the fact that new radios being bought are
f>analog/digital compatible... >anybody else know about this situation?

f>LAPD will not be fully digital for at least 5 years. They are slowly
f>phasing in digital equipment.

Their digital stuff is still in the analog mode. You can tell if an
Astro or digital Saber is in use if there is also an older radio in use.
You will hear an "echo" because the Astro radios take about 1/2 second
longer to process the audio. If you watch the show "LAPD" you will hear
this sometimes.

Actually that is the absolute truth I thought you were
hurting your image by your posts.

>

> solicited or welcome FIRST. No?

If you insist in posting in a public forum expect public replies.
As to a "hosing" I don't think I "hosed you". I thought the way
you handled your critics was counter productive to your stated
intentions of defending yourself, I said that. That Mr Cheek is not
an attack, it is support. Apparently this is lost on you.
>
> > Since schoolyard name calling bores me I have no intention of

What on earth is the point of this diatribe? Do you want to look more like a fool than you already do? You answer nothing with this you just insult to be insulting, sure make you look good.

>
> Indeed you are, too. Good going!
>
> Bill Cheek

Bill,

You keep doing it. People post reasonable posts and you start name calling and accusing. Quite mature. Thanks for once again proving your critics right. Have a nice time calling me names and such you just look dumber and dumber not just to me but to all who read your blasts. I believe (this is my opinion not putting words in other peoples mouths) that every time you do this you demean yourself and erode respect for you. If you want to lower your image on the net have a ball just remember I never called called you a name or accused you of anything other than public bad judgement. Prove me wrong, just shut up for a change, bet you can't.

Best wishes

Jerry

Radio Shack PRO-43 Modifications FAQ
< Last modified September 10, 1995 >

CONTENTS

1. Introduction
2. Which units can be modified for extended frequency
reception?
3. Companies that will modify the PRO-43 for extended
frequency reception
4. The modifications
extended receive (original mod + solderless)
keypad beep delete
improved audio
attaching an S-meter
400 memory channels

---

1. Introduction

As long as there is a continuing demand for it, this mini-FAQ about PRO-43 modifications will be posted every month or so. In large part, it is the file PRO43.MOD from pub/hamradio/mods/tandy at oak.oakland.edu .

The FAQ now includes mods for

(1) extended receive (original mod + solderless)
(2) keypad beep delete
(3) improved audio
(4) attaching an S-meter

There is also a mod for 400 memory channels, but, to quote its author, it is very complicated, should only be attempted by someone with moderate to advanced electronics experience, and is not for the faint of heart or the "weekend technician." A brief description is included at the end of this FAQ. If the mod were included in its entirety, the size of the FAQ would be increased four-fold.

---

2. Which units can be modified for extended frequency reception?

Note: In the United States, it is against the law (Electronics Communications Privacy Act of 1987, public law 99-508, amended 1994 by public law 103-414) to listen to cellular or cordless telephone communications. However, it is

not illegal to own equipment that can receive or can be modified to receive such communications, even though it became illegal as of April 1994 to manufacture or import equipment that could be easily modified by the user to receive cellular communications. Equipment manufactured before the cutoff date can continue to be sold until stocks are exhausted. While businesses are forbidden from importing cellular capable scanners for resale, the question has been raised whether an individual can legally import such equipment not intended for resale. The issue is not explored here.

Which PRO-43 units can be modified for extended receive? Units sold in the US and Canada can be identified by the following scheme

Modifiable | Nonmodifiable
|
serial number no A in # | begins with A
FCC-ID AA020-300 | AA020-300A

Inside the battery compartment is a paper label containing the date of manufacture in the form "month A year". For example, 5A3 is May, 1993. The cutoff date after which units could no longer be modifiable is April, 1994 (4A4). So far, the earliest reported date of manufacture of a nonmodifiable unit is 3A4 (March, 1994). There have been *no* reports of a modifiable US 3A4 unit. However, there have been reports of a modifiable Canadian 10A4 unit; it did not have an A in the serial number. Until there is evidence to the contrary, the following rule for determining modifiability of a PRO-43 is to be considered *definitive*.

THE SERIAL NUMBER IS THE MOST ACCURATE WAY OF DETERMINING WHETHER A PRO-43 CAN BE MODIFIED FOR EXTENDED FREQUENCY RECEPTION. IF THE SERIAL NUMBER CONTAINS AN A, THE UNIT IS NOT MODIFIABLE.

It has been reported that some units currently being made for sale overseas can be modified for extended 800 MHz reception. However, it is not known whether this applies to all overseas units or, if not, whether there is a way to distinguish modifiable units from nonmodifiable units.

The PRO-43 was produced under two brand names. My 3A3 unit carries the Realistic name; my 12A3 unit carries the Radio Shack name. At the moment, it is not known whether this represented a changeover or whether both types were produced side-by-side for a time. It is also not known whether their electronics are different.

There are no software modifications for the PRO-43. It is not possible to extend the frequency range of the radio by

pushing buttons on the keypad. Such modifications are possible with other models, such as the PRO-51, but *not* with the PRO-43. The PRO-43, made by GRE (General Radio Electronics) of Japan, is one of Radio Shack's few triple conversion units. Radio Shack scanners with software mods are double conversion units made by Uniden.

Modification procedures for other radios are available by anonymous ftp from the pub/hamradio/mods/<manufacturer> subdirectories at oak.oakland.edu.

There is some debate about whether step (5) of the extended receive modification is worthwhile. According to Bob Parnass, from his "Improved Audio Mod", below:

"Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage."

So, if you trash the diode in step 4 or want to quit while your ahead, don't lose sleep over it. On the other hand, quoting ray_reese@tscnet.eskimo.com (Ray Reese),

When I purchased my PRO-43 and did the mod for adding 54-88 Mhz, using the removed cell. diode, I wanted to be able to listen to the sound carrier for the tv channels 2-6 as well as the 72-76 Mhz band. It is worth the trouble to make the mode and it does work well in my area, despite not having the correct coils for that band area. Do the mod anyway, but [if you've trashed your original diode], use a 1N4148 fast-switching diode. Perhaps a 1N914 might do the job also. They can be found at Radio Shack for a cheap price.

---

3. Companies that will modify the PRO-43 for extended frequency reception

If you'd rather not do the modification for extended frequency reception yourself, Cellular Security Group, 106 Western Avenue, Essex, MA 01929 (508/768-7486) will do it for $40, which includes insured UPS return postage. However, CSG will not move the diode to extend the low band to 88 MHz; they only remove the diode to unlock the 800 MHz frequencies. When CSG is mentioned on the net, two types of comments follow: testimonials from satisfied customers and comments from those with the technical skills claiming that the service seems high priced for just removing the diode. But, there have been *no* reports of shoddy work or damaged radios. (They've modified

two of mine.) Units are processed within 24 hours of receipt.

Grove Enterprises' newly advertised Repair Service will
perform the mod for $40 plus shipping. They will move (rather
than just remove) the diode in units that can benefit from it,
but state that there is no way to tell whether the diode
should be moved without looking inside. They claim that the
determination can not be made from the serial number, FCC-ID,
or date of manufacture. For further details, call Grove at
704/837-7081. In order to get a unit modified, a service
order number must be obtained from the same telephone number.
Packages without a SO# will be refused.
----
4. The modifications

From: armille@afterlife.ncsc.mil (A. Ray Miller)
Summary: cellular (870-890 MHz) and low band (51-88 MHz) restoration for PRO-43

A few people have mentioned the cellular mod for the PRO-43; it turns out
you should not remove but MOVE the diode. Doing so allows cellular coverage as
well as low band (up to 88 MHz) coverage.

Acknowledgments to Grove Enterprises; this information came from them.
They are selling the PRO-43 for $300 which is $50 less than Radio Shack.
I have no connection with them other than as a satisfied customer.

PRO-43
Cellular Frequency Restoration and Low Band Expansion

Note: It is not lawful to monitor cellular or conventional mobile telephone
conversations.

The following procedure requires familiarity with microcircuit soldering and
will violate your warranty. Grove Enterprises assumes no liability resulting
from its attempt, nor will accept the modified scanner for return under any
condition.

TOOLS NEEDED: Fine point, low power soldering pencil; solder wick or a
desoldering tool; pointed awl, hemostats or pointed tweezers; small Philips
screwdriver; solder.

1) Remove the battery, antenna and back cover (held in place by four screws).

2) Remove the six screws holding the top circuit board in place. Carefully
unsolder the two antenna connections from the board. Bend the antenna ground
tab fully up from the board. Carefully lift the board, unplugging the black
connector at its base, and lay the board out of the way on its bundle of
colored wires.

3) Remove the two screws from the next board and lift it, carefully unplugging
the white connector at the bottom of the board. Lift it up and lay it aside on
its brown wire (which can be unplugged if necessary).

4) Unsolder and remove the metal shield from the final board, revealing the microprocessor; note the row of diodes labeled D1-D5 above it. Only diodes D1, D2, and D4 are present; assisted by a pointed tool, unsolder and remove D4, the lone diode (this restores cellular frequencies which will be searched in 30 kHz steps).

5) Resolder the removed diode carefully into position D3 to extend low band coverage to 88 MHz.

6) Reassemble the boards, paying particular attention to the alignment of the plugs. Test the radio by entering any frequency between 870 and 890 MHz (cellular) and 51-88 MHz (low band).

From: IN%"savage@dg-rtp.dg.com" 2-FEB-1995 17:55:07.31

BTW, I did something similar [to the mod that follows] but MUCH easier... No soldering, removing antennas, PCBs, etc..

Just open up the Pro 43 and look down on the bottom PCB from where the batteries usually lie. You'll see the diodes there. Simply take an xacto knife and and break the solder on the D4 diode (left-most on mine) on the side facing you. I just cut back-and-forth for a bit. Once the solder (it's surface mounted) is weak enough, I just bend up the diode a bit from the PCB. Presto. I left mine hanging on the one side with solder. If you continue to work it a bit, you can probably remove the whole diode.

--Ed

From: springel@umich.edu (Jason G. Springel)
Subject: MODing a Pro-43 without soldering

I just purchased a new Pro-43 to replace my Uniden 200XLT after reading many of the praises for the Pro-43 on this newsgroup. I decided to try and MOD it, but don't have a lot of experience with a soldering iron. After examining the scanner's innards, I found it was quite easy to "fix" with nothing more than a minature philips screwdriver and some small needlenose pliars.

********** Standard Discalimer from other MODs:

1-It is against the law to monitor cellular or mobile telephone calls.

*****2-Procedures outlined below [DO NOT] require knowledge of microcircuits, soldering and assembly techniques.

*****3-You will [NOT] need a low-wattage soldering iron, solder and other various tools to help in the procedure.

4-The following procedure will void your warranty.

****
Here is my new MOD:

Step 1

Remove the battery, antenna, and back cover which is held in place by four screws. Place the scanner keypad-side down on your working surface.

Step 2

Remove the six screws holding the top circuit board in place.

Step 3

Using a VERY small screwdriver (I used one from a Radio Shack kit), remove the two screws from the lower circuit board. Looking down at the unit, you will see that the screw on right side of the lower circuit board can be easily removed. Remove the screw on the left side by by sliding the screwdriver between the top circuit board and the metal frame which holds the two boards together.

Step 4

With these two screws removed, you can now lift the entire top panel (antenna, volume, and squelch knobs) along with the top two circuit boards as one unit. The two circuit boards will be connected to the final circuit board (the one attached to the front section of the scanner) by several wires. Simply set the top panel/circuit boards alongside the front section of the scanner and you can leave these wires connected.

Step 5

The microporcessor is located under the large metal shield on the final board (the front section of the scanner with the display and keypad). If you look under metal shield from the side closest to the bottom of the scanner, you should see the row of diodes labeled D1-D5.

Only diodes D1, D2 and D4 should be present.

Use a small pointed tool to break off D4. You actually don't have to remove it completely (unless you want to use it to restore additional frequencies as explained in other MODs), you can just lift one side so it dosen't make connection and then put a small piece of tape or heat shrink over it, so it won't. Make sure it's not lifted to high or the boards will not fit.

This will restore Cellular Frequencies in 30 kHz steps.

Step 5

Reverse the process to replace the top panel/circuit boards and the two screws that connect the lower circuit board. Replace the 6 screws from the top board. Replace the cover, etc.....

...the diode positions on the cpu board, of which only three are
filled look like this. Where X equals a diode soldered in place.

D5 D4 D3 D2 D1

O X O X X Normal configuration

O O O X X Cellular modification(D4 removed)

O O X X X Lo-Band modification(D4 in D3's place)

These directions were based on an original MOD design whose origins I
do not know. My thanks go out to the original author of that MOD!
Hope this helps those of you who do not own a soldering iron!

From: ross@novax.llnl.gov
Date: 19 Aug 92 16:51:08 GMT

Here is my keypad beep delete mod for the RPO-43:

1. Remove battery.
2. Remove back cover (4 screws).
3. Remove top board (6 screws, desolder two antenna connections and bend
antenna ground lead up out of the way). Be careful of black connector at
bottom of board. Flip board over and lay aside (wire connectors need not be
disconnected).
4. Remove middle board (remove 2 screws and wire connector). Be careful of two
multi-pin connectors along underside of board. Set middle board aside.
5. Locate 10 pin connector on side of bottom board (labeled CN3). Note that one
end of connector has pin 10 labeled as such. Count back to pin 6 and bend
pin 6 ninety degrees towards the large RF shield. Make sure the bent pin
clears the RF shield.
6. Reassemble and your done OR do the cell mod since you are so close.

Have fun. Gary Ross >usual disclaimer>

Subject: Improved audio for the PRO-43 portable scanner
From: parnass@cbnewse.cb.att.com (Bob Parnass, AJ9S)
Date: Wed, 2 Dec 1992 01:15:35 GMT

IMPROVED AUDIO FOR THE PRO-43 SCANNER

by Bob Parnass, AJ9S

The Radio Shack PRO-43 scanner audio is too bassy.1 The
lack of treble makes it difficult to hear the PRO-43 in
noisy situations, especially while listening in a car
or truck. Louis Shirley sent me a schematic and sug-
gested I remove C341, a tiny 0.015 ufd surface mount
capacitor.

I'm glad to report that removing C341 made a great
improvement. The audio is now much "crisper," more
like the Uniden 200xlt, although still not quite as
loud. Turning the volume control up still overloads

the PRO-43's small, internal speaker, but there's less need to do that once C341 is removed.

The PRO-43 contains 3 printed circuit boards, and the middle (second) board contains the audio circuitry. Finding C341 is difficult, as it is neither marked with a value nor a component designation. It is located on the foil side of the middle board, under IC304, an LM386 amplifier IC. C341 is in parallel with, and physically next to, R350 (33,000 ohm). R350 is slightly larger than C341 and is marked 333. Both R350 and C341 are connected between pin 2 of the LM386 and ground.

A Note About 50-88 MHz Reception

Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage.

---

Subject: S-Meter for PRO-43
From: schuster@panix.com (Michael Schuster)

Found this on the Fidonet scanner echo:

=====begin quoted text=================

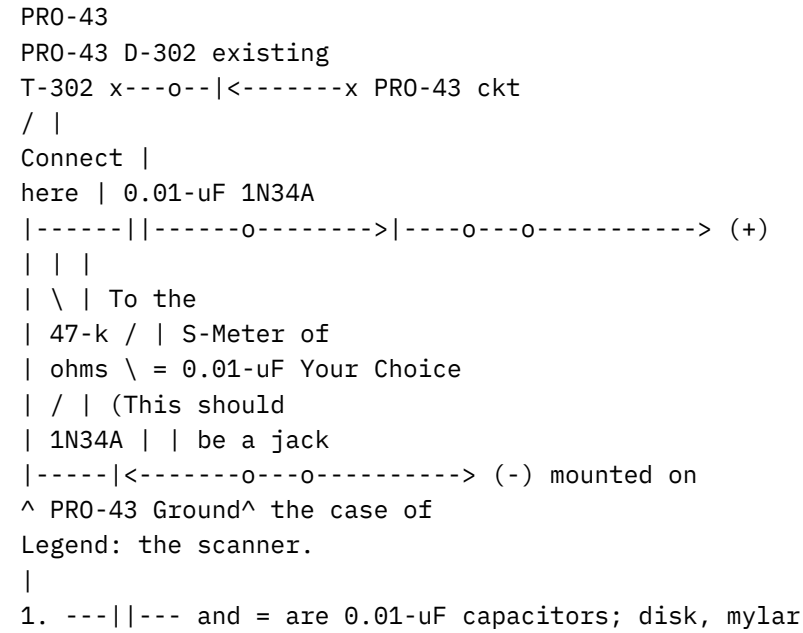
Date: 02-06-93 00:24
From: Bill Cheek
To: All
Subject: PRO-43 S-Meter!

Greetings Scanner Fans!

It had to happen! The fundamentals for an S-Meter exist alive and well in the PRO-43! Only a simple circuit and your choice of meter, analog or LED, is required for a jim-dandy S-Meter function!

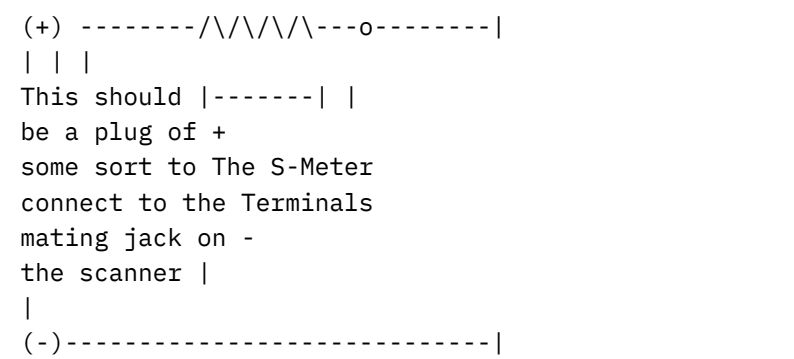
The key point in the circuit is the cathode of D-302 located on the bottom (solder side) of the AF Board (middle board). You will need the Service Manual for the PRO-43 to find it as it's not marked and it would take me 10,000 words to guide you to exactly where it is located. Call Tandy National Parts at (800) 442-2425 to order your manual: approx $10. Now here is the deal:

Locate D-302 and either build the following circuit right there on the back of the AF board in the vicinity of D-302, or solder a wire to the cathode of D-302 and route it to somewhere else more convenient to feed the below circuit. This wire ought not to be very long, though, say not more than a couple of inches. Refer to the ASCII schematic diagram as follows:



PRO-43
PRO-43 D-302 existing
T-302 x---o--|<-------x PRO-43 ckt
/ |
Connect |
here | 0.01-uF 1N34A
|------||------o-------->|----o---o-----------> (+)
| | |
| \ | To the
| 47-k / | S-Meter of
| ohms \ = 0.01-uF Your Choice
| / | (This should
| 1N34A | | be a jack
|-----|<-------o---o----------> (-) mounted on
^ PRO-43 Ground^ the case of
Legend: the scanner.
|
1. ---||--- and = are 0.01-uF capacitors; disk, mylar, monolythic, chip
|
2. --->|--- and ---|<---- are germanium diodes, 1N34A
| is cathode
< is anode
3. o means a connection, preferably soldered
4. The 47-k resistor is self-explanatory, I hope.
5. -------- and | are wires/conductors.
|
|
6. x is existing PRO-43 circuitry

If you use an analog meter, preferably a real S-Meter like salvaged from an old junked CB rig, then rig it as follows to connect to the circuit above:



You can also build the 10-segment LED S-Meter as shown in Volume 2 of my SCANNER MODIFICATION HANDBOOK, available from leading mail order radio dealers everywhere. ISBN 0-939780-14-3 published by CRB Research Books, Inc. Commack, NY.

After connected and working, locate the PRO-43 very near a known strong transmitter, perhaps a ham transmitter, a police cruiser, your favorite security guard's handheld or right next to a cordless telephone, or anything else known to transmit a strong signal. Tune the scanner to the frequency, and adjust the 5-k trim pot above so the meter reads exactly full scale. All other signals will read proportionally lower to yield "relative signal strength" measurements! A hell of a circuit here, boys & girls! Have fun!

Subject: PRO-43 w/400 CHANNELS HERES HOW!

IT IS NOT FOR THE FAINT OF HEART however.

PRO-43 ENHANCEMENT
MEMORY EXPANSION & "FADE-AWAY" LIGHT
Brett Bennett 4/12/94
bbb@kuhub.cc.ukans.edu
Copyright 1994 B&D Electronics All Rights Reserved

INTRODUCTION

The following document details two enhancement modifications that are possible on the Radio Shack PRO-43 scanning radio. The first modification doubles the factory standard memory capacity, allowing you to enjoy an additional 200 channels of memory, plus 10 more monitor memories. After completing the first modification, it is a fairly simple matter to add a 7 to 10 second delay feature to the LCD back-light lamp circuit. I designed and performed these modifications on my PRO-43 and they do work. As I understand it, there (has been/is being) presented in WORLD SCANNER REPORT a similar memory expansion. I have not seen this modification and for all I know it is a better way of doing it. What is presented is a 'clean-room' design of my

own that to the best of my knowledge is the only one to also offer a time-delay for the LCD back-light. Having said that, let me say:

I ASSUME NO RESPONSIBILITY FOR ANYTHING THAT MIGHT HAPPEN TO YOUR RADIO SHOULD YOU OR ANYONE ELSE ATTEMPT THESE MODIFICATIONS. WHILE REASONABLE CARE HAS GONE INTO THE PREPARATION OF THE FOLLOWING DOCUMENT, I CAN NOT GUARANTEE THAT THERE ARE NOT ERRORS.

The procedure described below is very complicated, and involves the soldering and desoldering of very tiny components and the cutting of printed circuit board traces. While the procedure is not irreversible, it will leave permanent scars inside your scanner. It should only be attempted by someone with moderate to advanced electronics experience. I don't think it should be attempted by, to quote someone else, a "weekend technician." If as you read through this you feel intimidated by the jargon and required procedures or if an electronic schematic looks like a strange piece of modern art to you, then this might not be the 'mod' you are looking for. The following document will assume you have obtained the materials listed below, especially the Service Manual, and you have studied the circuit in some detail. I will not describe in great detail where every component is or where every solder point on the logic board should be placed. Having the Service Manual, and having studied the drawings therein will allow you determine to where it is I refer.

REQUIREMENTS

1 - PRO-43 Service Manual. (Tandy Parts # MS-2000300 - approx. $6.00)
1 - CD4053 - Triple - SPDT analog switch - Surface mount package (DigiKey #CD4053BCM-ND - approx. $1.50)
2 - 93C67 EEPROMs (Tandy Parts # MX-8050 - approx. $13.00/each)
1 - 100k x 5 resistor network. Common lead type. (DigiKey # Q5104)
1 - UN2111 PNP transistor (Q1 on Logic PCB. Tandy Parts #)
1 - 1 uF 16v capacitor.
1 - 10 MOhm 1/8-1/16W resistor.
Misc.:
Wire wrap wire-30 gauge. (Radio Shack)
Grounded soldering iron with approx. 1/32" tip or smaller.
Desoldering Equipment.
Digital Volt Meter. (Used to double check your VCC and Ground connections, pre-check switching assembly)
Utility knife with fresh sharp small blade. (Needed to cut traces.)
Strong hand held magnifying lens. (Needed to check solder joints.)
+5-10 Volt bench power supply. (Used to check switching assembly.)
Anti-Static work place and grounding wrist band.
Very fine needle nose pliers, wire cutters.

Restoring Full 800 MHz Coverage
in "Unrestorable" Scanners

Copyright 1996 by Bob Parnass, AJ9S

Several posters assert that restoring full 800 MHz coverage is impossible in current model scanners marketed in the USA. Hold on to your chair: It is possible and very simple in some cases.

I restored full 800 MHz coverage with full sensitivity to one of my USA BC9000XLTs, and all it takes is one DPDT switch. (The surface mount construction makes it a challenge, though, but that's a different story.)

The BC8500XLT and BC220XLT can be restored. There's a fair chance the USA versions of the PRO-26, PRO-51, and BC3000XLT can be modified -- and not by changing anything in the microprocessor or keyboard reprogramming.

How? Swap the image with the non-image. I call it an "image swap." The idea is to switch in the 800 MHz front end bandpass filter and listen to the proper image. The display will still be wrong, but the 800 MHz sensitivity should be good.

Think of switching the front end filters as swapping the image with the original signal. In the case of the BC9000XLT, 880 MHz images appear near 370 MHz. Switching the UHF air and 800 MHz front ends using a simple toggle switch makes the 800 MHz signals full strength and attenuates the military air signals, but the display still reads in the 370 MHz range.

I didn't invent this. Steve Donnell WA1YKL wrote about it at least twice: once in the RCMA Journal and in NatScan. It's big news but most people missed it.

Steve Donnell published a BC8500XLT modification in the Mod House column of the National Scanning Report (Sep/Oct 94) which added a switch to:

1. select the NFM mode instead of AM in the military air band
2. enable the 800 MHz front end filtering when the scanner

is programmed to the military air band
3. disable the 300 MHz front end filtering when the
scanner is programmed to the military air band

The net effect of (1), (2), and (3) is reception of the missing 800 MHz segment even though the displayed frequency is in the military air band. Steve wrote about modifying the BC220XLT in another article.

I found the BC9000XLT was even simpler to modify because it already permits mode and step size selection on all frequencies.

I see from the MT part of the Grove web page (http://www.grove.net) that Steve will explain this method in further detail in the February 1996 Monitoring Times.

Hobbyists not comfortable with soldering may consider paying a commercial company to install a "Virtual 800 MHz Down Converter," i.e., a DPDT toggle switch.

I don't have schematics nor service manuals for the BC220XLT, PRO-51, or some other models so I won't be able to advise on modifying your scanner unless provided with the appropriate service documentation.

When the FCC was in the process of approving the transfer to another company, their records and ours (5 TV stations) were not in sync, at all. We were using auxiliary frequencies, had the FCC paper to prove we were licensed, but they had no record. Conversely, they had us down for frequencies long expired, we had quit using. My understanding from our attorney working with the FCC was that it was no big deal to them, they knew their records were not accurate. Regardless, the license was transferred.

Call your local rescue squad, as some of the volunteers there will always know the frequencies. I knew the ones that pertained to my area because of people at my squad. Also, could it be that the copter people switched to a direct phone line for dispatch only? The did that here in Virginia for one of the local services.

I'm relatively new to scanning. I received a Uniden BC-230XLT and love it. I think I read somewhere
that even if cellular frequencies were blocked out that one could use "harmonics" to receive them. By
that, it indicated one programs the frequency a certain higher number and it can be heard. Can anyone tell me what the number is?

I have the Bel 745STi Plus and it falses on the Ka photo band way too much
for me. The box seems to see other detectors more than anything! Anyone
else experience this?

Also, I heard that the 755 is coming out. Anyone know what the difference is
between them? Maybe it doesn't false so often.

Well ya know the Pro-43 is capable of 16.8 million colors and has a
rez of 600dpi. Pretty damn nice for a unit that only has 200
channels.

See ya, Joe

Try this: Bend a piece of coat hanger into a U shape. Bend the ends and hook the U onto one of your AC/heating vents (takes a bit of finagling to get it just right, but you can already see where this is going...). Slip the scanner's belt clip over the base of the U and voila.

Velcro works too, obviously. Get the wide strips (hardware store is often cheaper than Rat Shack).

Last, I saw in Walmart that they sell a rectangular-shaped clamp thingie in the auto section that is designed for cups but it just about the right size and shape for a scanner. It attaches with Velcro.

I agree with everything up to this point...but...

Use gold plated Type F
>conectors on the RG-6 cable and a gold plated F-to-BNC adapter down in
>the shack to adapt the cable to the scanner's BNC connector.

Gold plated connectors???

I can see why one would use gold plated connectors for the outside portion of the connection(anti-corrosive) but why use these over priced connectors inside when the BNC recepticle is made of regular plated or stainless steel.

We don't use these much in the broadcasting industry and I certainly am not an expert on gold vs regular connectors...but I have used gold plated connectors on a few a projects and I'm not convinced that it made any difference.

Convince me and I will convert....to gold that is(g).

Sorry, I am in the Fairfax area and can pick up from Manassas to Maryland.

An example of my fustration was this past weekend when there were people trapped on the rocks at Great Falls in Mclean - The first rescue that day (there were two) was coming in loud and clear until someone suggested that they all switch to Fairfax Fire channel 6!! - lost them. The second resuce that day stayed on the dispatch channel and I got to hear all of the communications between the ground units and the chopper, rather interesting.

So - it is the channels that the units switch to after dispatch has given the call that I seek.

I have consulted the 96' version of police call (beyond) and the trunked freqs. they give me have nothing but some plumbers chatting about there next stop!?! and a cell call every now and them.

thanks for any help.
Wayne.

1893. Philly PD 800 Mhz trunked radio status?

Sounds like a good idea to me. What happens when Bill Cheek and the
Anti-Cheek people get on? It will turn into IRC.B.

TD, series one the unit I am looking for?

1895. AR8000 Australian Band Plan

Newsgroup: rec.radio.scanner
Date: 1996-01-23 00:00:00 UTC
From: Philip Clark <pgc@cs.adfa.oz.au>
Message-ID: <4e1k2d$c7i@euryale.cc.adfa.oz.au>
Source record: 241754

If you have bought an AR8000 in Australia, you may have found that it does not have an Australian band plan in it. It will probably have the UK band plan. This can be a pain at times (most times!).

To make things a little easier for myself, I have written an Oz band plan and I am willing to share it. While I do not present it as fully complete or totally accurate, but it is certainly a lot better than the one that comes with the receiver.

You can get the system data out of the receiver just by using the terminal accessory in "Windows", which is how I did it. Its a little bit tedious but at least you dont need a special software package. I wrote the band plan by just using a text editor, then recombined the band plan with the rest of the system data. (Leaving out the old band plan, of course!)

To read the system data out of the receiver, set up the terminal package to receive a file, set the receiver to send system data and press enter on the receiver. The first address should appear on the screen. You then type in the address the receiver presents, including the % and # symbols. Each time you enter the # symbol you should get back a string of data followed by the next address. Continue doing this until you have sent address %8000# to the receiver. Save the file. This should now be your system data. You can now edit any of the data you like! BUT BE CAREFUL!!!

If you are going to use the crude method below to put the system data back, you will need to format the WHOLE system data file like this example. That is an address on a line of its own followed by a line of data.

DONT FORGET that you must send ALL of the system data, not just the band plan part.

```
%7800!
FFFFFFFFFFFF020000010000001000000FFFFFFFFFFFF020000090000020520000FFFFFFF
FFFF010000010000080720100FFFFFFFFFFFF040005000000000800100
%7840!
FFFFFFFFFFFF030005000000050870100FFFFFFFFFFFF020000010000000300200FFFFFFF
FFFF030005000000000500200FFFFFFFFFFFF020000010000000200300
```

To put system data back, set up the terminal package to send a file, a line at a time.
Start the transmission and just let it sit.
Set the receiver to receive system data and press enter.
You should get the first address appear on the screen.
Using the mouse or whatever, select "pause transmission", then "restart

transmission". You should see a line of data go out then it will halt at the next address. Do the pause, restart bit again. Keep doing this until the whole file is transmitted.

Worked for me!!

You won't find any improvement unless the signal is low. I used a
PRE-4 for satellite listening with good results.

Dang! The technician group is now the most populous of all license classes. Let the license snobs piss and moan, there are more techs now than all the other classes combined (and believe me that is not going away)... Ham Radio as it was known was dying on the vine, there is no disputing that. The no-code license may be able to save it, unless the license snobs frighten away all the newbies.

Anyway, why would a no-code tech want to upgrade when he/she has access to over 10 times the spectrum of the HF bands without getting into microwaves (>1GHZ)? Surely not so he/she could associate with the spouters of ill will. Those who poo-poo the nocoders are shooting themselves in the foot, they should be elmering and otherwise encouraging these new hams.

Go ahead, and look my license up in the callbook. I ain't afeared.

1898. Cell Phone Band Plan

Newsgroup: rec.radio.scanner
Date: 1996-01-23 00:00:00 UTC
From: bmm1@freenet3.scri.fsu.edu
Message-ID: <4e3gnj$lvc@freenet3.scri.fsu.edu>
Source record: 241757

The following is the account of an experimental analysis of how the cellular phone system works. Note that these experiments can be reproduced based only on measurements of signal strengths without "interception of oral communications" which the ECPA forbids. Anyway I find a technical analysis of the system to be much more interesting than anything someone might have to say on a phone. Anyway...

I downloaded something back around 1989 about cellular phone systems. It described the cannel spacing and the A and B band and talked about cells and had a twelve page chart showing all the frequencies in each cell and then went on with an analysis of the then recently enacted electronic communications privacy act etc.etc. It refered to cells as A band cells A through G and B band A through G, Around that time I took the printout and a highlighter and highlighted all the frequencies where I detected activity. Recently I looked for activity and found things have changed quite a bit in seven years. Frequencies that were active then are not used now. Of course many frequencies are active now that were dead then. Also I recal many week signals then. Now there are many strong signals and few week signals. I suspect what has happened is this: the first cellular tower in town was a bohemouth by todays standards. I suspect it used higher power and covered the frequencies for several cells. Now that there are many more towers the power and tower heights have been dropped. Therefore the signals on the voice channels are from closer and the signals from further away are not heard.

I don't understand what the cells A through G are all about. As I understand it there are two bands each having 21 cells. Each cell has 16 (or sometimes 15) channels, the first of which is the control channel. The channel spacing in each cell is every .630 Mhz and spacing between cells is .030 Mhz. Using this information one can enter data in Microsoft Excel as follows

CHANL 1 CHANL 2
CELL A1 879.99 879.36

CELL A2 879.96 879.93

then use the mouse to drag this data out to 21 by 16 and you get a band plan for band A. The same thing can be done with band B. Now if you monitor the signal strength of the channel 1 control channel which transmits continuously you will find that the signal strengths of the audio frequencies are, for the most part the same. There are however exceptions. Some cells have a very strong control channel but no activity in the associated audio channels. Other strong control channels are here today and gone tomorrow. Also band B never shows any

activity in the highest channel of any cell. Could these be reserved for some other use, pageing perhaps? Also there is activity outside of the original cell band of 870.00 to 890.00. How do these tie in to the band plan? I suspect the individual cellular phones have total slave relationship to the system doing exactly as they are told by the control channels.

Any thoughts, clearifications or comments would be appreciated.

I used a very simple splitter available at Radio Shack. FM works fine,
but AM is totally dead when the scanner is plugged in. To eliminate
this problem, there are commercial splitters for sale that allow you to
use the car radio antenna.

>RS had a couple but they didn't fit very well.

RS has a real leather case that is made for the Pro-60 for $20. A friend
just got one and says it is really nice. You might have to call Tandy parts to
find it. Some of the RS outlets aren't really swift with new products and what
inventory they really have.

> Any ideas on how to attach
>Pro-60 to dash so it doesn't slidearound?

Epoxy super-glue or hot glue? Nails or sheet metal screws? Velcro? :-)

Brand new hand-held color scannners are selling for as low as $148 (at Wal-Mart).

1904. Atlanta PD Codes?

Newsgroup: rec.radio.scanner
Date: 1996-01-23 00:00:00 UTC
From: wpstodd@aol.com
Message-ID: <4e1q5j$27v@newsbf02.news.aol.com>
Source record: 241763

When listening to the Police, I notice the dispatch uses signals # and the officers use codes (no 10 codes). The third edition of Monitor America has the correct signals listed but the codes do not correspond. Any information on the codes used for Atlanta PD would be greatly appreciated. Thanks.......Bill

>All your windsock rhetoric sounds like BS to me

Oh geezus, here we go again..... <sigh>

> and prblably everyone else who also realizes that a log periodic
> is broad banded in its response.

That's right, Ignats. Soooo broadbanded (like a discone) that it has relatively low gain and relatively low F/B ratio. But the chief advantage of a log periodic is consistency and flatness of its response over the bandwitdth of its design. That's good!

> A TV antenna is nothing more than a glorified dipole with an
>attempt to widen tha frequency response with additional dipoles at
>best.

You're fuller of shit than a Christmas Goose. TV antennas are a hybrid combination of yagi and log periodic principles.

>You have some good points if you can specify the frequencies you
>are interested in monitoring in advance and constructing the TV ANTENNA
>to match.

In a word, there are "holes" in the performance band of a TV antenna. But the *overlap* is quite adequate for scanners, with a gain well above unity. In other humble words, a TV antenna beats the snot out of a discone and other omni scanner antennas. And, it may well outperform a dedicated log periodic across much of the spectrum. The sharp nulls on either side of front center azimuth are a strong PLUS for rejecting undesired signals while optimizing desired ones near the same azimuth. A log periodic is not nearly so capable........

> But for general broad-band response, the log periodic is
>unquestionably superior,(budget allowing).

THAT quite depends on the criteria for "superiority". A good TV antenna will have a lot more GAIN and F/B ratio than a log-periodic across much of its bandwidth. Where is the "superiority" there?

> I think the decision has to
>be made on need vs. cost. But in the end you get what you pay for.

That's what I said. I also noted that you don't drive a Rolls nor monitor with an ICOM R-9000....... Your point is hollow.

>(Also your bias against amateur radio operators is showing
>embarrassingly. May be you had a bad experience in your past?)

Just a few snooty ones like you. You're a textbook example.....
Fortunately, most are not like you. I have no bias against classes of
people....aside from.... ass- wipes, bites, licks, and holes.

> I was only responding to the original question with my own opinions and
>experiences, and was not expecting to be flamed for it.

Any time you flame me, it is likely you'll get something for your time
and trouble in return. If you can't take it, don't dish it out first.
And since your INITIATED, AGGRESSIVE "opinion" of me was expressed so
elequently first, mine of YOU, in any terms, is amply justified (and
issued.).

> Sorry if I treaded on your opinions.

You didn't. You're simply misinformed for one, and two, you have deep
rooted psychological problems with your need for a phallic prosthesis
in the form of that great big antenna that you are so compelled to
ignorantly defend.

At very best, there is an infinitesimal market for the CREATE
antennas. But almost everyone has a TV antenna laying around. THAT,
my dear Mister *Amateur* Radio Operator WA6SUL, is the point.

That, and if you don't like flames, don't flame first. Comprende?

This is symptomatic of a failing audio output capacitor.

Test/replace C64, a 100 uf 25 volt electrolytic capacitor
connected between pin 1 of IC5 (TDA1905 audio amp) and
the external speaker jack.

Hi Gary,

> Is this mod "retrofitable"? Is the filter selectable?

Currently No to Number one. It may change to Yes but thats out of my hands.

Its selectable in that you can have eithet the standard AM filter or SSB
filter, it not selectable in size though if thats what you mean. The SSB
filter is activated/unactivated by pressing the "local" key. You may
also find that on DX models you cannot make us of the DS8000 chip but we
havn't been able to try this out yet.

You might try a cheap cable splitter from RadioShack. Your impedances
will be mismatched but your results may be satisfactory if all signals
are fairly strong.

It seems it would be easier to ge a mag mount antenna for your scanner.

The problem with the one that's made for it is that it is
thin and offers no protection if dropped. The one I got at
the gun show is made with the same material that they make
nylon holsters from and and offers some padding in case it
gets knocked around. Its alot sturdier then a thin piece of
simulated leather.

1925. Is my AOR AR800 a Lemon?

Newsgroup: rec.radio.scanner
Date: 1996-01-23 00:00:00 UTC
From: shawn <shawn@intellex.com>
Message-ID: <4e1kgp$4mi@news.cis.nctu.edu.tw>
Source record: 241784

Here is my story with the AOR AR8000. On January 2, 1996, I ordered the AR8000 from Grove Enterprises. The receiver was shipped promptly to me. As soon as I received it, I unpacked it and removed all the accessories. I then called Grove and got an RMA to return the unit for the cell mod. The unit returned to me about one and one-half weeks later. I began the process of learning to use it. Eventually I became comfortable with the unit and programmed all of my local frequencies in. Then the fun began. I began to notice noise on some of the channels that I had programmed in. Initially, I dismissed it as unusual noise or some other unexplained phenomenon.

Upon closer observation I noticed that when it stopped on one of these frequencies, I could cause it to continue scanning by touching the antennae. This raised my curiosity. I got out my trusty Pro-43 and began to scan side by side. The AOR would stop on frequencies that the Pro-43 did not hear. To make a long story short, I found what is called the wandering birdie.

I began to watch the scanner closely. It regularly stopped on these frequencies: 42.600 460.525 460.350 460.575 163.435 153.485. The squelch would open on these frequencies for 5 or 10 minutes, then the problem would go away. I have also seen similar occurrences on these frequencies: 465.375 156.090 155.460 156.670 42.70 154.815.

This problem has effectively rendered the scanner useless to me because all of these frequencies are local frequencies and one is the local police frequency. What good is a scanner if you can't even scan the local police frequencies???

Today, I called Grove on their Technical Support line. The first person I spoke to, told me they had heard of the problem but acted like it was not a big deal. She suggested that I call Edco and discuss it with them.

I called Edco and spoke with a very defensive gentleman. He told me that it was "designed into the radio and is considered normal." I decided I was going nowhere with this guy and gave up.

I called Grove back and spoke to another lady. She indicated that I was the first person to ever call them with this problem, but they did have a modification that they could do which helps to solve the problem. Only $59 dollars. I indicated that I thought since the radio was new, and because it was such a problem, that they should do the mod for free. She said the best they might do is to cover the shipping. Now it is down to $50.

Tomorrow I am calling again. This time we are going to talk about other options. To pay $600 for a radio that does not scan is incredibly stupid to me.

If anyone has any suggestions, I would love to hear them.

1927. Has anyone designed an ACARS interface

Newsgroup: rec.radio.scanner
Date: 1996-01-23 00:00:00 UTC
From: trio@dial.pipex.com
Message-ID: <310490b1.2737587@news.dial.pipex.com>
Source record: 241786

Apologies if this question has been asked several times before, but it seems hard to find the information needed. I am asking this on behalf of a friend who wishes to receive ACARS transmissions.

Is there a design for an computer interface that one can build to decode ACARS ? I know of the Lowe interface / software. Being a Radio Amateur and having built a Baycom interface for packet radio, I would like to know if something similar exists for ACARS ? The Baycom unit is a small (simple) interface which uses two I.C.'s and plugs into the computer RS232 port. The total cost to build is about UKP 15-20. The clever part is in the software which does all the decoding and error checking. It would be nice if something similar could be built by "Amateurs" to decode ACARS. I know of at least five people who would build such a unit.

Any info would be most welcome.

TIA,

Ken.

1929. WTB: ICOM R7100 unblocked

Newsgroup: rec.radio.scanner
Date: 1996-01-23 00:00:00 UTC
From: Brad_White@fforum.blkcat.com
Message-ID: <NOMSGID_1=3A109=2F239.0_960123_120400_aae1d7fa@fidonet.org>
Source record: 241788

HA>If you have one available please e-mail details.

I'm selling my Icom R7100 and the other following items for a package price of $1590 (OBO). I want to point out that this is no ordinary R7100. The following mods have been performed on this radio.

* The Deltacom computer interface has been internally installed in the radio with a 9-pin serial socket on the rear panel. All you need for computer operation is a serial cable and software (please note that both the Deltacom and ScanStar Commercial software is included).

* 12VDC coaxial input has been added to the rear panel, thus facilitating easier connection in mobile applications.

* Scan/Search speed up. The crystal has been replaced, resulting in greatly improved performance.

ICOM R7100 (unblocked 800 MHz) - Current price is $1688. Includes original box, all manuals, AC cord, DC cigarette lighter plug.

MB-23 R7100 Carrying handle - Current price is $11

UT-36 R7100 Voice Synthesizer - Current price is $54

Deltacom computer interface - Current price is $349

Registered ScanStar Commercial - Current price is $129

If purchased new this package would cost over $2000 so I think my price is more than fair but I'm still open to offers. Please E-Mail if interested at 73477.3426@compuserve.com

next month WUNpersons! Vic
==========
Here's a very brief article sent in by WUNner Jerry Green. Thanks Jerry
and perhaps this is the testing that was heard by various WUN members
awhile back:

ARINC OFFERS NEW HF DATA LINK SERVICE

October 11, 1995
Annapolis, Maryland, USA, October 11, 1995. -- ARINC Incorporated today
announced that it will begin offering its GLOBALink/High Frequency (HF)
service in the North Atlantic beginning November 1, 1995. GLOBALink/HF
is an air/ground data link service using HF frequencies to enable
ACARS-equipped aircraft to communicate with the ground over oceans and
other remote areas where traditional very high frequency (VHF)

line-of-sight communications are not available. It allows users in previously inaccessible areas to access the full range of ACARS services available to VHF service users. The GLOBALink/HF service will use the HF data link ground infrastructure developed by AlliedSignal Commercial Avionic Systems of Redmond, Washington. AlliedSignal will continue to provide day-to-day operation of the system under contract to ARINC. The system, which has been operating since October 1992, has demonstrated excellent performance with greater than 95% success on first- attempt downlinks.

5670: A HOTBED OF ASIAN AERO ACTIVITY
For the past year, WUNners the world over have been reporting increasing civil aero activity on a previously unlisted frequency of 5670. If my memory serves me correctly, it was Bart Hoekstra in the Netherlands who first pointed this activity out to WUN. I have been able to compile the following list from a variety of loggings from WUN members Hoekstra, McDonald, de Mol, and John Charlton via snail mail. Thanks for your efforts guys!

Dhaka BANGLADESH, Madras INDIA, Kuala Lumpur MALAYSIA, Male MALDIVES, Colombo SRI LANKA and Yangon MYANMAR (BURMA)

I have also heard Nouakchott and Nouadhibou Aeradios operating on this frequency within the past few months, so perhaps with further monitoring we will be able to uncover more RDARA and MWARA stations operating here. If I have inadvertently left out any stations here, please do let me know!

TIP OF THE MONTH

Intrepid WUNner Wim de Mol of Wezep, the Netherlands also brings us this fre- quency for a bit of rare civil aero DX, 8948. Delhi, Nagpur, Bombay and Amedhabad Aeradios were all heard recently working regional flights at around 1400-1600 UTC.

AIRLINE NEWS

With peace in the former Yugoslavia now a real possibility, look for the resumption of scheduled service across the Atlantic by Jugoslovenski Aerotransport (JAT) in the very near future. To prepare yourself for this eventuality, here is the latest tentative "SUBJ GOVT APPROVAL" schedule for JAT:

JU 526 Belgrade-New York (JFK) DC10 Mon/Thu dep 1030 arr 1410
with continuing service to Chicago (ORD)
JU 527 New York (JFK)-Belgrade DC10 Mon/Thu dep 2300 arr 1325+1
originating in Chicago (ORD)
JU 530 Belgrade-New York (JFK) DC10 Fri dep 1420 arr 1800
JU 531 New York (JFK)-Belgrade DC10 Fri dep 2000 arr 1025+1
JU 524 Belgrade-Chicago (ORD) DC10 Tue dep 1530 arr 1850
JU 525 Chicago (ORD)-Belgrade DC10 Tue dep 2050 arr 1300+1
JU 560 Belgrade-Montreal (YMX) DC10 Thu/Sat dep 1500 arr 1810

(Continued from previous message)

with continuing service to Toronto (YYZ)
JU 561 Montreal (YMX)-Belgrade DC10 Fri/Sat dep 0125 arr 1520
originating in Toronto (YYZ)

We have a few changes to note over the oggin this month including British Airways Concorde service from London (Heathrow) to Bridgetown, Barbados. SSC service BA272/273 now switches to Saturdays only, BA273 departure from LHR scheduled at 0930 with arrival BGI at 0945. The reutrn trip BA272 departs BGI 1330 with arrival time LHR 2145. Air Canada is now operating 767-300ERs on the following flights: AC844/845 YYC-FRA Thurs/Sat/Sun, AC850/851 YYC-LHR on Wed/Sat/Sun, AC850/851 YEG-LHR on Mon/Fri, AC865/866 YMX-LHR daily, AC868/869 YYZ-LHR except Saturdays, AC896/897 YVR-LHR Tues/Thur/Sat/Sun, and AC884/885 YYZ-TLV on Tues/Sun. AC870 YMX-CDG is now being operated by an A340 on mondays and Tuesdays only. Have you been dreaming of taking a trip to Kangerlussuaq lately? No? Well you should be, as this is one of the world's overlooked civil aero destinations. Otherwise known as Sondre Stromfjord, Greenland, Scandinavian Airlines System (SAS) callsign Scandi operates a 4 times weekly 767-300ER service between Copenhagen and the former Sondre Stromfjord. SK291 operates on Mon/Tues/Wed/Thu departing Copenhagen 1020 arriving Sondrestrom at 1110. SK292 leaves Kangerlussuaq's Sondrestrom Airport at 1245 arriving CPH 2105 on the same days.

Turkish Airlines has been substituting A310s for its A340s recently on the Istanbul-New York (JFK) route. TK581/582 operates with the Airbus on Wed/Thu/Fri/Sat, with an intermediate stop in an unknown city on the way over the ogginand with A340s filling out the rest of the week's schedule. It's official! Virgin Atlantic Airways will begin daily London (Heathrow) -Washington (Dulles) A340 service to commence in late Spring 1996. Word around IAD is sometime in April...Finnair's Winter sked includes Helsinki- Miami AY133/134 operating on Tues/Sun and AY103/104 Helsinki-New York (JFK) service daily except Sundays, all with MD11 equipment. Don't forget that Air New Zealand operates Boeing 747-400s from LAX-FRA on Mon/Tues/Fri as NZ18 and from FRA-LAX as NZ19 on Tues/Wed/Sat. LAX-LHR service as NZ2 operates Wed/Thus/Fri/Sat/Sun and the return LHR-LAX segment NZ1 operates daily except Tues/Wed. Those Cubana IL62s keep on plugging away: Cubana ply the Havana-Gran Canaria route four times weekly, CU472 Gran Canaria-Havana on Mondays, CU473 Havana-Gran Canaria on Wednesdays, CU446 Gran Canaria-Havana on Thursdays and CU447 Havana-Gran Canaria on Fridays. Keep an ear out

early next month for Angola Airlines IL62 service from Luanda to Havana via Sal's Amilcar Cabral International. DT700/701 usually operate during the first week of each month, the last set of flights occurring on the 7th and 8th of January. I'll keep you up to date on February's schedule as soon as I receive it...Aeroflot-Russian International Airlines (SU) of course still operate a large fleet of IL62's across the Atlantic, all of these flights route via Shannon, Ireland. A dead giveaway that you've logged an SU IL62 are the words "NEGATIVE SELCAL" in response to the ATC query "ARE YOU SELCAL EQUIPPED?" However, there are seven selcal-equipped Aeroflot IL62s out there, so you may be surprised to catch one of these flights listed below with selcal. Here is the latest schedule for these flights:

SU317/318 SNN-IAD/IAD/SNN Fri/Sun
SU319/320 SNN-JFK/JFK-SNN Fri
SU325/326 SNN-MIA/MIA-SNN Fri/Sun
SU327/328 SNN-ORD/ORD-SNN Fri
SU341/342 SNN-MIA/MIA-SNN Wed
SU355/356 SNN-MIA/MIA-SNN Mon
SU355/356 SNN-HAV/HAV-SNN Sat
SU357/358 SNN-HAV/HAV-SNN Thurs/Fri

The Fokker F70 on HF? Sure, no problem thanks to a few Asian airlines now operating the type on scheduled flight throughout Southeast Asia. Take Sin- gapore Airlines subsidiary Silk Air which operates the F70 on the Singapore- Vientiane (Lao PDR) route. MI656 operates SIN-VTE Tues/Fri departing 1310 arriving Vientiane-Wattay 1510, and the return MI655 departing Vientiane after a quick turnaround at 1540 and arriving Singapore Changi at 1940. Bouraq (Indonesia) is another HF possibility using the F70 on its routes to and from Ujung Pandang to Singapore: BO195 operates Mon/Thu/Sat departing UPG 1500 and arriving Singapore 1800, and BO196 departing SIN at 1140 arriving UPG 1430 on the same days. Bouraq, Sempati, and Merpati all operate many other F70 route within Indonesia which may or may not appear on HF, but the above two routes would seem to offer the best chance for the civil aero DXer to catch the type on HF in Asia. In Europe, however, British Midland and MALEV Hungarian have added the F70 to their fleets in recent months, and it may be possible to catch British Midland F70's checking in with Portishead Radio, especially when the UK weather calls for diversions. Listen up for the aircraft's registration as the callsign when BM flights call in.

The venerable Fokker F28 is also still heard in ever-decreasing numbers on HF, most notably serving with Ansett Australia on Australian domestic routes. Until recently, the civil aero DXer could hear F28's regularly plying the routes from mainland Australia to Norfolk Island, but as of Fall 1995, the F28's have been replaced by 737s and BAe146s. One real HF possibility is Merpati's Ambon-Darwin service operating as MZ850 AMQ-DRW on Mon/Fri departing Ambon at 0910 and arriving Darwin at 1130. The return MZ851 departs 1230 and arrives Ambon at 1400. For monitors in Australia, Air Niugini and its vast domestic net-work of F28 routes

offer an excellent opportunity to log the type on HF. Some possible
frequencies to check would be 2998/4666/6532/6562/8861/8903/11384/13300.

Source record: 241793

Subject: kHz Scanners

(Continued from previous message)

The Honiara-Port Moresby Air Niugini service PX083/PX082 on Wed/Sun, the Port Moresby-Wewak-Vanimo- Jayapura PX028/029 operating on Sundays, and the Cairns-Port Moresby PX099 departing Cairns at 0715 and arriving Port Moresby 0840, and PX098 Port Moresby-Cairns departing POM 1335 and arriving Cairns 1500 on Wed/Fri also provide good chances to hear an F28. Yet another F28 possibility is the Biman Bangladesh service between Bangkok-Yangon-Chittagong-Dhaka on Thursdays. BG084 Dhaka-Chittagong-Yangon-BKK departs Dhaka at 1100 arriving BKK at 1630, while the return BG085 departs BKK at 1715 arriving Dhaka at 2055. In Africa, two airlines which may provide shots on HF are Air Mauritanie and Air Gabon. Air Gabon operate a number of domestic flights with the F28, but they also operate a number of flights for the Congolese national airline Lina-Congo. Late night Libreville-Pointe Noire (Congo) flights operate with Lina-Congo flight numbers and callsigns on Mondays GN/GC882 and Fridays GN/GC888, and GC/GN887 flies back after a short turnaround on Fridays. Flight number 882 departs Libreville at 2100 arr Pointe Noire 2210, 888 departs Libreville 2200 and arrives 2310. Flight 887 departs Pointe Noire for the return to the Gabonese capital at 2000 and arrives 2110. Remember that all times listed herein are local time only. And with that we close yet another edition of International Civil Aero. Your contributions are always welcome here, and if you'd like to see a subject covered here that you think others would find interesting, please give one of us a shout. Thanks to all who took the time to contribute this month and we'll see you again next month with WUNNEWS....73 from Reston and Weston

know who you are. Especially our mysterious donor of US$100.00! With our recent move to grove.net saving us even more thanks to the generous donation of listserver space by Grove Enterprises, we have funds to last us over three years with increased www size and ftp availability. We have some other plans in the works to help fund the list and other internet services of the club. A big Thanks to all who chipped in. I see WUN continuing to gain members as more and more ute folks find out about us. I would hope that more of the members become involved in sharing what they hear. Only about 12% share logs right now as an example. It may be 'local' to you, but a great 'catch' to others! Thanks to all who have contributed. I'm sure all the members share in my thanks to the staff and editors who devote a great deal of time to bring you these services and monthly newsletters. Now on with the show.... Rick "RD" Baker

==========

MEMBERSHIP NEWS Mike Wolfson, Membership Director mwolfson@bright.net

Welcome to 1996. Where does the time go? Its hard to believe that we're celebrating out first anniversary already. From very modest beginnings we've grown into an international group with hundreds of members.

The latest membership statistics are very impressive. As of the beginning of January, WUN had a membership of about 746. This is broken down as follows: 489 members are subscribed to WUN. We have 167 people subscribing to the WUNNEWS list and 30 people subscribing to WUNDIGEST. Tim Braun's having computer problems, so I don't know how many copies of the paper edition are going out this month, but it's around 30 now. There are about 30 members are various non-internet connected systems.

The country list of the membership continues to evolve. In one form or another, we have people from 26 countries represented in the membership. In addition to countries I've mentioned in the past, we also have members from Singapore and from Tunisia.

I would also like to thank those of you who have taken the time to respond to the membership survey request. Speaking of the survey, I've had a couple of requests for extracts of membership data for particular countries so that a particular member could contact other residents of the same country. I had to turn down those requests because of the pledge of confidentially we made when we originally asked for the information. It was suggested that I poll the membership and only

release the information for those members agreeing to allow it.

I decided not to do that, though, because of the problems of keeping track of the list of people willing to have their information released and because of what would happen to the information once it was released. As an alternative, I suggested that the interested individuals put out a general call so that anyone interested in responding could do so.

For anyone considering sending me their information, here is how to do it. The database management program I'm using can accept ASCII text. I am requesting that you answer each question on a separate line followed by a carriage return. Please do not include the question itself in the answer, just the information requested.

Here is the survey:

E-Mail Address
Name
Where you're located (state/Province, Country)
Main receiver(s)
Main decoding equipment (HOKA, JVFAX, etc)
Monitoring interests (aero, marine, etc)

That about covers things for January. I've been hearing reports that conditions have been improving lately. I hope that they're true. It definitely about time. Mike

INTERNATIONAL CIVIL AERO
Editor: Tony Orr, 11404 Turnmill Lane, Reston, Va, 22091-3618 USA
E-mail: anthony.orr@wdn.com or a.camus@ix.netcom.com
Fidonet: 1:109/236
Co-Editor: Peter Ivakitsch, 803-73 Widdicombe Hill Boulevard, Weston, Ontario, CANADA M9R 4B3 E-mail:peter.ivakitsch@westonia.com
Fidonet: 1:250/930

Welcome again to another edition of International Civil Aero, brought to you by those wacky civil aero guys Tony Orr and Peter Ivakitsch. In this month's column, WUN member Vic Gubbins takes over editing the NEW AND IMPROVED selcal column, SELCAL CORNER, which incorporates MYSTERY SELCALS with a new, expanded tie-ups section which we hope you'll enjoy. We round out this month with an enlarged AIRLINE NEWS section and a look at one of the hottest frequencies around right now, 5670! Thanks to our contributors this month Wim de Mol, Vic Gubbins, Sir Thompson's Gazelle, Jerry Green, Steve McDonald, John Charlton and yours truly the Eds...read on for more Civil Aero Excitement!!!

==========
More Unidentified Digitals
A request from John of London for the answer to a long standing decode mystery. In last months WUN newsletter Mr Chinsky of New York reported signals on 10627 and 11155.
Well these same signals have been monitored by John for the last 8 years and he can add further to the mystery. There are always two transmissions on the air at the same time the first on, 6917, 8030, 10600, 11155, 13595 or 15815 and the second on 7682.5, 9245, 10627, 10885.5, 13913 or 16280 KHz. Each of these frequencies are the assigned frequencies with actual carrier at 1.5KHz below in each case.

Normally both stations use frequencies in the same part of the spectrum and are of the same strength. From this it is reasonable to assume that they are being transmitted from the same site.
There could be even more frequencies on which they transmit and in previous years, when reception conditions were better, John has heard them 24 hours a day on one or other of those listed above. It has been suggested that the two stations transmit in parallel but John has heard one station idling unkeyed whilst the other was keyed. This suggests that they are not in parallel. These transmissions are always encrypted and use pseudo-random encryption at 75 baud, plain language has not been seen even for SVCs. The type of transmission is 6028 series FDM VFT.
Comparison with other signals in known locations of the World has failed to even hint at the location of these transmissions. Help please, from all you digital Wuners out there. Who is it ?

(Continued from previous message)

20.000 square-meters within the hour. The vehicle was introduced in the VN-white colors and can be used to clear a complete battlefield from mines and unexploded ammunition by grinding the soil to a depth of 50 centimeters. The changing of the "roller" only takes up to 10 minutes. The Norwegian relief-organizations showed great interest for the de-mining activities in Cambodia, Northern Iraq, Mozambique and Angola and has placed the first orders.

The Swedish Army is in for mobility, not only is the 40L70 AA-canon mounted on a 6 x 6 terrain vehicle, also the 105mm FH-77 AA-gun from Bofors is now mounted on a 6 x 6. These vehicles have an extensive navigation system on board and can, beside the crew, take 24-granates on board. The FH-77B is capable of firing 3-granates in 13 seconds (!) but over a long period this fire speed drops to 8 granates per minute. The maximum firing-distance is 30 Km.

U.S. AIR FORCE: The C-17 US-military air transport has reached its operational status just before the air-lift to Bosnia. The Pentagon decided to order 80 C-17 airlifters on top of the 40 planes already ordered. The fact that 8 C-17's take up as much room, on the ground, as 3 C-5's or Boeing 747's played an important role in the decision.

U.S. ARMY: The U.S. Army recently accepted delivery of its 50th RC-12 Guardrail signals intelligence aircraft-an RC-12P that employs fiber optics for all data, commands and audio distribution.

A couple of U.S. Army watercraft recently identified are:

USAV MG Nathanael Greene (LT-801) -- AAFB
USAV COL Seth Warner (LT-806) -- ADTK

Both vessels were recently heard underway in the vicinity of Charleston, SC. These "large tugs" are both based out of Ft. Eustis, VA.

Mike Sullivan passes along a Web site with info on U.S. Army communications. Lots of interesting material on Army commo units around the world. It is: http://www.gordon.army.mil/roa/active_units/world.html

U.S. COAST GUARD: The USCG announced in late December that the Differential Global Positioning System (DGPS) is expected to be operational for navigation and positioning in January 1996. DGPS is the regular Global Positioning System (GPS) with an additional correction signal. The service being deployed by the CG will soon consist of 48 DGPS broadcast sites providing

coastal coverage to the continental United States, the Great Lakes, Puerto Rico and portions of Alaska, Hawaii and the Mississippi River.

For a wealth of interesting information about the U.S. Coast Guard, check out retired Coast Guard Communications Warrant Officer Fred Siegel's Web page. Fred used to be the detailer for Radiomen (i.e., he assigned all Radiomen their duty station orders around the globe). As a matter of fact, he gave your author his first set of orders to RADSTA GUAM/NRV - exactly the assignment he wanted. Check out Fred's Place at:

http://www.cris.com/~fsiegel/home.html

You can also email him at fsiegel@cris.com for more info on his homepage. He also passes along the Web site address for the TV show "Coast Guard The Series." Have a look at:

http://www.tamcomm.com/CGTV.html

And why not have a look at the Coast Guard's own page. You can find it at:

http://www.dot.gov/dotinfo/uscg/

Mike "Smitty" Smith, QSL manager at USCG CAMSLANT Chesapeake/NMN, passes along the latest info sheet on his station:

NMN
COAST GUARD COMMUNICATIONS AREA MASTER STATION ATLANTIC

COAST GUARD CAMSLANT CHESAPEAKE VA/NMN RECEIVER/OPERATION SITE IS LOCATED IN CHESAPEAKE VA WHICH IS ON THE VIRGINIA AND NORTH CAROLINA BORDERS (36-36.57N/076-15.25W). CAMSLANTS TRANSMITTER SITE IS LOCATED IN A REMOTE SECTION OF VIRGINIA BEACH KNOWN AS PUNGO (36-43.43N/076-00.36W). CAMSLANT ALSO REMOTELY CONTROLS TRANSMITTERS/RECEIVERS IN MIAMI FL. CAMSLANT'S MISSION IS TO PROVIDE LONG RANGE COMMUNICATIONS SERVICES TO COAST GUARD VESSELS, AIRCRAFT, NATIONAL OCEAN AND ATMOSPHERIC ADMINISTRATION (NOAA) VESSELS, WORLDWIDE MERCHANT FLEET AND U.S NAVY VESSELS. CAMSLANT ALSO PROVIDES WEATHER BROADCASTS, MARINE INFORMATION ADVISORIES AND DISTRESS COMMUNICATIONS TO THE BOATING PUBLIC.

CAMSLANT USES THE HARRIS R-2368/URR RECEIVER WITH A VARIETY OF VERTICAL, HORIZONTAL, AND LOOP ARRAY DIRECTIONAL ANTENNAS. CAMSLANTS TRANSMITTERS CONSIST OF THE COLLINS HF-80/HARRIS 7405 TRANSMITTERS FOR HIGH FREQUENCY VOICE, SITOR, AND RTTY COMMS USING 5KW AND TWO NAUTEL NX 5000TT/6 MEDIUM FREQUENCY XMTRS FOR NAVTEX MODES UTILIZING A VERTICAL ANTENNA. CAMSLANT ALSO HAS ONE RECEIVE AND TRANSMIT ROTATABLE LOG PERIODIC ANTENNA WHICH IS USED FOR DIRECTIONAL COMMUNICATIONS SUPPORT WHEN REQUIRED.

USING A GENERAL COVERAGE RECEIVER YOU CAN LISTEN TO NMN ON:

CIRCUIT (HF)(USB) TRANSMIT RECEIVE
AIR TO GROUND(VOICE) 5696.0KHZ 5696KHZ

Rafales, South African choppers and the Swedish Army. The material was forwarded by Ary Boender.

SPECIAL OFFER: I have a copy of the extensive information package produced by the U.S. Department of Defense concerning U.S. involvement in the Bosnian peacekeeping effort. Although it is much too large to present here, if you'd like a photocopy (about 20+ pages), I'll be happy to send it to you. Just send me your snail mail address by direct email to KH2AR@aol.com, and I'll pop a copy into the post to you.

73s and gud DX to all.

Utility Monitoring in the Maritime Bands
Editor: Jim Pogue (kh2ar@aol.com)
P.O. Box 3888
Memphis, TN 38173-0888 USA

Welcome to the January Nautical News column. Lots of information to share this time, so let's have a go at it.

* Six former American President Lines containerships, recently purchased by the Matson Navigation Co., have been renamed. The new names were chosen to be representative of the Pacific islands they serve. Here's the lineup.

Old name New name Type vessel

President Washington/WHRN Mahimahi C-9
President Lincoln/KDBG Manoa C-9
President Monroe/WNRD Mokihana C-9
President Hoover/WTST Lihue C-8
President Tyler/WEZM Ewa C-8
President Grant/WEZD Chief Gadao C-8

If the FCC follows their usual practice, the callsigns will not change in spite of the name changes.

* The Russian-flag M/V Kovrov has become the first Russian container vessel to call at the Port of San Diego. It's owners, South Pacific Container Line, have signed a contract to make monthly port calls there for the next five

years. This may present a good opportunity for DXers to QSL a Russian merchant ship by sending their report to the vessel's San Diego agent.

* Korea's Samsung Shipyard at Koje has delivered it's first vessel, the Yukong Navigator, to Amaryllis Shipping SA. The vessel is a single-hull tanker.

* Japanese shipyards have delivered two new bulk carriers. They are the Asian Nova to Mars Shipping Co., Inc., and the Cape Jacaranda to the "K" Line.

* Cruise ships just keep getting larger. Princess Cruise Line's 856-foot-long, 77,000 ton Sun Princess, delivered last November, is currently the largest vessel of its type afloat. That record will soon be surpassed when Carnival Cruise Lines takes delivery of the Carnival Destiny later this year. Princess also plans two more mega-ships in the next few years. The Dawn Princess will be a sistership to the Sun Princess, and the Grand Princess will weigh-in at a trim 104,000 tons.

* A growing number of cruise ships are also entering or returning to the Alaska trade. Here's who will be in northern waters in 1996:

Cruise line Vessels

Holland America Ryndam, Westerdam
Royal Caribbean Song of Norway, Legend of the Seas
Crystal Cruises Crystal Symphony
Cunard Sea Goddess II

Princess Cruises will also place six of their ships in Alaska this year.

* The new Royal Venture Cruise Line expects to enter the Western Caribbean trade in March when their recently refurbished Sun Venture is ready. This vessel was previously named the Gruziya. Another vessel, the Azerbaizhan, will be acquired and renamed the Star Venture. Both vessels are owned by the Black Sea Shipping Co., and are being taken on a five year lease. A third ship, already renamed the Sea Venture, is in Greece where it is expected to be completed over the next 18 months.

* Radisson Seven Seas Cruises has signed a contract to manage a new 320-passenger deluxe cruise ship tentatively named the Paul Gauguin. Delivery is expected near the end of 1997, and the vessel will serve in the South Pacific trade. Radisson already manages the Radisson Diamond, Song of Flower and Hanseatic.

* Commodore Cruise Line will charter the 739-passenger Enchanted Seas to the University of Pittsburgh for the school's "University Afloat" program. It will replace the 43-year-old Universe, which will be sold to Orient Overseas Holdings, Ltd.

* Disney Cruise Lines has announced its first cruise liner will be named the

(Continued from previous message)

Disney Magic. It is to be delivered in early 1998. The vessel will offer three and four-day cruises from Port Canaveral to one Caribbean port of call and to an island in the Bahamas that Disney is purchasing outright.

* Carnival Cruise Lines has chartered its vessel, the TSS Festivale, to Dolphin Cruise Line. Dolphin, in turn, has renamed it the SS IslandBreeze, and will begin two-and five-night cruises from New York In May of this year. The vessel entered service in 1961 as the S.A. Vall, and was acquired by Carnival in 1977.

* The U.S. Maritime Administration (MarAd) has given Lykes Brothers Steamship Co. the OK to terminate the current voyage of the Thompson Lykes in Haifa, Israel, following major repairs. It has also given Farrell Lines, Inc., the nod to charter and operate a foreign flag vessel as relief for their Export Freedom while it undergoes a drydocking period in 1996. The name of the relief vessel was not announced.

* Maritime Reporter & Engineering News has announced their "Great Ships of 1995." Here is their list of winners:

Vessel name Type Owner

London Glory Tanker London & Overseas Freighters
Hual Trooper RoRo Car Carrier Leif Hoegh & Co.
APL Japan Containership American President Lines
Heidrun Shuttle tanker Conoco/USA
Rhine Containership MOL Euro-Orient Shipping
Murex VLCC Shell Intl. Shipping Ltd.
Hai Wang Xing Self-unloading Chinese National Machinery
bulk carrier Import and Export Corp.
Lista Product tanker Mowinchel Kysttanker AS
Hanjin Pyeong
Taek LNG carrier Hanjin Shipping Co., Inc.
Cable Innovator Cable ship Cable & Wireless
Atlantic Liberty VLCC Exceed Shipping
Eeklo LPG Luxembourg flag

* WUN member Ken Bell in Nova Scotia sends along the following intercept. Perhaps someone across the pond can help him in his search for more info and QSLs.

"I live in Lunenburg NS (a small town 60 miles south of Halifax) and wanted to report this catch on 518 khz at 0030 on Dec. 15:

" becoming variable 3/4 and southwesterly at the end. southern half:
northwesterly 3/4 increasing and backing westerly 4/5.stormy showers.

Ken is quite pleased with his first trans-Atlantic catch (with good reason)
and would like an address for EAF, Finisterre Radio, Spain, so he can shoot
for a QSL. Contact Ken Bell (kbell@ra.isisnet.com)

* And finally, in case anyone missed them, here are a couple of interesting
item that appeared recently on the WUN listserver:

From Andrew Brill in New Zealand, another HF marine station bites the dust!

ZMH98 Kerikeri Radio will cease operation after the regular sked at 0700 UTC
on 31 Dec 95.

The station has been operating for the past 11 years and provided a valuable
communications and search and rescue service for small ships throughout the
South Pacific. The station recently provided comms for the small boat
flotilla protesting French nuclear testing at Muroroa Atoll and has been
involved in many major search and rescue operations over the years.

The station has been run on a voluntary basis by Jon and Maureen Cullen of
Kerikeri, New Zealand and the closure is due to ill health and lack of
funding.

And from Rick Albright,

According to Pacific Maritime magazine, Hapag-Lloyd has sold its 2,716 TEU
container ship NEW YORK EXPRESS to Hamburg-Sued, which is renaming the vessel
CAP ROCA. It will enter service between Europe and South America in March.
Both shipping lines have been good QSLers in the past.

That wraps it up for this month. DX has been pretty slow here, but hopefully
will pick-up soon. 73s, and keep those dials spinning.

NEW PRODUCT REVIEW

AIRPLOT: software by Douglas John Standen
John has brought us some great ute software before and has been one of the few around developing programs to be used by utility listeners. Now he has brought out an all new program here with AIRPLOT. Several of his former programs have been completely overhauled, and we shall review them next month. AIRPLOT is intended for worldwide real time tracking of aircraft reporting their position by HF SSB.
Installation was very easy taking just a few minutes overall. The program features a Windows style program with the main MENU along the bottom of the display, while others are available in a drop down OPTIONS menu and drop down boxes. AIRPLOT runs on 286/386/486 or Pentium systems and requires serial microsoft style mouse in com 1 to 4. I ran it in a Compaq Presario Pentium 90 under Windows 95 and a generic 386/20 under DOS with good results.
The program generates maps at any scale anywhere in the world. A digitized world map data base containing some 178,000 latitude/longitude points is included. Smaller areas may be generated and the blank screen overlaid. Once the map is ready, the program is set for real time tracking.
Once you have received your position report by radio you select PLOT.
This is a single line entry box. The report is then entered as received:
SPEEDBIRD123 50 00 N 30 00 W 1200 340 40 00 N 40 00 W 1245
SPEEDBIRD123 LINDA 1200 340 MIKE 1245
SPEEDBIRD123 50 00 N 30 00 W 1200 MIKE 1245
SPEEDBIRD123 LINDA 1200 340 40 00 N 40 00 W 1245
Military tracking users may enter an airspace block in the form 120-160 at the flight level input. The Reporting points will be converted to LAT/LONG if they are in the file, which can be added to. If an entry has been entered it will be checked for errors. An early error will just open the box again for re-entry.
Once you have an aircraft entered, a red dot will appear at the last position and a yellow dot at the next waypoint. Realtime drops a box that asks you to select A to track all your aircraft or S for speed and distance on a specific aircraft. 'A' starts the plotting, a white line runs from the last position to the present position with a star marking the aircraft. A white star indicates an Eastbound flight and a light magenta star a Westbound flight. The ident is shown and carried along with the plot.

If a level change is notified, select LEVEL and enter the ident and the new level, when you return to Realtime, the new level will be shown on the plot!
--
=====
PART 3 of 11

Options
CLEAR MEMORY: Removes the data holding information on the location of the waypoint stars.
LOAD FROM FILE: Loads data and shows the last waypoint red stars, if TRACK is selected ON. Holds the data in memory for map changes. Not required for REALTIME plotting.
REPORTING POINTS: Overlays all reporting points in the file RPT.PTS that apply to the current map.
DRAW: Should you wish to add an Island or any shape other than text, this function is available in any color 1 to 15.
MAP: Also available as an M from the keyboard. Reloads the current map, if a saved Map file. To change maps use SELECT, then MAP.
MARKER PEN: Once selected point the mouse cursor at the spot you wish to enter text and press the left button. You may then select the text color following which you should enter your text by the word TEXT: once entered, press <return> and the text will appear at the selected spot.
BLEEP: Causes the PC to bleep when an aircraft is within two minutes of it's ETA waypoint.
TRACK: Turns the tracking line on and off. The default value is TRACK OFF. Following selection you may also choose to turn the yellow ETA star ON or OFF. Default value star OFF.
CLEARANCE: Used for entering an oceanic clearance.
IDENTIFY: Enter the flight ident as: Speedbird001 or BA001 and press <return>. If the flight details are in the database then the owner and flight details will given. A file, AIRLINE.DAT holds the conversion from flight letters to airline, while FLIGHT.DAT holds the Timetable route information, IDENTIFY.DAT holds the flight names to timetable conversion. The last two files must be upgraded by the user.
CIRCLE: Draws a circle in white at the specified latitude and longitude.

AIRPLOT is a very extensive program. I have 'dabbled' with civil aircraft being stronger at "things that float". But after a few nights, I was banging away plotting everything in sight (or rather received -hi!). So I suspect even a novice aero buff could catch on fairly quickly. But what a blast to watch all these aircraft crossing the ocean on your screen in realtime! The various options designed with the aero listener in mind are great. John had some good input to this program from WUN's own Tony Orr. If your into aero listening, this program is for you.
Now as I write this column, John has been hard at it on a new version of AIRPLOT to be called AIRTRAK, but has a huge amount of extras over and above the old AIRPLOT. This version may already be released. AIRPLOT was 25 (UK pounds) and the new AIRTRAK will run 35 (UK pounds). Payment: Eurocheque or pounds:dollars conversion plus ten dollars in notes. Includes postage worldwide airmail. For more info, contact JHS SYSTEMS AND SOFTWARE, CROPTON,

PICKERING, NORTH YORKSHIRE, YO18 8HL (UK) or via e-mail at
john@metsys.demon.co

Next month we will review two of John's revised, updated, overhauled and
all new programs; Synoptic and Sea Plot.

1996 KLINGENFUSS PUBLICATIONS LINE-UP

I received the following new product release from Klingenfuss
Publications:

o The 1996 Super Frequency List on CD-ROM
"Now includes 8,500 entries for worldwide broadcasters". Also includes
14,500 frequencies from Utility Radio Station guide and 12,800 formerly
active SW frequencies. DM 60/pound 29/U.S.$45
o 1996 Guide to Utility Radio Stations
"Includes latest Red Cross and UNO frequencies". 14,500 frequencies.
DM 80/pound 38/U.S.$58
o 1996 Passport to World Band Radio
570 pages (broadcast) DM 50/pound 24/U.S.$38

For more information, write Klingenfuss Publications, Hagenloher Str.14,
D-72070 Tuebingin, Germany and ask for their latest catalog or check with
your friendly near-by distributor.

That's all she wrote for this month, next time, more software reviews,
and we have books and products scheduled down the road!

and 6917 kHz.

What did you hear in 1995 ?

Stan Scalsky browsed thru all our 1995 loggings -poor guy- <grin> and
figured out that the following modes were logged. He remapped some of
the odder labels into their more conventional names. For those who want to
know more about these modes, I strongly suggest that you get a copy of the
Digital FAQ version 2.0. I think that every digital dxer should have a one.
The FAQ is available from our WWW Home Page.

The WUN Military Column
Jim Pogue, editor (kh2ar@aol.com)
P.O. Box 3888
Memphis, Tn 38173-0888, USA

Hello and welcome to the first WUN Military Column for 1996. Lots of hot information for military monitors, so buckle-up and away we go.

BOSNIA: Although not purely military, Tom Sundstrom passes along this tip from that part of the world. The Hungarian News Agency was copied on 9114 kHz with press in English at 1700 UTC. He says his settings were 50/425/R on his M-6000. He adds that you can get press teletype listings from his "News You Can Use" page at http://www.pics.com/trs/news_use.htm

CHINA (Republic) NAVY: The Taiwanese Navy is not letting any barnacles form that might put it behind mainland China's navy. It is building seven more near-sisters to U.S. Oliver Hazard Perry-class guided missile frigates, is having built six La Fayette-class frigates in France, and is purchasing retired Knox-class frigates from the United States. One of them, the former-USS Joseph Hewes (FFT-1078) is now the Lan Yang (935).

FRENCH AIR FORCE: The French fighter "Rafale" is facing some rough times. The rising costs of the plane is reason for yet more criticism from the French
Air Force and the French government. Chief Air Force Staff said "the Rafale is currently using no more than 80% of its capability". Due to these high price-tag's the delivery of 234 ordered fighters will not begin until the year 2001/2. The French Marine (navy), which ordered 86 fighters will not receive any until the year 2005 where 1999 was the original delivery date.

GERMAN NAVY (Bundesmarine): The second Brandenburg-class 123 frigate, the FGS Schleswig-Holstein (F216)/DRAI was seen conducting sea trials last

September. It was expected to commission in December.

(Continued from previous message)

but technically by the seasoned utes. Time stations like WWV and CHU are easy pickings. But like fish that just don't make the grade with fishermen, these stations are not considered legit catches either by many listeners.
But rather than being categorical and talking about 'easy' and 'hard' stations, it might be better to put it in terms of 'good', 'fair' and 'poor' ute QSL'ers. What was an easy verification for one ute might be a difficult catch to another a little later. Sometimes luck or other unforeseeable factors are all that make the difference.
The Canadian and U.S. coast guards are regarded as 'reliable' QSL'ers. Their weather broadcasts (such as those of NMN Commsta Portsmouth), heard regularly over HF and intended for the public, make first-rate targets for QSL's. On the other hand, the same stations working classified traffic are far less likely to be verified. Remember that it is very important that proper ute QSL procedures be used. Unless it is a volmet (aero weather) or other broadcast of information intended for public use, you should only state in your report who was in contact with whom, at what time UTC, what frequency and in what transmission mode. NEVER should a person's name be quoted as a means of identifying the transmission. Remember that utility stations are likely to regard you as a 'snoop'. Explaining your hobby briefly can help.
As a rule, do the following for every station you QSL. For stations in the U.S., or U.S. military and coast guard, send your own PFC and SASE. For those outside the U.S., send PFC, mint-stamps (covered in next month's column), and an adhesive label on which you've typed out your return address. Standard sizes for envelopes and stationary may vary throughout the world -- their stationary may not fit your envelope -- so it's better to be on the safe side by giving them the option of using your label. (In fact it might not be a bad idea always to send a prepared address label either in or outside the U.S.) Some of the envelopes and stationary sent back to you can themselves become quite attractive collectors items. From certain shipping companies, and some warships for example.
A quick scan of a ute QSLer's files reveals that warships aren't heard from that often. However the Australian and Royal Navy are said to be darn good sports in verifying reception reports. The same would seem to be the case with military shore stations.

Until next month, try a little QSLing, and 73.

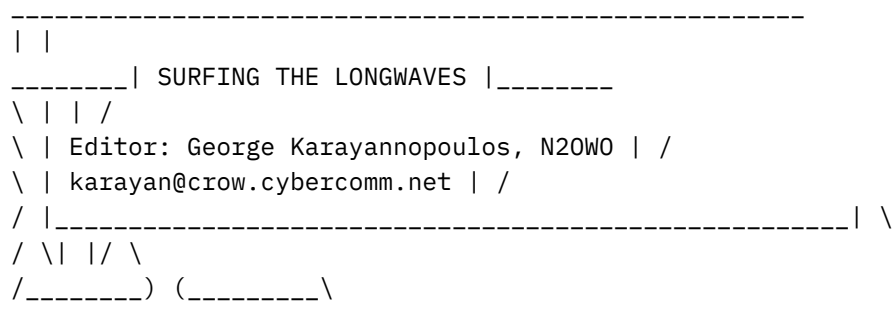
==========



BEACONS WUNTED
This issue marks the first anniversary of WUN. Congratulations are due the other editors of the newsletter for a great job done! Also, kudos to all who posted on the WUN mailing list and have made WUN the great club that it is! I think that we have demonstrated beyond the shadow of any doubt the usefulness of Internet to a hobby such as ours.

In order to celebrate the first anniversary, this column joins the festivities by introducing a new feature. It will be a running list of all LF stations that WUNers have heard, but are unable to identify. I call it the WUNTED list (for "wanted" list -- get it? OK, OK, so _YOU_ suggest a better name :-) If you have any station you need identified, let me know. I will place it on the list until someone identifies it for us. Send me as much info about the station as you have. Date and time heard might be important, a bearing, ID period and other details, everything helps. Even if you are not sure about the ID, someone may be able to suggest what you MIGHT have heard. It has happened to the best of us.

This list will serve us better than simple posts on the WUN list. As long as nobody can identify your station, it remains on the list, until someone comes across a reference for it and can identify it for us. Without the WUNTED list, you would have to keep posting your unid's on the WUN list periodically, which wastes bandwidth. So keep looking at the list.

Take a look at the first appearance of the list, below. If you don't know the ID of these stations, try to listen for them. If you catch them too, take a bearing and any other signal info you can and send them to me. The more we know about the station, the better.

On the other hand, if you know any of the listed stations, or can find it in your references, let me know. I will identify the station in the column and remove it from the list. It is important to let me know directly (as opposed to the WUN mailing list), so that the WUNTED list will be kept up to date.

1944. kHz Scanners 13/79

Newsgroup: rec.radio.scanner
Date: 1996-01-23 00:00:00 UTC
From: Roger_Cravens@fforum.blkcat.com
Message-ID: <NOMSGID_1=3A109=2F239.0_960123_205600_e87b05da@fidonet.org>
Source record: 241803

Subject: kHz Scanners

(Continued from previous message)

MILITARY AIRCRAFT: The latest Harrier "jump-jet" is named the GR7 and is still the only operational VSTOL-plane that has got extra night-operation heat-sensing equipment. The GR-7 has 9 weapon-attach points - 2 are reserved for the sidewinder missile.

MILITARY INTELLIGENCE: John Pike recently posted what is called a "Comprehensive Guide to Intelligence-related Resources on the Web." Much of the information is anti-military, but it still makes for some interesting reading. He says a good entry point is

http://www.fas.org/pub/gen/fas/irp/intelwww.html

Some other sites he mentions are:

Federation of American Scientists:
http://www.fas.org/pub/gen/fas/

CyberStrategy Project:
http://www.fas.org/pub/gen/fas/cp/

Intelligence Reform Project:
http://www.fas.org/pub/gen/fas/irp/

Military Analysis Network:
http://www.fas.org/pub/gen/fas/man/

Space Policy Project:
http://www.fas.org/pub/gen/fas/spp/

MOROCCAN NAVY: The French Leroux et Lotz Naval has delivered the 210-foot long offshore patrol vessel Rais Bargach to the Moroccan government. It is the first of four to be delivered to the North African country.

NASA: NASA has issued a draft Cooperative Agreement Notice for the design, fabrication and flight test of the X-33 advanced technology demonstrator -- the next step in development of a new generation of reusable launch vehicles that will dramatically reduce the cost of putting payloads into orbit.

"We are seeking comments on the draft notice by Jan. 22, 1996, from industry and any other interested parties," said X-33 project manager Gene Austin. "We will consider these comments before issuing the actual Cooperative Agreement Notice in April 1996."

The April notice will solicit proposals for a joint government and industry effort to demonstrate single-stage-to-orbit technologies by means of

the X-33. Three aerospace companies -- Lockheed Martin Skunk Works, McDonnell Douglas Aerospace and Rockwell International Corp. -- have been working with NASA since March on concept definition and design of the X-33 in Phase I of the program. NASA will select an industry partner to work with in Phase II, in which the X-33 will demonstrate vehicle reusability and operability concepts that assure low cost operations and rapid processing for reflight. Phase II will culminate in flight testing of the X-33, beginning in early 1999.

"X-33 is an experimental program intended to determine if single-stage-to-orbit will work," Austin said. "It will give government and industry the means to decide by the end of this decade the feasibility of developing an operational next-generation reusable launch vehicle. That development, if it occurs, will be led by industry."

NASA and industry will share costs during Phase II of the X-33 program, with NASA budgeting a total of over $900 million in expenditures through 1999. The amount its industry partner will invest is to be determined.

Industry proposals will be due mid-May 1996, and NASA expects to select its industry partner by July, subject to approval from the White House to proceed into this next phase of the X-33 program.

The X-33 draft Cooperative Agreement Notice is available in the NASA Acquisition Internet Service at:

http://procure.msfc.nasa.gov.

ROYAL NEW ZEALAND NAVY: New Zealand launched the first of two ANZAC-class frigates, HMNZS Te Kaha (F77), in July of 1995. It is expected to commission in March of 1998. Australia is also building a total of eight sisters in continuing efforts to modernize its navy.

SOUTH AFRICAN DEFENCE INDUSTRIES: The South-African attack-helicopter "Rooivalk" seems to become a big success. On the basis of the Puma-helicopter that was licensed to South-Africa the Rooivalk and a transport-helicopter named Oryx was developed. The fact that there were no Hellfire-rockets available for the Rooivalk, made the British army decide not to buy them. The answer for the African attack-helicopter-project came as the "Mokopa," a low-cost hellfire-clone shown at the Dubai air-show late 1995. This laser-guided missile seems to be a good alternative for the hellfire and there is serious interest for ordering these systems by the Arabic and Asian governments. The "Suid Afrikaanse Lugmag" is expected to order 16 rooivalk's.

SWEDISH DEFENSE INDUSTRIES: The Swedish firm Bofors introduced a new demining vehicle. The system is based on a German Leopard-1 tank-frame and has a "roller" in front which has his own engine and is capable of demining

| ZLS 526 NE USA Period 10 sec |
| PX 1638 NE USA MF beacon |
__|_____________________________________________ |
/ / |
\_____________________________________________\__/
```

After I assembled this first version of the list, I began looking through my
own references to try to ID these stations. Here is what I found:

CB 289 kHz QTH: Cape Henry LS, Virginia, USA.
2R 373 kHz QTH: Tyendinaga Mohawk, Ontario, Canada.
YRR 377 kHz QTH: Greely, Ottawa, Ontario, Canada; ex-R; power 22 watts
(tnx Lowdown and rkdx@aol.com).
D9 383 kHz QTH: Huntsville, Ontario, Canada.
3B 391 kHz QTH: Brockville, Ontario, Canada.
GAS 420 kHz QTH: Gallipolis, Ohio, USA.
PPA 450 kHz QTH: Puerto Palta, Dominican Republic.
TVX 521 kHz QTH: Greencastle, Indiana, USA.
ZLS 526 kHz QTH: Stella Maris, Bahamas.

PX 1639 kHz (reported as 1638 on the list) MEDFER beacon, operated by David Holland, in Berlin, Maryland, USA. David also operates LOWFER beacon DCH on 187.335 kHz.

Several of these came from previous issues of the Lowdown. Yet, the transmitter location is the bare minimum info for a station. I would appreciate any more details on these stations, such as what kind of beacons they are, their latitude and longitude, power, etc.

So, we already have several identified. These will be removed from the list, and replaced with the ones YOU send me. So keep'em coming in!

When submitting a new listing, let me know as much as you can about the station, including YOUR location.
***
OTHER BUSINESS
First the bad news. Due to a major glitch in my Internet provider's system, I lost all my old mail. So, if you have written to me asking for information, or for any of our files, and you have not heard from me, please send me mail again. This time, I will make sure to save it on multiple floppies, distributed among different physical locations, and enclosed in fire/flood/hurricane-proof shelters. My address remains the same: karayan@crow.cybercomm.net
***
Needless to say, successful radio monitoring depends on timely information. We have an ongoing project of assembling a definitive list of LF resources, regardless of medium. So far, thanks to dedicated WUNers, I have gathered the obvious paper-based info sources, and some not so obvious. Those of you who closely monitor the WUN mailing list have noticed the recent postings regarding resources on the Internet. There are at least two WWW URLs that allow you to search for North American aerobeacons. The URL of one is:

http://www.cc.gatech.edu/db1/fly/navaid-info.html

The other has been reported to us by Kevin Carey, of Monitoring Times fame. Unfortunately, with the loss of my mail, I lost that URL too. I would appreciate it if someone could send it to me. Kevin's site is superior to the one listed above, in that it allows search by frequency, a feature that is not useful to pilots, but can be critical for beacon hunters.

For those with no access to the Web, and for the hardy souls who want to write their own search code, raw data from the US Federal Aviation Administration (FAA) can also be FTPed anonymously from:

aviation.jsc.nasa.gov

with the path being: /pub/fly/data/ or from the Web, via the URL:

ftp://aviation.jsc.nasa.gov/pub/fly/data/

There are a couple of files that you will want to download.

(Continued from previous message)

Regarding this data, I am working on a new search mechanism that may offer some exciting possibilities. More on that in the near future.

Last, but not least, we have our own files. I have not yet had the time to work on them. If there are any volunteers, let me know.

If you have ANY suggestions for what should go into that list, however obvious, let me know. When this list of LF resources, both on paper and the Internet, reaches a semi-stable form, I will post it on this column, and make available on the Web site. We can then add any new resources, as we come across them.
***
HAARP

For those of you interested in the HAARP project, check these resources out:

http://server5550.itd.nrl.navy.mil/projects/haarp/haarpIndex.html

which is HAARP's own homepage, with NEAT antenna pictures. Don't you WISH you had an antenna farm that closely resembles the one at http://server5550.itd.nrl.navy.mil/projects/haarp/HaarpSite.html ?????

Some VERY interesting stuff on "Communication through Ionospheric Modification" from Penn State University is listed at:

http://www.arl.psu.edu/general/hotsheet17.html

These guys are working with HAARP, doing some HF prop monitoring! So who needs sunspots anyway?

For the more technically minded WUNers, the Norwegian EISCAT site:

http://seldon.eiscat.no/heater.html

seems similar to HAARP and describes their ionospheric heating work. Hmmm...

HAARP-related discussions, on all sides, have taken place in various newsgroups; among them: sci.military.naval, sci.physics.electromag, and of course, all conspiracy-minded newsgroups. Search DejaNews, or your favorite news search engine for detailed articles.

UTILITY ROUND-UP
[editor: Ary Boender (ary@bitbike.iaf.nl 2:283/512.24)]
[Lobeliastraat 33B, 3202 HR Spijkenisse, the Netherlands]

Hello and welcome to our first birthday party. This month I have the final part of the Radio Navigation Signals series for you. That means that we're back to normal next month :-) Is there anything that you want to read about in this column, just yell and I'll see what I can do for you. Enjoy and party on ! See ya next month. -Ary-

Radio navigation signals, part 3
==========
In the final part of this series I'll cover DECCA, MARS-75, (D)GPS and everything what is left. Comments and supplements will be included in next month's column. So, keep the info coming.......

Decca Navigator System

The DECCA navigator system is a high accuracy navigational aid intended for coastal navigation. It operates as a continuous wave phase comparison system on LF. Each Decca chain consist of a Master station and two or three slave stations, resp. Red, Green and Purple. The slaves are located between 60 and 120 n.miles from the master. The accuracy of this system depends amongst others on the distance from the transmitters, the time of the day and the season of the year and give the position within 50 meters under favorable conditions up to 100 n.miles from the Master station. Although GPS is rapidly winning territory, there are still 30 chains left around the world; 2 in Japan, 1 in India, 1 in the Persian Gulf, 5 in South Africa and 21 in Western Europe and Scandinavia. During the last 4 years many chains have disappeared, being replaced by GPS. Just recently the two Spanish chains closed down.
So how does it sound ? It sounds like very slowly transmitted Morse, like a beacon. You can hear patterns of dots and dashes. Combinations of dots and dashes or dashes only. Just tune in on the frequencies and you'll know what I mean :-)

DECCA chains.
Sequence: country, name and number of the chain, followed by resp. the Master station and the Red, Green and Purple slave stations.

Japan
* Kyushu chain (7C)
Maebaru, Kamiagata, Nagisima, Seto
* Hokkaido (9C)
Biei, Akkeshi, Wakkanai, Oshamanbe

Persian Gulf
* S. Persian Gulf chain (1C)

U.S. NAVY (Military Sealift Command-MSC): MSC's military tanker fleet, which was operated under a long-term charter arrangement by International Maritime Carriers of New York until 1994, has been sold to foreign interests. Here's the disposition of the fleet:

MSC Vessel New name Notes
USNS Sealift Antarctic Renata II Panama flag

USNS Sealift Arctic Vandou
USNS Sealift Pacific Patty Ann Sold to Patricia Navigation
USNS Sealift Atlantic Mavra
USNS Sealift Caribbean Santa Chiara Sold to Sta. Sofia Maritime
USNS Sealift Mediterr. San Marco
USNS Sealift China Sea San Ambrogio
USNS Sealift Indian Ocean Santa Anna

The vessels have been replaced by a number of private tankers, including the Duchess, Patriot and Courier. The New York Sun has also been brought into the MSC fleet.

The coastal minehunter USS Cormorant was christened recently by Avondale Industries. It is the seventh of a class of 12 vessels. It is 188 feet

long, has a glass reinforced plastic hull and is the first class of ships designed solely for minehunting for the U.S. Navy.

The U.S. Navy's seventh Aegis destroyer, USS Benfold (DDG-65) was delivered by Ingalls Shipbuilding on December 4. The Benfold is the first U.S. Navy ship to be built form the keel up with habitability modifications necessary to fully integrate women into its crew. Of a crew of 330, 46 are women.

Dave Alpert passes along the Web site for the U.S. Naval Observatory. It is: http://tycho.usno.navy.mil/time.html

1948. kHz Scanners 27/79

Newsgroup: rec.radio.scanner
Date: 1996-01-23 00:00:00 UTC
From: Roger_Cravens@fforum.blkcat.com
Message-ID: <NOMSGID_1=3A109=2F239.0_960123_205600_20b9e85d@fidonet.org>
Source record: 241807

Subject: kHz Scanners

(Continued from previous message)

A report from New Zealand states that the Radio Frequency Service of the Ministry of Commerce, who are responsible for all NZ frequency allocations, confirms that a QPSK station on 1818.6 kHz is a NZ navigational station. The station is located in the lower North Island.
The same kinda stations were reported from the Mexican Gulf area, from the Canadian East Coast, from the Mediterranean area and from Western Europe and Scandinavia. Check the frequency range from ca 1700 to 3000 kHz. Most US and Canadian loggings were between 1800 and 2100 kHz.

GLONASS

The Russian counterpart of GPS is GLONASS, an acronym for GLObal NAvigation Satellite System. Full deployment of the system (up to 24 satellites) was completed last year. A modernized version of the satellites is on its way. The Russian Space Forces plan to start flight tests of new GLONASS-M program in 1996. The new GLONASS-M satellite will have higher guaranteed period of service (5 years instead of 3 at the moment) and better characteristics. This enable to increase the reliability and accuracy of the system as a whole. GLONASS operates between 1602.5 and 1615 MHz.

Like GPS, GLONASS also needs a differential system to get better results. The research started way back in the seventies at about the same time that GLONASS itself was developed. However, due to various reasons an implementation of differential GLONASS (DG) in Russia was delayed. So far only one DG station has been reported and that one is in the Ukraine, not in Russia. A lack of the Selective Availability mode in GLONASS played a not unimportant role in the process. The standard accuracy of GLONASS on the few ten meters level met the requirements of common users in Russia. During the past couple of years however, the interest for DG has increased rapidly. Therefore, the development of differential stations for various applications has been speeded up. At present, there are the plans for the creation of local-area differential systems (LADS) and regional-area differential systems (RADS) for air traffic control and vessels. A third system WADS (wide-area differential system) should cover the whole of Russia.
=====
Try these.....

Here is a short list of stations. It is only the top of an enormous iceberg. I also included a few longwave stations. Both MSK and QPSK stations are included.

```

(Continued from previous message)

*) the British stations provide this service for a subscription fee,
whereas most countries provide this service for free. The British
DGPS data is coded.

...and what is left
---
o BATHYMETRIC NAVIGATION is the art of establishing a geographic position
on the open sea by use of geological features of the ocean floor. The
transmissions can most probably not be heard on land, therefore only a
short note about this system.
The ocean bottom features are like mountains and canyons on dry-land.
By measuring the depth of the sea and thus visualising the seamounts,
trenches, etc. you can plot an echo sounder trace. There are bathymetric
charts available for many seas and there are special coastal charts. By
comparing the trace and the bathymetric chart you can discover your
position. All you need is an echo sounder (also 'fathometer'). The echo
sounder consist of two basic components, the transducer and the recorder.
The transducer is located at the keel and transmits the signals into the
sea and picks up the returning echoes. The recorder records the echoes
for chart plotting purposes. The US Navy uses the AN/UQN4 sounder, which
is transmitting on 12 kHz. CW electromagnetic signals are translated in
pulses by the transducer. Pulse duration and repetition cycle are variable.

o MARS-75 is the Russian answer to DECCA. This Soviet made system is also
a hyperbolic LF system, but more advanced. MARS-75 was first used in the
early seventies and is still in use. The former Baltic chain was closed
down after the fall of the USSR. The transmitters in Wismar (E.Germany)
and Tallinn were dismantled. There are still chains along the western and
northern coasts of Russian like the Gulf of Finland and the Barentsz Sea.
MARS-75 operates in the 64-92 kHz range. The transmitters are arranged
in groups of three or four. Spread-spectrum signals are used and there
are nine clusters. At the moment some 47 transmitters are still running.
A modernized version, LENA, will probably never come in operation because
satellite systems are taking over most of the terrestrial systems at the
moment.

o RANA. Another system, somewhat similar to MARS-75, is the French RANA
system which operates along the French coast in the frequency range
285-415 kHz. It is a complicated, time-sharing system.

o DECCA look-alikes. The following systems are most probably no longer
in use: DEL NORTE TRANSPONDER, MINI-RANGER, AUTOTAPE DM-40A, RALOG-20,

ARTEMIS III DART. They were all based on the DECCA system and operated on LF.

o RAYDIST. This is also a 2 MHz system similar to Hyperfix. The latest version of this system was the 'DRS-H /T' who needed four landstations. There are no current European users but there may be some chains in the USA.

o TORAN P100. Another 2 MHz system is TORAN, a French made system somewhat similar to differential Omega. It is hardly used anymore.

o ARGO. The U.S. DM-54 ARGO (Automatic Ranging Grid Overlay) system was originally designed for the positioning of underwater pipelines. This is also a 2 MHz system and was last heard in the USA in 1993. It is possible that there still is a chain for the Mexican Gulf.

o PULSE/8. This one is based on LORAN-C and works very similar. It also operates on 100 kHz and seems to be more accurate, especially at night. There is a slight difference in the impulse codes which makes that the system is not compatible with LORAN-C. PULSE/8 is reportedly still in use, but I have no idea where....

o VHF/UHF systems. Both SYLEDIS and MAXITRAN operate between 420 and 450 MHz and need two landstations. Maxitran's predecessor SHORAN is still in use and operates between 220 and 300 MHz. RSBN, a Russian satellite system, is slipping away after the introduction of GLONASS. Frequency range: 873.6-935.2 MHz and 939.6-1000.5 MHz. The aero navigation systems TACAN (960-1215 MHz) and VOR-DME (108-118 and 960-1213.5 MHz) are widely used. NNSS (Navy Navigation Satellite System) operates in the range 399-988 MHz and is rumored to be phased out in 1996.

o MILITARY STUFF. Although primary designed for COMINT purposes and to DF enemy positions, these systems can also be used for determining your own position.
* WJ8958 is an US naval DF system which covers the 1 MHz-2 GHz bands.
* AN/SLQ-30, AN/SLQ-32 and AN/SLQ-72 are also US naval systems with HF DF capabilities.
* AN/TRQ-32 Teammate, a Comint/DF system which covers the HF/VHF/UHF frequency bands. Teammate is mounted on a US Army truck and has a telescoping antenna mast. When several units are used, one can act as the master and the others as slaves, which makes it a perfect DF system.
* AN/TSQ-112 TACELIS is the system that will replace the Teammate. TACELIS is an acronym for Tactical Automated Communications Emitter Location and Identification System. It is a Comint/DF system that covers the range 500 kHz-500 MHz. The system is also mobile and works about the same as the Teammate.
* AN/TSQ-114 Trailblazer, ground mobile Comint/DF system that operates in the 500 kHz-150 MHz frequency range an accomplishes DF between 20 and 80 MHz. A Trailblazer system consists of two master stations and three remote slave stations. Each of them is mounted on a M113 vehicle and has telescoping antenna masts.

(Continued from previous message)

* Guardtrail is an airborne Comint/DF system that has DF capabilities in the ranges 20-70 MHz and 100-150 MHz. The system needs several aircraft, operating in pairs, to obtain the DF info which is relayed to a processing station.
* AN/ALQ-151 Quick Fix II is also an airborne system with DF and early warning capabilities. It covers the 2-76 MHz bands and is mainly used in helicopters. It's twin brother, the AN/TLQ-17, is used for intercepting communications and has also a jamming device called Traffic Jam.

Hello and welcome to the first of hopefully many WORLD BANDSCAN columns. As Some background. I first proposed the idea for this column to Rick because I felt that both newer and more seasoned listeners would feel that this is a column that they could contribute to. I propose to take a small space of the radio spectrum each time and gather all information that can be gathered on what has, can and will be logged in this space. As the utility world is ever-changing, obviously some of these listings will be obsolete. However, no one can know exactly what is going on with allocations ALL of the time so the next best thing (in my mind, anyway) is to list EVERYTHING that has been reported. While this will bring SOME obsolete information forward, it will also enable those who DO know if a station is gone to report that fact.

I've compiled this information from many sources, including CFL, the Shortwave Frequency Directory, MT, Speedx, the Worldwide Ute News, but the

best information comes from YOUR LOGGINGS. What is actually being heard is the surest bet of what is on (obviously) so without your contributions this column will be no better than a list. With your contributions it becomes a LIVING, BREATHING ANIMAL!!! (OK, so it's still a list).

The first segment I'm going to deal with is 7500-7599 Khz. A fascinating hodge-podge of everything that's on in the Ute World. I would like to thank Alex Wellner, Piet Conradie, Bert van Rij and Rick Baker for their first submissions. As original members of the WORLD BANDSCAN team, they will receive a free issue of WORLD BANDSCAN when it comes out each month :-) Next month: 7600-7699 so get 'em ready now!

The WUN Logs Column
Rick "RD" Baker, editor: 1352 Cavalcade Dr., Austintown, Ohio 44515-3844 USA
e-mail: utelistener@msn.com or ae411@yfn.ysu.edu
Tim Dobbins, co-editor: shortwave@tbd.oau.org

A great turn out for WUN's birthday! I mentioned in the opening remarks that the entire first newsletter was 147k. Just the digital logs alone this month are 106k! Whew! I thought it would be interesting to see the 'original' charter contributors to this column. There was a grand total of 17 from 5 countries:

Charter Issue Contributors:
(AB) Ary Boender, The Netherlands
(CM) Craig MacKinnon, Halifax, Nova Scotia, Canada
(DM) Don Moore, Iowa, US
(DM2) David Moisan, N1KGH, Salem. Ma (US)
(ED) Ed Deasy, Charrlottville, Va (US)
(FW) Frazer Wright, UK
(JC) John Cope, Austin, Tx (US)
(JN) Jim Navary, Colonial Heights, Va (US)
(JP) Jim Pogue, Memphis, Tn (US)
(MS) Michiel Schaay, The Netherlands
(PP) Phil Potts, Fl, (US)
(RB) Rick "RD" Baker, Austintown, Ohio (US)
(MR) Marius Rensen, Hannover, Germany
(SS) Stan Scalsky, Leonardtown, Md (US
(TO) Tony Orr, Reston, Va, (US)
(TR) Tom Roach, San Jose, Ca (US)

This month we have 75 contributors from 14 countries, including our first logs from Japan and Brazil. Other countries this month include the Netherlands, United States, Ireland, Canada, Luxembourg, Germany, Spain, South Africa, Australia, England, New Zealand, and Sweden (in no order other than I spotted them!).
Alex Wellner has a 'find' for an unid in the December newsletter. He notes that the 12342 log of c/s SURN belongs to "6 OCTOBER" from Egypt. Alex also noted that in the November 1995 newsletter on 16534, there was an unid log of "Ramadan". In checking the ITU server, he found only two, 6BDE from Egypt and IY8632 from Italy. After reading his note and re-reading the log,

I think this should be M/S Ryndam, C6MM2, a cruiseship. These cruiseships

1953. kHz Scanners 32/79

Newsgroup: rec.radio.scanner
Date: 1996-01-23 00:00:00 UTC
From: Roger_Cravens@fforum.blkcat.com
Message-ID: <NOMSGID_1=3A109=2F239.0_960123_205600_2a0731df@fidonet.org>
Source record: 241812

Subject: kHz Scanners

(Continued from previous message)

often turn up on ship simplex frequencies to do ship-to-ship phone patches.
I recently logged M/S Ryndam and at first I thought he said..."Ramadam"!
Thanks Alex!
Also, I messed up and left off contributor "MR2", none other than
Michael Rivkin (7914@mne.net) up in Pamona, NY. His logs were included,
and he was listed as (MR2), but I left him off the list at the end. Sorry
about that Mike.
As a side note, I try to keep the contributors initials the same
always. I keep a master list and when a new contributor comes along, we have
a new ID. This has stayed fairly consistent from issue#1. So if I mess up
again (when I mess up again -hi!) you can always go back and check past
issues for an ID if need be.
Also I left poor Stan Scalsky's logs on a transfer disk. I have them
this month. I was very glad to see last month end!

HELP!
I've noticed that a good number of you who post over the WUN
listserver hand-type your logs. It would be a BIG (BiG!) timesaver if you
would use WUN format, including your initials at the end. This is the single
largest time consuming part of doing this column. Some month long lists take
perhaps 5 hours to convert. I started to run out of time this month and
almost had to leave some logs off. Please help save some work and just type
out your logs in WUN format. Thanks, that will give me time to type all the
logs that are going to be sent by our 30 some paper subscribers!
I am also looking for one and maybe two others to assist in editing this
column. With increased time helping with the listserver duties, editing the
entire newsletter, my other column, and other WUN duties, I spent way too
much time away from my family, my dog and my radios last month. If you have
some time to donate to the WUN cause, drop me a line.

==========
FROM: ary@bitbike.iaf.nl (Ary Boender)
I heard a couple of unid aircraft during the past year. Do you know to whom they belong? C-GMII (biz jet), D-AOHP, F-GZFG, OE-LRG, OO-CEC, PH-BRV, PH-DSE, PH-HET, PH-MRL, PH-OVR, PH-PSF, PH-RDT, PH-UKF31. Ary

That's it for this month!

==========
DIGITAL REVIEW
[editor: Ary Boender (ary@bitbike.iaf.nl) Fidonet 2:283/512.24]
[Lobeliastraat 33B, 3202 HR Spijkenisse, the Netherlands]

Hello, I hope that you had a wonderful Christmas and
| entered 1996 safely. WUN celebrates its first birthday
******* that's where the ASCII birthday cake is for :-)))
+-----+ I am glad that WUN became such a success. It is nice to know that so many Ute dxers from all over the world joined us. In case you didn't know it yet, WUN is THE place to be. The complete 'Who is Who' of the Ute-dx-community joined WUN, but where are their contributions ????? Right, enough small talk for now. Let's get digital. Oh, don't forget to send me all your info and stuff......

New monthly item ???
Following the item about the Dutch MFA and embassies, I received a few requests for a regular diplo item. OK with me ! This is what I have in mind: the items should be brief _hmmm... who said brief <grin>_ and to the point, including stations and frequencies, transmitting mode(s) and typical sample messages. Right WUNnies, I need your help with this ! Please, send me all the diplo stuff that you can find, especially freqs and sample messages. My address is in the header. Thanks for your cooperation.

Testing... one.... two....

Roberto Robba copied the Bulgarians while testing a whole bunch of (new ?) frequencies on 27 December. MFA Sofia tested with 'SOB', their embassy in Bucharest, and an unid embassy (LZU7). The tests started at 15.00 UTC and lasted for ca 1,5 hours. RY's and operator chatter were in normal 75bd RTTY while the 'real' messages were in 300bd IRA ARQ. Freqs: 4806, 5355, 5360, 5433, 5864, 6706.2, 6784, 6792, 7410 kHz. Here is part of the test trans-mission which started in 75bd Baudot.

sob sob sob ryryryryryryryryryryryryryryryryryryry
sob sob sob ryryryryryryryryryry zan zan pse zal 7410 7410

Then 300bd IRA ARQ messages, followed by 75bd Baudot operator chatter.

bk bk
xse ur th omis
ga zok 3/4
zrr 300

nv
sob sob sob ryryryryryryryryryryryryryryryryryryry
sob sob sob ryryryryryryryryryryryryryry pse om short 3

vy tsk om
pse zrr 300
tks
bvi

nv 5433 5433
nv 5433 5433
nv 5433 5433

The station then starts again with 300bd IRA ARQ. 5433 kHz is now parallel with 7410 kHz. At the end the station switches to Baudot and this text was sent: 'sob sob sob ryryryryryryryryryryryryryryyry pse zaal 6792 6792' after which it switches back to 6792 kHz.

THE challenge

In November I challenged you to check out 12395 kHz. Bert van Rij and Michiel Schaay did so and copied many vessels and Bert found also three other freqs. Ronny Peeters and I did some research. This is what we found. Any info from other members is most welcome.

1) USB freqs: 8340 and 12395 kHz (ship) / 8404 and 12575 kHz (shore). There are probably also 4 and 16 MHz freqs but we didn't hear them yet. It is clearly a company network. All companies are located in Athens but I am not sure if they are related.
2) Shipping companies involved: Dynacom Tankers Management, Athens (D), Agency Trust Ltd, Athens (A), Centrofin Management Inc, Athens (C), Sea Traders SA, Athens (S)
3) Apparently all companies (or is it one station that communicates on behalf of them ?) use selcal MPKV (4530) which was originally assigned to the USSR and has no official user now.
4) All vessels are registered in Greece, Cyprus or Malta, most of them are tankers. Here follows a list of the vessels heard 'till 15 January. Listed are the internal callsigns (INT1, INT2), the name of the vessel, the company, callsign, selcal number and selcal.

INT1 INT2 SHIP'S NAME COMP CALLSIGN SELCALNR SELCAL

*** TIPS & TIDBITS ***

Rick Albright reported recently the sale by American President Lines of six of its Pacific-fleet container-ships to Matson Navigation Co. The vessels involved, Presidents Washington, Lincoln and Monroe, are to be renamed Mahimahi, Manoa and Mohikana, while Presidents Hoover, Tyler and Grant will become Lihue, Ewa and Chief Gadao. Albright points out that in similar past transactions, the old radio callsigns were retained. Matson ships, which are frequently heard on USB HF, are known to QSL nearly 100%, he says, while other shipping co.'s have a much spottier record.

Kevin Wonders got back a QSL recently for a reception report sent to Tinker AFB, for which he provides this address:

(Station Name), 7481 Sentry Blvd., Suite 117, Tinker AFB OK, 73145-9012

Fellow wunner Steve McDonald has sent along a whole bunch of addresses this month, the by-product of a recent spate of successful QSLing:

JFM: Muroto Radio (JFM), 2318 Furushiro Murotsu Murotsu-city, Kochi-Prefecture, Japan

JFG: Shizuokaken Musen (Gyokyo), 1991-1 Tajiri, Yaizu-shi Shizuokaken-ken, 425, Japan

JFZ: Mushiro Fisheries Radio, 1-5-15 Yonemachi, Kushiro-city, Hokkaido 085, Japan

JFC: Misaki Gyogyo, 1-7 Harumi Miura, Japan 23802

WYZ3931: m/v Stewart J. Cort, c/o: Canal Station, Sault Ste. Marie, Michigan 49783 USA

A topic that has come up in recent months is the correct address to send reception reports for German Naval Station DHJ59. Several variations are currently available. But since successfully receiving a QSL from the station, Rick Albright now provides the one definitive address:

Marinefernmeldegruppe 21
Fernmeldezentrale
Postfach 27 31
D-26379
Wilhelmshaven
Federal Republic of Germany

Nicholas Lock of Australia recently received a QSL from Brisbane Air-Radio for which he provides this address:

Airservices Australia
Air Traffic Services - Northern District
Brisbane Airport
PO Box 389
Hamilton Central QLD 4007

Australia
Tel: +61 7 3866 3668
Fax: +61 7 3866 3568
Iain Wyeth
Team Leader
Brisbane International HF
Brisbane Briefing Office
Australian NOTAM Office

Ian Baxter wants to know if anyone can identify the following three-letter codes as callsigns or otherwise: TSG / EXW / VGO / OBI.

Don Moore was recently pretty impressed by a QSL he received from a Peruvian aero station (see Fixed Stations) -- his second such veri -- and provides the following address:

Pucallpa Aeradio, Jefatura de Aeropuerto de Pucallpa, CORPAC, Pucallpa, Peru

Ralf Radermacher received one from Environment Canada's Resolute N.W.T. station VFR the other day, somewhat late on account of bad addressing. So he has this address now taken from the letter:

Environment Canada
Arctic Weather Centre
Twin Atria Building
Room 200, 2nd Floor
4999 - 98 Avenue
Edmonton, Alberta
T6B 2X3
Internet: burkeg@mail.edm.ab.doe.ca <Gary Burke> (Program Supervisor)

# # #

'GOOD', 'FAIR' AND 'POOR' UTES THERE TO QSL
If you've never QSL'd a ute station, or if like me you have but only on a few occasions, maybe it's about time you considered trying again. The truth is that logging stations you hear on HF is only half of what ute listening is all about. There is nothing like receiving a written verification by mail to give you the feeling of actually being in contact with a distant station and in some way thus participating (even if obscurely) in its day-to-day operation.
With some of the information made available in this and past QSL Reports, you've got a fairly wide selection of utility stations, and their addresses, which are proven verifiers. The rate of return versus reception reports sent is surprisingly not all that bad. One seasoned QSL'er here on WUN, who keeps a database of his verifications, reports an average waiting time of about 50 days for QSL's -- in some cases it's less than a week.
If you're looking to QSL some real drop-dead-easy stations, take into account that some of them may not even be considered utilities in any sense

SOUD update
----
o It seems that I made two serious bloopers in WUN#12. Sorry for that.
The first one was in the SOUD update when I told you that the end
that sends MIG is definitely in Managua. Well, that is true but the
other end that sends WFO is NOT the Russian legation in NY. It is the
large Russian transmitter site just outside Havana - the same site from
which the other (one-way broadcast) SOUD transmissions come.
o Guy Denman from Portsmouth, UK, copied a new SOUD station on 7920 kHz
using link-id 00074. This sked starts at ca 14.45 UTC. Guy also enclosed
a recent sked for a bunch of the European transmissions.

Freq. UTC to link

GPS & DGPS

As you probably know, GPS is a satellite system and transmits on ca
1.3 GHz and that is way beyond the 0-30 MHz spectrum that we normally
handle here. There is however an important link to the radio navigation
systems in our frequency range. A rapidly increasing number of stations
transmits Differential GPS signals on LF and MF.

o What is GPS ?
GPS stands for Global Positioning System and is a space-based positioning,
velocity, and time system that has three major segments: space, control,
and user. The GPS Space Segment, when fully operational, will be composed
of 24 satellites in six orbital planes. The satellites operate in circular
20,200 km orbits at an inclination angle of 55 degrees and with a 12-hour
period. The spacing of satellites in orbit will be arranged so that a
minimum of five satellites will be in view to users worldwide, with a
position dilution of precision (PDOP) of six or less. Each satellite
transmits on two L band frequencies, L1 (1575.42 MHz) and L2 (1227.6 MHz).
L1 carries a precise (P) code and a coarse / acquisition (C/A) code. L2
carries the P code. A navigation data message is superimposed on these
codes. The same navigation data message is carried on both frequencies.

The Control Segment has five monitor stations, three of which have uplink
capabilities. The monitor stations use a GPS receiver to passively track
all satellites in view and thus accumulate ranging data from the satellite
signals. The information from the monitor stations is processed at the
Master Control Station (MCS) to determine satellite orbits and to update
the navigation message of each satellite. This updated information is
transmitted to the satellites via the ground antennas, which are also used
for transmitting and receiving satellite control information.

The user segment consists of antennas and receiver-processors that provide
positioning, velocity, and precise timing to the user.

o Signal Characteristics
The GPS concept is predicated upon accurate and continuous knowledge of
the spatial position of each satellite in the system with respect to time
and distance from a transmitting satellite to the user. Each satellite
transmits its unique ephemeris data. This data is periodically updated

by the Master Control Station based upon information obtained from five widely dispersed monitor stations.

Each satellite continuously transmits a composite spread spectrum signal at 1227.6 and 1575.42 MHz. The GPS receiver makes time-of-arrival measurements of the satellite signals to obtain the distance between the user and the satellites. These distance calculations, together with range rate information, are combined to yield system time and the user's three-dimensional position and velocity with respect to the satellite system. A time coordination factor then relates the satellite system to Earth coordinates.

o Differential GPS
Differential GPS (DGPS) is the regular Global Positioning System (GPS) with an additional correction (differential) signal added. This correction signal improves the accuracy of the GPS.
* Accuracy improvement: 10 meters or better for DGPS vs. 100 meters or better for GPS.
* Integrity improvement: provides an independent check of each GPS satellite's signal, and reports whether it's good or bad.
DGPS receivers collect navigational signals from all satellites in view, plus differential corrections from a DGPS station in the area. (Many DGPS receivers consist of two units: a GPS receiver, with a data "port" for DGPS corrections, directly connected to a radio receiver.) DGPS receivers display position, velocity, time, etc., as needed for their marine, terrestrial, or aeronautical applications.
The GPS determined position of a reference station is computed and compared to its surveyed geodetic position. The differential information can be broadcast to the users by radio. Info can be included in other positioning systems like Hyperfix, or on a sub-FM-channel by using RDS. Most of the DGPS stations however transmit 24 hours a day on LF or MF. In many cases marine radiobeacons that has been modified to accept MSK (Minimum Shift Keying) modulation are being used for DGPS transmissions, some broadcast only on request. Radiobeacons were chosen because of existing infrastructure, compatibility with the useful range of DGPS corrections, international radio conventions, international acceptance, commercial availability of equipment and highly successful field tests.
So far I heard two different sounding types of signals. One has a specific sound, like packet radio but with longer bursts. This system uses 250 bd QPKS (Quarternary Phase Shift Keying) although also 100 and 300 bd broadcasts have been noted. The other sounds like Sitor-B and is in fact MSK transmitted with a speed of 50, 100, 200 or 300 bd.

o MSK stations
So, where can you hear those babies ? As I said, many beacons are being used for DGPS nowadays so you have to listen between 285 and 325 kHz. The list is far too long to publish here and new stations are added regularly. The stations in this range are all MSK stations.
The coverage is becoming world wide. Stations have been reported from the America's, New Zealand, Australia, Europe and the Mediterranean area.

o QPSK stations

Route Indicators revisited

Blooper in ZEN procedure: I erroneously stated that the prefix ZEN means
that the station has the same routing indicator (RI) as the addressee.
This is dead wrong, my humble apologies folks :-)
A ZEN address followed by a RI means that the addressee will receive its
message in another way, NOT during the transmission that you copied. I'll

give you an example: say you copied a message from naval station DXWUN
to: RUWUN / WUN HQ
RUWEB / WUN WWW HQ
ZEN RUWDR / WUN DR
This means that the station who transmits this stuff will send a message
to RUWUN and RUWEB right now, normally by using some digital mode and that
RUWDR will receive its message in another way, by snail-mail, satellite,
pigeon or whatever.

I recently received a nice utility called 'IDENT' that roughly determines
the kind of military force that you are hearing. It will show you the type
of station (strategic or tactical), their origin, the area where they
operate, the force or organisation (Air Force, Army, Navy, Min. of Defense,
Min. of Foreign Affairs, etc) and finally the (sub) unit (HQ, brigade, unit).
In case you are interested, I can send it to you in the following formats:
UUencode, BinHex and Mime.

Thomas Ingenpass passed along another bunch of indicators. Thanks Thomas !

(Continued from previous message)

get around to posting something on it! I haven't actually seen this
mode/baud combination posted elsewhere over that period. This appears
to be essentially one circuit between Papeete,Tahiti and the nuclear
test center on Mururoa (atoll??). Nothing "secret" (or particularly
interesting) on this circuit though, just meteo from "meteociv Papeete",
and AFP news summaries. There is very rarely the typical 5-let group
traffic or non-protege messages. I have not _confirmed_ the return
duplex link from Mururoa. As you can see from the loggings, the circuit
is commonly found even at my East coast U.S. location. If conditions
are moderately good I can and do generally tune across one of the
circuits. Perhaps some "left coasters" can assist in finding the return
legs. It would be quite a catch from Europe.
I find it difficult to synch this signal on my M-7000, which only has
128 or 129bd to choose from. Works fine on the Code3. I left the mode
tag off the following list, all being CCIR 342.

Fax news from Marius Rensen's Home Page
---

o The NWS is bringing on line a new computer system to deliver radiofax charts to USCG Marshfield (NMF Boston). Initially satellite pictures will be unavailable via this system. (Notice to Mariners at 1430 UTC via USCG Boston).

o Offenbach Meteo will not discontinue facsimile broadcasts before March 1996 so you still have a chance to log and QSL them.

o US Navy will not discontinue facsimile broadcasts before 1997.

o CNA Taipei transmitting now at 0900 UTC (0800 and 1500 UTC cancelled).

o USCG Boston has a new frequency: 9110 kHz

o The US Coast Guard has a continuing requirement to distribute marine weather charts to its cutters by radiofax. A decision concerning broadcasting this information for public safety purposes has not yet been made, but is expected after the first of the year.

o The UNID station on 14626 kHz is confirmed by Robert Margolis as CZW, Maritime Air Group (MAG), Halifax, NS, Canada. Robert has logged CZW on 14627 kHz at 0200 1420 1430 and 2030 UTC on three different occasions, having last monitored it on Aug. 22, 1995 at 1415 UTC. There is no regular sked for these transmissions. Other listed frequencies are 4618

(Continued from previous message)

5680 Rankin Inlet Radio, Canada 2225 USB clg Baker Lake but no joy. (DHM)
6532 SATENA 130 1233 USB w/tfc w/Corozal. First time I've hrd an a/c on
this frequency. SATENA is not listed in Bob Evans' aero book, but per
"Colombia: A Travel Survival Kit" it is a small airline operated by
the Colombian Air Force to serve isolated communities not reached by
commercial air companies. Probably a very rare airline to log on HF!
San Andres ATC 1235 USB clg Providencia but no joy. Providencia ATC
1224 USB clg San Andres. These are in a Colombian island group in the
Caribbean. No joy, but "La Mina" answered & exchanged signal report.
Can't find "La Mina" on my very detailed Colombian map (bought in
Colombia!). At 1229 USB Turbo ATC (on the mainland) came on &
welcomed Providencia to the frequency & exchanged signal rpts, New
Year's greetings, & first names. I got the idea that the islands
might be a new addition to the frequency. Corozal ATC 1231 USB called
Barranquilla, then traffic. (DHM) Barranquilla R. 1120 USB Wkg UNID
st. w/Barranquilla actual wx in SP (TO). (TO)

Whoa, there no-coders!

The no-code folks seem to be becoming as virulent as the Extra "snobs" they condemn!

In defense of no-coders, I agree we need to go no-code across the boards if we don't want to watch ham radio wither on the vine and die.

Want evidence? We're all active CBers and on a CB group now, for cryin' out loud! What more do you need? If ham radio was the panacea, we'd be on packet or an HF net... or at least on an internet ham group! I feel bad for the exclusive CB folks whose "spectrum" we're using up!

Go CB!!!

Maybe hams could learn a little from the deregulated environment of the CB world to revitalize a dying ham radio hobby. Abolishing the CW requirement would be a good start.

Right now, you need code, though. With no-code you don't have legal access to HF bands. Several asked "Who needs HF, anyway?" Well, there is some satisfaction in backpacking miles from nowhere and using a few transistors and an IC you cobbled together with a little code key made from a coffee can and communicating halfway around the world on 15 meters with a length of copper wire tossed into the pine trees for an antenna. I can't explain it, I guess... it's just phenomonally groovy! Homebrew CW transceivers can be pretty tiny, depending on your construction skill. Perfect for the backpack or tackle box. Can't make an SSB or VHF or satellite system that's so portable and inherently cool. But you'll need to learn CW to use it.

Yup, if you want to have fun then play with low-power CW (or even a "big" commercial SSB rig if you're at home or in a camper). (Anyone got a good schematic for a tiny SSB exciter for 15 meters?)

If you're serious about direct communication and aren't interested in the fun aspect, then stick with repeaters and VHF/UHF (ick!).

If you want fun AND reliability, then turn your CB back on (good buddy)!

-- Dave

P.S. I was licensed back in the mid-70's ('76 maybe?) and have been ever since. Licensed in Japan too. Upgraded to General Class around '79-'80, but never progressed beyond General class (I only need 13

wpm? I've been doing 18 wpm with no problem!). I perceived the Advanced and Extra portions of the spectrum as too full of snobbery and the "good ol' boy" syndrome. I steadfastly refuse to sit for the Advanced (no problem) or Extra exams (well, I'd have to study for the Extra anyway...). I restate: Go CB!!!

Shortwave Dave

So if there is mis-use of a newsgroup such as this then we should just
ignore it and hope it goes away? I tried that, and it doesn't seen to
be working, how long does it take?

1980. POCSAG technical data sought

Newsgroup: rec.radio.scanner
Date: 1996-01-23 00:00:00 UTC
From: frisbie@flying-disk.com
Message-ID: <1996Jan23.095353.759@flying-disk.com>
Source record: 241879
Cross-posted to: rec.radio.scanner,sci.electronics

I am looking for technical information on the POCSAG signaling system used for pagers:

1) The modulation type

2) Data rates

3) Data formats

If there is a reference book or similar information, that would be ideal.

I have been told (by an unreliable source) that it is AFSK on an FM carrier, using 1200/2400 Hz. He claimed that a "0" is one (one half?) cycle of 1200 Hz and that a "1" is two (one?) cycles of 2400 Hz. Is this anywhere near accurate?

I am from Europe (Belgium), and there seems to be a possibility to crack the GSM signal. Some rumors are "in the air" that there are CD's available from the UK, containing the necessary software to listen to any channel in use you can intercept. Do not have a/THE proof, but I am always very prudent in these things. Also : Belgian Telecom c said to offer its cooperation in tracking down GSM conversations between suspected dealers. Newspapers reported that the accuracy in locating a conversation is approx. 300 m(eter). Well, some guy from the company itself said it is possible to track down someone up to 10 meter (= approx. 30 feet / you know : mathematics and triangles).

I have the same also. When I use my CB radio, because of the noise, no one else could hear me good. That is because when you plug it in, it uses the whole houses electrical system as an antennae and the outlet has about 60Hz noise. I got an expensive, (well a $25 adapter compared to a $3) and the problem dissapeared.

==========

I saw that piece, but I didn't really think it said much.
In reality, this is just a hill that overlooks part of Groom Lake. I
believe that it's been closed off to the public now, too (I'm not sure of
this).
The only benefit of this sopt is the visual aspect. As far as radio
intercepts are concerned, they can be done from many other spots.
The Inet connection is mainly for letting other interested people know
when something specific is happening (an excersize, for example).
What went unsaid in the TV piece is that a large part of the draw of the
place is that the Air Force wants to keep people away from there, for
security reasons (this was alluded to by the guy saying something like,
"If we can breach their security, it's not much").
Interesting, though.

Yes the SCOUT is worth it.
Try using an antenna tuned for the correct freq.
Next throw a filter on it.
And away you go.

You can see the freq your antenna is tuned for ,
just throw it on the scount and look at the numbers skip around
if they skip around in the 400 range then .... 400 Mhz

I put my cordless phone antenna on and it flipped around 40 - 50
till I turned on the phone . bam . 46.710.

Good Luck

1992. Help:radar detector w/remote sensor & how do I paint it?

Newsgroup: rec.radio.scanner
Date: 1996-01-24 00:00:00 UTC
From: SFS@gnn.com
Message-ID: <4e63me$76f@news-e2a.gnn.com>
Source record: 241591

I am contemplating purchasing a Bel 615STiR radar detector. This detector has a remote mounted sensor. What I have seen advertized is that the remote sensor is supposed to be mounted in the engine compartment, I assume just behind the grill.

Does anyone have any experience/opinions about remote mounted sensors? Does anyone know of any other brands with a remote sensor?

What I was thinking of doing is to mount the sensor on my pick-up trucks fiberglass cap. I have several questions regarding this setup:

1) Can I spray paint the sensor to match the color of my truck cap (off white) without effecting the sensors performance?

2) If yes to above, what type of paint will not reduce performance and will also adhear to the plastic in cold/hot rain/snow weather without cracking/peeling?

3) Will the added height and not having to look through the windshield glass improve the front and rear detection performance? I am not sure if the remote sensor of this unit has rear detection. From the ad it looks as though an optional rear "laser" sensor is available to mount on a rear window. Can it see RF in the rear but need extra eyes for rear laser detection?

4) My cap mounted cellular phone antenna would be located about 3 feet behind the remote sensor. Will the 800Mhz RF have any effect on the detector/remote sensor?

I am by no means familiar with RF so I was hoping to get some help in this newsgroup, sorry if it was a bit wordy.

Thanks in advance! Stan

No I am not a glutton for punishment, and I don't have as much free time on my hands as I wish. My reasoning is that for those of us who travel and take our scanners with us, sometimes just having the freqs of the TRS isn't enough. We need to know if we can listen to it, or if it will drive us crazy (Ericsson systems).

A list of all TRS users, the type of system, and whether or not it is in the clear will help out many scanner owners, including myself.

1998. FS: Shinwa 200 channel scanner with full 800Mhz

Newsgroup: rec.radio.scanner
Date: 1996-01-24 00:00:00 UTC
From: gregg@plains.nodak.edu
Message-ID: <gregg.1040.00DD3BDE@plains.nodak.edu>
Source record: 241597

I have a Shinwa SR001 200 channel scanner, covers 25-1000Mhz continuous, no gaps. Very colorful display. 2 antenna jacks, can be selected for each channel, along with a variety of scan delay times and modes and a full function remote control make this a very unusual scanner. I put in a new Lithium backup battery, have the manual, remote and scanner. It is in very good shape, few nicks or scratches, works fine.

$225 plus shipping.

email for more info.

1999. Re: CTCSS decoder?

Newsgroup: rec.radio.scanner
Date: 1996-01-24 00:00:00 UTC
From: saylboat@aol.com
Message-ID: <4e6ac6$bb8@newsbf02.news.aol.com>
Source record: 241598

CTCSS stands for Continuous Tone Coded Squelch System and is used on shared radio channels so that various groups of users do not have to listen to each other. When the appropriate sub audible tone is transmitted, and received the CTCSS circuit in the radio allows the audio to pass through the radio to the listener. This system is also know as PL (private line) and other manufacturer picked names which all mean the use of a privacy type squelch system. The DPL system operates much the same way but uses a digital sequence instead of a tone.

You would not need a CTCSS decoder to listen to any system using PL or DPL... unless you are trying to 'filter' out another user of the same radio frequency.

2000. BC-200XLT Tech Info?

Newsgroup: rec.radio.scanner
Date: 1996-01-24 00:00:00 UTC
From: RFBG67A@prodigy.com
Message-ID: <4e4de1$1mmu@usenetw1.news.prodigy.com>
Source record: 241599

BC 200 XLT
I just bought a "new" customer return Uniden Bearcat 200XLT from a Walmart store and got a special deal ($147) because the AC adapter was missing, and they had to give me a rubber antenna off of a new 55XLT. My first question is whether or not the antenna off of a 55XLT is an equivalent antenna to the one that normally comes with the 200XLT?
And my second question is: Can I use a Radio Shack AC adapter to charge my battery? (I read off of the back of the 200XLT that it has an input for charging/power for 12v DC, <and such & such polarity> but it doesn't say how many milliamps the input can handle.) Does any body know what the AC Adapter/Charger "Model AD-140u" is rated at? (I tried a 300 mA Adapter and it seemed to work OK).
My final question is whether or not there can be any modifications made to this unit to get some extra freqs, and what book has this sort of info?

Thanks for the info (in advance) !!!
Stan rfbg67a@prodigy.com
P.S. I returned a RS Pro 51 (more recent SN#) because a friend of mine said the 200XLT was a better scanner, I hope didn't make a mistake.

Hi Dan,

If the shuttle frequencies were the air to ground 1/2
in the UHF military spectrum (225 to 400 mhz) they are mainly u
sed during entry and re-entry only.
Once the shuttle is in orbit, they switch to the TDRS satellite (SHF).

The UHF freqs also are used as backup to TDRS, but I never heard
anything on them.

The only way that I know to monitor the comms is to either buy a
satellite dish and tune to the NASA contract channel, or listen to
a rebroadcast of this via HF on the Amateur Bands.

I'll be interested if anyone ever heard the UHF air to ground freqs
used when in orbit.

Several weeks ago some one posted a question here re: what frequency
is currently used by the New Jersey State Police to patrol Camden.

As a background, Gov. Whitman started this patrol for Camden about 2
weeks ago and last Friday evening a trooper was shot during a car
stop.

To answer the question, the 800 Mhz. trunked system is used for this.
Specifically, the Command Post subfleet of the Troop A system.

The dispatcher is ID'd as "CP" and the units mostly are
in the 1000 series (ie unmarked state units).

Any clarifications please emaiil me.

The chip used for wide fm in the PRO-2006 is manufactured as an AM/FM radio on a chip. The pro-2006 uses it only for wide fm . There are no commections to the am and sterio related pins of this ic in this radio. I would be surprised if there is much control of how this chip operates as it was designed to be self contained. I don't have a data sheet on it though so there may be a way.

Bruce.

Cellular l;istening can b e interesting and entertaining, at times, it can also be Boring. Was on a trip driving up the 101 and came across a cellular conversation. The male caller was talking with his female friend, possibly his wife or girlfriend, they were talking about the federal shutdown..etc...have heard arguements between husband/wife and boyfriend/girlfriend, realestate agents, contractors, and also some law enforcement chatter...

Some say it's illegal to listen to cellular phones but that law is not worth the paper it's printed on...people who use a cellular or cordless phone should use common sense and not give out any credit card numbers or any other information they don't want a third party to hear or have.

cellular phones lie in the 870-896mhz area...even if your scanner does not cover this directly, you will still be able to hear images of the cellular conversations elsewhere. All my radios cover the cellular directly!

Bruce M. Marshall (bmm1@freenet3.scri.fsu.edu) wrote:
: The following is the account of an experimental analysis of how the
: cellular phone system works. Note that these experiments can be
: reproduced based only on measurements of signal strengths without
: "interception of oral communications" which the ECPA forbids. Anyway I
: find a technical analysis of the system to be much more interesting
: than anything someone might have to say on a phone. Anyway...

: I downloaded something back around 1989 about cellular phone systems.
: It described the cannel spacing and the A and B band and talked about
: cells and had a twelve page chart showing all the frequencies in each
: cell and then went on with an analysis of the then recently enacted
: electronic communications privacy act etc.etc. It refered to cells as
: A band cells A through G and B band A through G, Around that time I
: took the printout and a highlighter and highlighted all the
: frequencies where I detected activity. Recently I looked for activity
: and found things have changed quite a bit in seven years. Frequencies
: that were active then are not used now. Of course many frequencies are
: active now that were dead then. Also I recal many week signals then.
: Now there are many strong signals and few week signals. I suspect what
: has happened is this: the first cellular tower in town was a bohemouth
: by todays standards. I suspect it used higher power and covered the
: frequencies for several cells. Now that there are many more towers the
: power and tower heights have been dropped. Therefore the signals on
: the voice channels are from closer and the signals from further away
: are not heard.

: I don't understand what the cells A through G are all about. As I
: understand it there are two bands each having 21 cells. Each cell has
: 16 (or sometimes 15) channels, the first of which is the control
: channel. The channel spacing in each cell is every .630 Mhz and
: spacing between cells is .030 Mhz. Using this information one can
: enter data in Microsoft Excel as follows

: CHANL 1 CHANL 2
: CELL A1 879.99 879.36

: CELL A2 879.96 879.93

: then use the mouse to drag this data out to 21 by 16 and you get a
: band plan for band A. The same thing can be done with band B. Now if
: you monitor the signal strength of the channel 1 control channel which
: transmits continuously you will find that the signal strengths of the
: audio frequencies are, for the most part the same. There are however
: exceptions. Some cells have a very strong control channel but no
: activity in the associated audio channels. Other strong control
: channels are here today and gone tomorrow. Also band B never shows any
: activity in the highest channel of any cell. Could these be reserved
: for some other use, pageing perhaps? Also there is activity outside of
: the original cell band of 870.00 to 890.00. How do these tie in to the
: band plan? I suspect the individual cellular phones have total slave
: relationship to the system doing exactly as they are told by the
: control channels.

: Any thoughts, clearifications or comments would be appreciated.

: Bruce

Benito Horta <benny@shadow.net> wrote:

>has anyone read the reviews monitoring time gave for the bearcat 9000?
>... Im looking between the radioshack pro 2042 and the bc
>9000 but I need to find out which scanner has a better RF section....

The PRO-2042 review will appear in the Feb 1995 issue of MT,
due out next week. The BC9000XLT was reviewed in March 1995 MT.

You can obtain reprints of the full reviews for $2 each from
Monitoring Times. I don't receive any part of the $2.

Both are top of the line scanners, and are worth owning.
I enjoy the BC9000XLT (I have two) because it has better
selectivity, smaller bank size, and more features (e.g., CTCSS,
alpha display, extremely fast scan/search).

Should you want a computer controlled scanner, consider the PRO-2042
with an Opto 535 board, but realize that's a lot of money
after you add software, too.

BC9000XLT (Uniden): 1995 vintage. High quality base using
up-conversion. 500 channels in twenty banks. Up to 250
channels can be programmed with alpha labels. Tuning knob.
Selectable AM, NFM, WFM modes. Optional CTCSS decoder. |
Very fast scan and search. Can lock out 50 channels during
search. Delay and attenuator independently programmable
for each channel. Effective Auto Store feature stores
unique frequencies. Good RF section, but not as robust as
PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One |
urban user, located within a couple of blocks of several
high power transmitters, reports severe desense problems.
See "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S,
in Monitoring Times, March 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base
with improved firmware and amber display. Made by GRE.
1,000 channels, but cumbersome 100 channel bank size.
Tuning knob. NFM selectivity is still a problem but
improved over PRO-2035. 10 linkable search banks. Smart
Auto Store feature stores the unique frequencies. Can lock
out up to 200 frequencies from search. Query facility
indicates if and in what channel a frequency is programmed.
Scan skips over empty channels automatically. Can sort

memories by frequency within a given bank. Broader IF |
selectivity than PRO-2006. Overall, a top grade scanner
and second only to Uniden/Bearcat BC9000XLT. See "The |
Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring |
Times, February 1996.

Bill,

I never purchased your products or read your publications. I have seen your scanner modification book and ads for your 2006 computer interface.

I was once an entrepreneur operating a consumer electronics repair business. I would always try to please my customers by un-doing a repair job and re-funding money if they wern't satisfied. They would still complain!

My point is, like words from a song that Rick Nelson wrote, "You can't please everyone so you have to please yourself".

I think your getting flamed because others are jealous, Your providing a service to the hobby and earning an income. I think others are mad because they think your using Internet as an advertising tool.

The same thing happened to me when I was involved in a DSP development project and posted weekly updates on rec.amateur.misc..

I guess the best solution is to ignore them and hopefully they'll go away. As long as you not violating internet etiquette I see noting wrong with your work.

I have the RS discone antenna on my roof 4 stories up, I have
it grounded at the antenna and just before my scanner.
Tonight something strange happened. The antenna was
disconnected from the scanner "thank god." There was a discharge from the
tip of the PL-259 plug to the outer screw part where the ground is
connected to the coax. It was like a static discharge but, its not static
because it shocked me it felt like 120V. It discharges about every 30
seconds. Its raining outside no lightning and the antenna, coax or ground
is not making contact to 120V anywhere.

Any answers Thanks.

Rich ringo@pipeline.com

Hey, we use them all the time. Because of the low loss and durability of the surface, almost all of our RF lines are gold plated from one end to the other. The lines are so popular, we have special teams that come in to remove them when we de-install the related equipment! You won't catch me transmitting on anything BUT gold plated signal paths. Nothing can handle the power like gold. Of course, I am talking about our waveguides. (SHF) :-)

2A4 and prior are certain to be hackable. 2A5 and up are certain to
be not. The hack involves moving D4 to the empty spots for D3. The
result is continuous 800 MHz coverage as well as 54-88 MHz restored.

There you have it.

Rgds.

The New Jersey State Police are currently using an analog Trunked
Radio System - Motorola Type I - I believe. They currently have
at least 2 fleets per Troop active with 16 subfleets each. They have
3 troops covering the entire state. Their system operational since
the late 80's.

Also, the Wilmington Delaware has a analog Motorola system in place
for their PD, Fire, EMS etc.

Hi,

I bought an Optoelectronics Scout to go with my AR8000 the other day and when I tried to find some frequencies, I noticed that the Scout was amazingly deft at finding ONE frequency.

It found a local radio station, but that was about it. It found 3 or 4 subfrequencies that were close enough to the radiostation to register a hit, but all the 800Mhz traffic, all the 130 air traffic, everything eslse, completely nothing.

So, the question is: Is the scout really worth it? I sent the unit back to Opto today to have it checked to make sure it's working correctly, but they said that I may need a filter that would block out all the FM radio signals and that this filter is another $99.00 or so.

Does anyone who has this combination or just a Scout in general have any advice? Is it worth the price tag, or should I just ask for my money back?

If you have a Scout and it works great for you, please please let me know!

To me it seems that it would almost work better if I could put it in capture mode without their supersecret filter mode turned on. Turning on the filter really really reduced any other signal's chance of getting through.

Scott

Source record: 241670

There are several legitimate companies who will clone a phone for you
IF you present SOLID PROOF that you have an active account on the
first cellphone. It appears that this is technically illegal.

There is some software floating around that will reprogram some phones
but the software and hardware interfaces seem to be different for each
model of phone.

Although the feds don't have time to chase after people illegally
listening to cell phone calls, they DO have time to chase after people
fradulently charging cellphone calls to third parties. This is a
subject that has in the past caught the feds attention and people
recently have been arrested and charged.

Price is now $450.00 US plus shipping.

The MVT 8000 is 200 channel ac/dc scanner with a mounting bracket for mobile use and comes with a cigarette lighter adapter although it can be hard wired.
It covers 8 Mhz to 1300 Mhz (continuous without blockage) and receives in WFM, NFM and AM. Frequency steps are 5,10,12.5,50 and 100 Khz.

It's got a 10 band search function, pass memory function, and other goodies found in high-end scanners.

I think you must take into account that most scanner owners are appliance
operators....push a few buttons and you can scan everything between A & B.
However, using a cell phone for this usually means having to first put the
phone in a maintenance mode, then specifically telling it to receive a
specific cell channel. This requires a string of information and manual labor
that most people (unless they were really hard up for this capability) just
won't put in the effort to do.

Cell phones usually won't scan, just allow you to monitor specific channels.
It might be intellectually stimulating to some, but I am sure it would get

tedious very quickly (more button-presses-per-channel than any known "scanner" would have!). You would have to have a lot of spare time on your hands to want to get into this as a "hobby"!

Steve

That depends what you want. Do you want to turn off the beep? Do you want to install a toggle switch that turns off the LCD backlight? Do you want to replace the BNC with an Nintendo Joystick Port?

Literally hundreds of mods are possible, but few are generally usable to most owners. I haven't seen any others than the 800 restoration in "published" form.

Here is the Basic program I wrote for my BC101 which is still ticking after 19 years. I wrote this program for an Apple II, originally, but this is the IBM Basic version. Just take the listing and feed it in to your version of Basica or whatever and enjoy.

The last switch is always shown as 0 or down. It is the channel delay and can be set however you like. If you want, you can tinker with the frequency limits in the program, but I have never been able to get the scanner to work at all above or below the documented ranges.

Cut Here

```
10 CLS
20 DIM A(13)
30 B(3) = 0
40 PRINT "ENTER FREQUENCY IN MHZ."
50 INPUT "";F$
60 IF F$ = "" THEN GOTO 80
70 F = VAL (F$)
80 IF F < 30 THEN GOTO 320
90 IF F > 50 AND F < 146 THEN GOTO 320
100 IF F > 175 AND F < 416 THEN GOTO 320
110 IF F > 512 THEN GOTO 320
120 IF F = > 30 AND F = < 50 THEN K = 10340:FMUL = 200:B(1) = 1:B(2) = 1

I have a AOR 1000xlt (a lot of birdies in those models) I would stay away
from AOR myself. they dont seem to have a great RF section. they seem to
spend more time designing thier FIRMWARE (which I think is the best) but
thier RF is real bad in my opinion. that wandering birdie problem is
related to a crystal used for a oscillator, it seems they went cheap and
did not use a high quality crystal, In fact on the fix it sheet it tells
you to order a crystal (radio shack) and put it in. and pull out the old one.

C'mon people, Uniden wants to know what you would want in a
scanner, and this is all you can think of?
How about if you could have a "dream scanner". List every feature
you can dream up. Come up with something no one has thought of
before, or something that no one has, but a feature that you
think a "perfect" scanner should have.
I am sure Uniden will take some of these, and incorperate them in
a future scanner, so now is your chance!

Mine had this problem in the 460 Mhz range but was completely fixed by getting the replacement crystal mod from my retailer (EEB) and doing it myself. Takes about 15 minutes to take apart, take out the old crystal and replace it with the new one.

New problem now - loose BNC.

The 8000 is a great radio in concept - too bad they took some shortcuts and released a less than ideal product (following computer software methods?)

>What on earth is the point of this diatribe?

To let you know that I thought you were getting smarter. I said that.
Can't you read? Is English not your native language or something?

> Do you want to look more
>like a fool than you already do? You answer nothing with this you
>just insult to be insulting, sure make you look good.

You don't understand. I don't give a shit how I "look". Looks don't
count when the chips are counted. I do not share your hollow,
nescient values. It is very simple, actually. Now extricate your
head before you break wind and blow your brains out.

>You keep doing it. People post reasonable posts and you start
>name calling and accusing.

No. Your brand of "constructive criticism" on how I look is not a
"reasonable post" in a scanner forum. You DID it. All I am doing is
trying to find a name for that idiotic behavior so we can discuss it
more to the point.

>Quite mature. Thanks for once again proving your critics right.

Hey, pal, you're welcome. Now take that "right" down to the bank and
get five bucks worth of change. Or see if you can ride the bus on
that "right". Are you stupid or do you just act the role?

> Have a nice time calling me
>names and such you just look dumber and dumber not just to me
>but to all who read your blasts.

WHO empowered you to speak for them? Could I see the Power of
Attorney, please?

> I believe (this is my opinion

Opinions are a lot like assholes, you know. Everyone has one, and
they all stink. You trying to say yours smells like a rose?

>not putting words in other peoples mouths) that every time you do
>this you demean yourself and erode respect for you.

Okay, that's cool. Now did it ever occur to you that I might not WANT your respect? I tried to get on a bus today and stuffed your respect down the nickel snatcher in place of the buck and a quarter, and the driver dang near called the cops on me. I had to slip the bastard a fin to shut 'im up. That ride cost me a damn $6.25, thanks to your "respect". Thanks, but no thanks. I'll pass this time......

>If you want to lower your image on the net

WHO did you say you were speaking for again?

> I never called called you a name or accused you of anything

Okay, okay, okay.....spose I slip up behind you and goose you real good? Would you LIKE that just because it doesn't involve name-calling and accusations? Well, you went and stuck that very looooonnnng brown-stained nose of yours where it wasn't invited. So what's the difference? Geez, doode.......... And since when does "constructive criticism" NOT amount to name-calling? Gaaawwwd, man, you're one dumb doode..........

> Prove me wrong, just shut up for a change, bet you can't.

THAT would be rude and disrespectful of me to ignore you when you're talking to me.......and poking me with that bologna nose of yours. If I ignored you, you'd get huffy, pissed, and torqued out of shape over that. Now you came poking around, all wise(assed) and sanctimonious-like, just like a real pillar of the church, with your "constructive criticism", so I am beholden by social entiquette and mores to acknolwdge your nincompoop efforts to project your mirror vision at me. But here, let me offer a possible solution......

Stick one finger up your sweet patooty, and another one in your chops.....and then WAIT for someone to holler, "Switch!". That'll work.

Bill

Brilliant! Duh? Sure enough! And it's a heck of a lot easier to find
than the date code, too. Great observation there!

Whooooooooey, we're stepping to the same drummer, then! Them kinds of
folks would bitch if they were hung with a new rope, or if they were
on fire and you walked across the street and peed on 'em..

>My point is, like words from a song that Rick Nelson wrote, "You can't please
>everyone so you have to please yourself".

Oh oh.....you're dating yourself! :-)

>I think your getting flamed because others are jealous, Your providing
>a service to the hobby and earning an income. I think others are mad
>because they think your using Internet as an advertising tool.

They don't THINK that. It's obvious that I don't. Just that each
wants to pitch rocks and so they'll grab the first thing handy, and it
pisses 'em off when they grab a fresh, steaming pile of dogshit.

>The same thing happened to me when I was involved in a DSP development
>project and posted weekly updates on rec.amateur.misc..

Hells bells, you can't win fer losing with some people. Gawd, if you
work for a living, you ain't supposed to be HERE since THEY all draw
unemloyment and food stamps for a living. I never was able to see how
they convert them foodstamps to radios, but they sure do.

>I guess the best solution is to ignore them and hopefully they'll
>go away. As long as you not violating internet etiquette I see noting
>wrong with your work.

Better not, since it's painfully clear "that I'm hurting my image".
So if I were here for business, that doesn't make a helluva lot of
sense. I guess they've run off most everyone else and thought
I'd be a pushover or something. Obviously, you know the scene, too,
so I ain't telling you anything.

But, really, it's just a small core of peckerwoods and wannabe
messiahs. The mainstream bunch are cool as ever and just don't get
involved where they're not needed. Same with you and me. If two
others were spitting and peeing at each other, we'd sure not want to

get in the middle of it. That's plumb dumb, if you ask me..... :-))

> (Fellow Radio Hacker)

Hmmm, while I don't consider our agencies radio frequencies to be particularly "cool", you are certainly welcome monitor our Department's radio traffic <grin>.

You can obtain a list of all 24 LAFD 800 MHz frequencies by visiting our Internet Web site at URL:

http://www/ci.la.ca.us/dept/LAFD/index.html

Choose "About the LAFD" and visit our "Dispatch Center" to access the frequency list.

Happy Monitoring!

Depends on what they bought it for. Some buy for what you indicated, but there are those that buy it for the clarity, and the extended range.

The same is true for those cordless phones that double as a cell phone when you travel to far away from the base.

I am looking into either the Yupiteru MVY-7100, or the AOR AR-8000. Both look like great scanners. The Yupi seems only to lack computer control, and alphanumeric tagging. Computer control is not that important to me, so which one is better? I have heard that the Yupi is built better.. Some believe that the RF performance is significantly better on the Yupi.

Anyone with experience with one or both of these radios please post/mail.

Thanks in advance, 73,

Nate, KB9LSX

>CODE 7 ??????????????????????????????

I have a photocopy of a page of the APCO "Ten Code" list from the book
Communications Monitoring (see below). Most of the Ten Codes used around
here track closely with the list, as they probably do in most localities.
These codes cover most all situations and provide the necessary "shorthand"
to provide quick information to the officers/etc. and dispatchers.

Where things get really grey and don't translate is in the use of "code,"
"signal," and other shorthand items. The Town of Blacksburg police has a
list of about 30 "codes," of which they use about six or eight. The most
common is "code 4," as in a dispatcher asking "Unit 486, code 4?" and
unit 486 replying "code 4" to indicate that all is well, the situation is
under control, or "I'm awake and listening." They also use "code 8" to
indicate that they are going to the town shops to get gas in the car. An
officer headed to "code 19" is taking someone to the magistrate/jail in
nearby Christiansburg. They also have several "codes" to refer to common
crimes and incidents, such as vandalism, theft, suicide, etc. The other
local police departments don't use "codes" much, if at all. The Virginia
State Police use "signal" in some transmissions, mostly "signal 26" to have
the dispatcher set up a car-to-car link through the dispatch channel so
a trooper can talk to another trooper elsewhere in the division and out of
range of the normal car-to-car channel.

To try to collect all the codes and signals would be a daunting task and
would require quite a database. It might be nice to have for folks who
travel to other localities and like to know what a "code 7" is when a call
is nearby their location. Anyone who cares to take on such a task and pulls
it off will earn my admiration.

Now for the 10 codes; they came from _Communications Monitoring_:

I am not a antenna god either, but your TV ant should work better
than you would think because TV freq's are scattered all around
the freq's that most scanners pick up.

It does not hurt that it is usually 30 - 40 ft of the ground!

I have had ok results in hotels just by hanging a long wire out the
window! (That has been hard to explain to the airport security,
why I have 50 ft of wire with me!!)

Source record: 241528
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I enjoy hearing music and sounds from my computer but unfortunatly, everytime I plug a line into sound card for my ext. speakers, it interferes with my scanner. I had missed some fire calls and when I turned CTSSC of on my BC890XLT, all I heard was static. And using the squelch knob didn't work. So with CTSSC on, the PL tone is masked and I hear nothing.... With it off, I get an annoying hiss. I can turn the scanner up in my truck, open the window and hope I hear the radio traffic over the music... Plus it's kinda cold right now.

Anyone have a solution?

2104. AR8000 wandering birdies - help!

Newsgroup: rec.radio.scanner
Date: 1996-01-25 00:00:00 UTC
From: shawn <shawn@intellex.com>
Message-ID: <4e6vap$jl5@news.cis.nctu.edu.tw>
Source record: 241529

I posted an earlier SOS regarding the AR8000 that I just purchased. The problem I am having is with the "wandering birdies." My radio seems to have a large number of these. I am trying to determine if this is a problem with this particular radio, or if it is a general design problem. I have read previous posts regarding this problem, but I have not be able to tell if my problems are bigger than normal.

This particular radio is unpredictable. I might turn it on and find this problem immediately, or sometimes it may take 10-30 minutes before it manifests itself. It has on occasion, scanned for several hours without a single problem. Then it may have a flurry of these birdies. I have almost 80 frequencies programmed in. Of these frequencies, I have had the birdies on at least 12. Does this seem higher than normal for this radio?

Here are the frequencies that I have found the birdies: 465.375 460.525 460.575 156.090 155.460 153.485 460.350 155.670 42.600 42.700 154.815.

I have one more question. I have read about the crystal replacement mod. If anyone has done this mod, I would like to hear if it helped. I have a few days to decide whether I want to keep the radio or return it. Any advice will be appreciated.

--

Sincerely

Shawn Raper

I have a BC-890XLT

The main things I'd like to see are the following:

A better WX Alert. Presently to use this option you can't be scanning or monitoring another frequency. Being in a Vol. FD, I must always monitor my depts. freq. so that makes WX Alert useless to me at present.

Computer Interface!

A way to make all of Bank A the priority channels with the priority rating being the channel number.

If I have the scanner set to channel 1 on only and the power goes, when the power comes back on the scanner needs to be set to channel 1 only instead of going into scan mode.

100Khtz to 1GHhtz with no gaps except for cellular.

SSB, USB, CW

Why are we limited to x number channels per bank? Let's say we have 20 banks of 25 channels. I want dedicated banks to lets say CB. Thats 40 channels. Which means, 10 wasted channels. How about user definable banks. So if I want to set up Bank A with 10 for my fire freqs., Bank B with 40 for CB, Bank C with 5 for medical, Bank D for county SO, Bank E with 20 for AM, Bank F with 10 for aviation, and so on, I can and not waste so many channels.

Questions:

Who is the idiot that used an RCA plug for the aux. control jack? All the control jacks I've seen on cassette recorders used something like 5mm phono.

Who is the idiot that put EXT SPKR and LINE jacks on the front of the unit? I have my scanner sitting on a shelf and I have to look at a dang wire coming from the front of my scanner. How tacky. The only jack that should be on the front should be a headphone jack.

Thats it for now. I'll be posting the specs for a decent scanner later. With todays technology, there's no reason we can't have a better scanner at a better cost.

Keep The Code.

Cw is like the spare tire in the trunk of your car. You may never use it, but when you do need it, it sure comes in handy. I have made a lot of DX contacts on CW that I would not have been able to make on phone. Not because of weak signals, but because the station I contacted did not speak English and I did not speak their language. We both knew CW though, and every CW prosign and Q signal was clearly understood by each of us.

The main reason to keep the code is for a situation that I hope never happens, but it could happen. And that reason is a complete National disaster. We have never had a disaster that has affected the entire country at once. WE have had hurricanes here, earthquakes there, and some flooding all around, but never a nation wide emergency. A Nuclear war is one emergency that would affect the whole country. And in a Nuclear war, sensitive electronic circuits as found in our radio's and computers would be Zapped, making that equipment useless. Now the key to restoring order after a disaster is communications. And as a Ham, you have agreed to help out. (see part 97) Now you have to find a radio that survived the disaster, perhaps you will have to build one. The simpliest transmitter to build is one that sends a CW signal, only need a few parts to do it. You can use a wire for an antenna. It really wouldn't do any good to build a Cw transmitter though, if you didn't know the code.
Now, it is possible that we will never have a nuclear war, things look great in Russia right now {hi}. And if we do have a nuclear war it is possible a few radios will survive and you won't need to build one {hi}. And we all know that with so many hams off the air, the packet & RTTY networks are going to be less crowded and working just fine {hi}.

I guess you're right, we don't need code {hi}.

I posted an earlier SOS regarding the AR8000 that I just purchased. The problem I am having is with the "wandering birdies." My radio seems to have a large number of these. I am trying to determine if this is a problem with this particular radio, or if it is a general design problem. I have read previous posts regarding this problem, but I have not be able to tell if my problems are bigger than normal.

This particular radio is unpredictable. I might turn it on and find this problem immediately, or sometimes it may take 10-30 minutes before it manifests itself. It has on occasion, scanned for several hours without a single problem. Then it may have a flurry of these birdies. I have almost 80 frequencies programmed in. Of these frequencies, I have had the birdies on at least 12. Does this seem higher than normal for this radio?

Here are the frequencies that I have found the birdies: 465.375 460.525 460.575 156.090 155.460 153.485 460.350 155.670 42.600 42.700 154.815.

I have one more question. I have read about the crystal replacement mod. If anyone has done this mod, I would like to hear if it helped. I have a few days to decide whether I want to keep the radio or return it. Any advice will be appreciated.

I am interested in purchasing a tape recorder advertised in MT that tout's 10hr recording time. It is sold by VIKING INTERNATIONAL out of San Francisco. I would like to hear from users of this recorder about its performance. I am interested in the following.

- Does it have excessive warble (speed not constant)
- Is it's tape speed constant throughout the tape or is it faster or slower at the begining, middle & end of tape.
- What is the sound quality like.
- What length tape do you recommend using for best performance.

This is going to be a gift for my wife to use to record traffic on the scanner and various radio talk shows she likes.

Thanks for any input you could supply.

John

SAM>To me it seems that it would almost work better if I could put it in
SAM>capture mode without their supersecret filter mode turned on. Turning on
SAM>the filter really really reduced any other signal's chance of getting
SAM>through.

I made a post about the Scout saying it was a wee bit silly toy and the
guy from Opto lambasted me. I own a Scout. I bought it used. It works, but
only if you are very very close. You can put a Miracle Baby (or Maldol clone)
on the Scout, put the Scout in vibrate mode, and get a freq by walking nearby
the source (we are talking about 10ft i.e. not to discrete.) You can put the
Scout on a mobile Ham antenna and drive around. This does work if the
guy is within 30 feet. It will pick up pagers real well too.

The Scout works under the right circumstances. It will get you what you
want if you are willing to put some effort into it.

If you still have your Scout, try this trick. Connect it to a good mobile
antenna, preferably a dual band (2m/70cm) Ham antenna. Park it LEGALLY near

a police station of your choosing. You will get quite a few hits as most PD log on when they get in their car. Other crime units (like undercover) will try out their radios before leaving the department. You can pick up a hidden freq or two this way, but generally these secret freqs are known by other local scanner.

You can repeat the above experiment at shopping malls, universities, government buildings, etc. [Just don't sit in the car. You will look very suspicious. Leave, let the scout work, and come back for the data.]

I am told filtering increase the range of the Scout. I plan on building some and will post my results.

BOW, I don't seem to get it to work very well at cellular freqs (on my Canadian trips).

I just got one and it seems to work well, though I did have a similar circumstance. I travelled to a hotel where I was attending a class, and the SCOUT starting registering hit-after-hit in rapid succession. Turns-out there is a paging tower on top of the hotel that was putting out a big enough signal to screw-up everything else nearby as long as you were in the near-field of the thing.

That may be your problem with the FM station... it must be pretty close by. As far as I know, all you can do it use a filter. Someone else on this group mentioned using one from Radio Shack ($4.99 I think, plus a bunch of connector adapters to make it hook up to your BNC jacks... it is designed for 75-ohm "F" connectors). Haven't tried it myself, so let us know if it works!

Don't pay no mind to the Wal-mart shopper - a PRO-43 has nothing to do
with color or black-n-white \ it is a radio scanner and $225 is not a
bad price, allthough, i'll offer $150.00 since it has no belt-clip.

Sure! You know....mink-lined toilet seats; gold plumbing fixtures?

> can see why one would use gold plated connectors for the outside
> portion of the connection(anti-corrosive) but why use these over priced
> connectors inside when the BNC recepticle is made of regular plated or
> stainless steel.

Well, they're not THAT much over priced for one. Two, Type F
connectors are really funky, crappy connectors anyway. And
three, VHF and UHF frequencies can go wild over connection paths
that DC and low RF thinks is a direct short. In other words,
at VHF/UHF frequencies, mechanical connections of stainless
or nickel plated steels are not necessarily sound connections.
Gold is a super-conductor for one, and two, it is "soft" allowing
the bite of the threads to "dig" for a better connection.

It is one of those tiny little things that may never make a
difference, but why risk it when you do it once, and forget it
with the peace of mind of a good connection? Connectors have
always been the headache of RF people....and each one has a
certain insertion loss. Gold will minimize that loss.

> We don't use these much in the broadcasting industry and I certainly
> am not an expert on gold vs regular connectors...but I have used gold
> plated connectors on a few a projects and I'm not convinced that it made
> any difference.

In the broadcast industry, you use SILVER platings all the time
without knowing it. All your Amphenol and Bunker-Ramo connectors
have Teflon dielectrics and silver plated shells. Silver may well

be better than gold.....but gold is easier and cheaper to electroplate
hence that's why Radio Shack carries them. The TV and Cable
industries could care less. But since Type F connectors are so
nasty, I recommend gold to solve weird problems for the hobbyist
before they ever begin, see?

> Convince me and I will convert....to gold that is(g).

Makes me no never-mind. I don't own stock in the connector
or gold industries. Just that at VHF and UHF, all the regular
rules don't work as we expect sometimes, and there are some new
rules that come into play that have not been "discovered" yet.
Good RF connections are vital to top performance. And there you
have it in a nutshell.

Kind regards,

Bill

I have had numerous satisfying dealings with Pioneer Electronics in Oregon.
They are a discount Radio Shack dealer, and they specialize in RS scanners.
They advertise every month in US Scanner News.

I have even been able to get out-of-production units through them.... like 2
Pro-2006 and two Pro-43 scanners 1.5 years after they were discontinued!

In <4dvgg8$avp@news.cdsnet.net> jococour@cdsnet.net (Mr. Ed) writes:

>The problem with this is that it will force valuable police resources
>into tracking down whether you have commited real crimes or are just
>pretending to.

Are you saying that the authorities routinely monitor cellular conversations?
I thought this was illegal. I thought they had to have a court order or
whatever to monitor telephone coversations. Are cellular calls treated
differently?

>There have been numerous crimes stopped and numerous crimes uncovered by
>citizens listening to scanners. In one celebrated case, a next-door
>neigbor heard her next-door neighbor plotting to kill her husband.
>Thankfully, as a result of the neighbor going to the police, the hit man
>and the wife were arrested.

Did the "citizen" that illegally monitored a private conversation get
prosecuted as well? Bloody well should have been....

Monitoring cellular calls for fun is one thing, but ratting on the callers
to the authorities is pretty low IMO.

>So, bearing that in mind, any cop worth his
>salt will investigate any citizen's reports of "dead bodies" in trunks,
>and "50 kilos" of cocaine stashed in some club. By forcing public
>agencies to investigate your "non-exsistent" crimes, you're pulling them
>away from doin' their jobs tracking down and preventing real crimes.

I'm not a lawyer so I may be on the wrong track here, but can a conviction
be secured using illegally obtained evidence? If the only evidence linking
the 50kg of coke to the person is the tape of the cellular call, can a
prosecution be brought?

2130. PRO60 Scan Rate Increase?

Newsgroup: rec.radio.scanner
Date: 1996-01-25 00:00:00 UTC
From: joolson@ccgate.dp.beckman.com
Message-ID: <4e88f8$t6n@inet.dp.beckman.com>
Source record: 241624

I'm presently trying out a PRO-60 and PRO-51. The 51 is a good little radio with an acceptable scan rate and sensitivity. The 60, with its slower scan rate, misses quite a bit of the first part of a transmission. Thus my question. Is it possible to increase its scan rate by upping the clock rate or something along these lines?

To me, this is a major drawback of the 60 which could otherwise be a great little scanner. I'm a technician and have no problem getting around inside of equipment. I don't have a schematic, but could probably get one.

Also, is there a way to tell if the power saver circuit is working properly. If it is shutting down prematurely, this could be adding to the unacceptable scan rate.

Thanks

Jim Olson

2131. PSB v1.0

Body handling: Inline uuencoded payload not displayed: psb1_0.ps

Hello Everyone!

It's come to my attention that people have been asking about the PSB (pocket scanner book). For those of you who don't know about it, it is a postscript minature book that contains many useful scanner freqs...

Anyways I first made this about 2 years ago, and since then have graduated from Purdue and now work at Motorola as an RF engineer designing pagers, to say the least this last year has been BUSY!

However, I still love scanning, and the recent interest has caused me to pull the old PSBv1.0 out of storage.

Please send and corrections / additions to me!! For version 2.0! Please put PSB in the subject line so I can sort the mail out.

So without further ado heres the uuencoded psb v1.0 again...

DIRECTIONS
Cut the appended text, uudecode, then
Print out this file on any Postscript capable printer, cut into sections and staple like a book...

Disclaimer
I do not give any warranty of the information given in the PSB, Use at you own discretion.

CUT HERE:

[Inline uuencoded payload not displayed: psb1_0.ps]

2134. AR8000 wandering birdies - Help!

Newsgroup: rec.radio.scanner
Date: 1996-01-25 00:00:00 UTC
From: shawn <shawn@intellex.com>
Message-ID: <4e6vds$jm6@news.cis.nctu.edu.tw>
Source record: 241628

I posted an earlier SOS regarding the AR8000 that I just purchased. The problem I am having is with the "wandering birdies." My radio seems to have a large number of these. I am trying to determine if this is a problem with this particular radio, or if it is a general design problem. I have read previous posts regarding this problem, but I have not be able to tell if my problems are bigger than normal.

This particular radio is unpredictable. I might turn it on and find this problem immediately, or sometimes it may take 10-30 minutes before it manifests itself. It has on occasion, scanned for several hours without a single problem. Then it may have a flurry of these birdies. I have almost 80 frequencies programmed in. Of these frequencies, I have had the birdies on at least 12. Does this seem higher than normal for this radio?

Here are the frequencies that I have found the birdies: 465.375 460.525 460.575 156.090 155.460 153.485 460.350 155.670 42.600 42.700 154.815.

I have one more question. I have read about the crystal replacement mod. If anyone has done this mod, I would like to hear if it helped. I have a few days to decide whether I want to keep the radio or return it. Any advice will be appreciated.

--

Sincerely

Shawn Raper

>
>Thanks,
>Virgil Finley
==========
Hi, Virgil...
This is normal.
When you think about it, it's got to happen...
In order to check the PRI channel, the scanner must move off the normal
channel it's on, and tune tot he PRI channel. When it does this, the
radio can't continue to hear the other channel anymore.
The only solution for this would be to have 2 front ends, with the second
one to check (or monitor) the PRI channel, and switch to the PRI channel
in casr the squelch breakes on it. Few would want to pay for the extra
hardware, so it isn't done.
Hope this helps.

>
>thanks in advance, Mike
==========

Since you are dealing with a handheld unit, there aren't a whole lot of
things that can be done to the radio itself. The constraints placed by
the space available, and battery life really restrict what can be done
with the on-board audio.
There are things that can be done to improve the audio, however.
Personally, I use a few of them, in different situations.
Radio Shack sells an external speaker, with a coiled cord and a clip on
the back. This works well in,as it places the speaker right at your ear.
I also use the "bud" type earphones a lot. I only use one, with the other
one coiled and taped tot he cable; this way I can keep one ear open for
whatever. The fidelity is excellent with thism BTW.
If a little more room is available, there is a new source of amplified
small speakers that looks promising: computer multimedia speakers. These
can be modified to use just one speaker, and many are battery powered for
portability.
If you are using your PRO-60 in a stationary use, then the audio can be
fed to any stereo system, or other amplified speaker system.

Hope this helps a little.

In article <4e2j9r$m65@netport.com> bherder@netport.com (Bruce Herder) writes:

>Who needs CW when we've got satellites?
> Bruce

Apparently Bruce is not particularly familiar with satellite operation.

The noise floor of the AO-10 and AO-13 satellites is such that with SSB
and reasonable power levels, typical signal/noise of 10-13 dB is about all
one can expect in good conditions, using a fairly large antenna system
such as a pair of 20 foot long circularly polarized yagi antennas feeding
a low noise amplifier at the antennas.

With this performance, it is far easier to use CW than spend lots more
money on a system capable of marginal voice capabilities. With CW, a
10 dB s/n signal is quite readable, and a narrow filter can improve the
s/n of the received signal substantially, as the common 400 Hz filter
will push it up by over 7 dB.

The rapid doppler shift of the low altitude satellites makes CW a much
easier mode to track than SSB. Doppler can move the signals by up to 6
kHz during a 15 - 16 minute pass. In this case, many operators consider
it easier to listen to a varying tone of Morse than it is to re-tune constantly
and often lose first part of the transmission from the other end due to
mis-tuning.

Hi guys, I've been trying to scan more and more video images from news scenes (mostly fires) into the top of my web page. I think you will find some the the pictures interesting. I've also sone some quick audio recording and converted it to Real Audio format from one of the scenes. Try it out and please let me know what you think. I've not taken much time to edit the audio clip but it should give you an idea of what I'd like to do.

I have noticed at my end that the real audio first loads into my computer then begins to play after receiving the hole file first. Do you experience the same and if so any advice?

I'm using a 28.8 modem and the page loads ok for me but I'm not sure how others see it. Some input would help.

Anyways I just wanted to let you know of some of the stuff I've been working on and add my two cents worth because I cant seem to think of anything to post here latley.

I'm gone in a week for a week! I'm going somewhere where it is warm and sunny and I'm leaving my scanners behind.

2159. Re: TV Secondary Audio Programming (SAP)

Newsgroup: rec.radio.scanner
Date: 1996-01-26 00:00:00 UTC
From: martin@dc.cis.okstate.edu
Message-ID: <4earu3$3jg@news.cis.okstate.edu>
Source record: 241453

There is nothing particularly new or different about SAP. It is known as SCA in the FM broadcast world and that stands for Subsidiary Carrier Authorization. In FM broadcasting, SCA is used for background music broadcasting to area businesses who pay a service such as Muzak for the privilege of boring their clientele with this stuff while they shop.

SCA also has been used to provide a method for reading newspapers to the blind and also to send digital information to customers such as those who subscribe to stock market quotes, etc.

SAP capability was part of the stereophonic television standard which was adopted in the United States in the early 1980's. The standard calls for a couple of audio channels, one for studio use such as for quin queuing and the other for SAP.

The SAP channel is just a low-frequency carrier which is transmitted along with the audio. If you had the ears of a bat, you might hear it as a varying high-pitched whistle at the very top end of the sound, but the deemphasis network in your TV and the fact that the SAP carrier frequency is about 175khz mean that you will hear absolutely nothing different on a normal television audio channel.

You won't hear the SAP channel with a scanner even if it is tuned to the sound carrier of the channel in question because the SAP channel appears as a carrier a little above and a little below the main carrier. When the main carrier fluctuates with base-band audio, the SAP channel moves right along with it. You can sometimes faintly hear the SAP audio this way when the main carrier is still such as during silent periods, but you loose the SAP as soon as the main carrier starts talking or playing music again.

In order to correctly receive SAP or SCA, you must have some sort of narrow-band FM detector such as a PLL or other discriminator network which is tuned to the actual frequency of the subcarrier you want to receive. This detector is actually connected to the raw, (undeemphasized), audio from the main channel's discriminator just like the stereo decoder is already. Many times, in fact, when somebody wants to modify an FM tuner for SCA reception, they find the place in the circuit where the stereo detector is connected and tie their SCA decoder in there also.

Subcarrier detectors are sort of like a receiver within a receiver in that you must first decode the main channel audio in order to properly receive the subcarriers.

The SAP channel on television is considered open, as far as I know, but the SCA transmissions on the FM broadcast band are protected by ink and paper and are considered as closed-circuit systems so be careful what you do

with whatever you receive via FM broadcast SCA signals. I hope this answers a few questions.

Hi,

You can also check the Philips Semiconductor WWW page. They make
a POCSAG decoder IC that has some good info on POCSAG in the data
sheet.

They also make cellular IC's, some good info there too.

The chips to look for is:
PCF5001 POCSAG Decoder

Try:

http://www.semiconductors.philips.com/ps/philipsc.html

The data sheets are in .pdf format and they also have FAXBACK
capability.

I and another club member have Yupis... another couple of club members
have AOR-8000s. We keep talking about having a scanner "competition",
but we've never done it.
I really like the Yupi (I also have a PRO-43, 2004 & 2006 and have
owned Bearcats and Regencys in the past). It's performance is on a
par with the RS PRO line... in general use here in a medium sized
city (Raleigh, NC), near a moderately active airport (RDU- Raleigh/
Durham International), near several colleges, etc. it does a fine
job.
I wish I could at least "up-load" freqs to the Yupi, but it's
not a major problem.
However, the AOR owners all seem happy with their radios as well.
I've seen them in operation and "played" with them a bit. If the
Yupi is a better receiver, it is not so great a difference as to be
immediately noticable when you don't have them "side by side".
I use the Yupi quite a bit for shortwave listening. It does a
good job (but it's no SONY 2010), but it's AM filter is too
wide. The AOR's filter is also wide, but there is reputed to be
a fix coming real soon now.
Which one is built better? I, um, have dropped my Yupi a few
times (everyone forget that if I decide to sell it)... Hey! I'm
a radio nerd, not a well coordinated athlete! It's still doing fine,
and even looks great. I don't know about the AOR-8000... my friends
haven't let me drop theirs :-) (it seems that there are limits to
friendship).

Sorry I don't have a definitive answer. I like my Yupiteru, but
I suspect I would be happy with an AOR-8000 also. They're both
very good radios.

We have a club member who has had one for several years and is VERY
happy with it. He previously had a "log periodic" scanning beam from,
um, a vendor here in our state (N.C.), and it fell apart the first
winter. (And we have relatively moderate winters... occasionally
some ice, moderate winds, a little snow.) He was not at all satisfied
with its quality. The Create has handled the sleet, ice, snow and
wind with no problem.

[SNIP]
>For a LOT less money, you may do almost as well, if not better, by
>mounting a quality TV antenna in the vertical plane with a 75-ohm

Especially if you'll find an area that is just getting access to
cable TV service (perhaps less rare in our close-by rural areas than
in some other areas of the country). I have gotten a several old
TV antennas for FREE! (In one case rescuing it from an ignominous
end at the dump.)

>TV antennas are a hybrid mix of yagi and log periodic designs with
>very high gain in the bands of design, notably:

From what I've seen, most of the older ones are yagi based (and
therefore not so broad banded) and a good number of the newer ones
are substantially based on the log periodic design.

I've found the "corner reflector" UHF only antennas do a good
job for 800 MHz trunked services. (Public service trunked services
only! I wouldn't know how they would operate on the trunked service
as the top of the 800 MHz band. No siree... not me.)

> 54 - 88 MHz
> 88 -108 MHz
>174 -216 MHz
>470 -890 MHz

>Food for thought, anyway, and in many cases, can be tried by the
>scannist without undue expense, since many already have TV antennas,
>rotators, and masts laying around. The important thing is to devise a

I would recommend talking with your parents/aunts/uncles/friends who
may have had cable service for a while. A lot of pack-rats (and I
definitely am one) may have stored the old TV antenna in the "barn"
(or other storage location) and may now be ready for you to give it
a good home (for free).
Obviously, if you can get one for free, it's definitely worth a
try. But if you decide you'd like to drop the coins for the Create,
be assured it *IS* a well built antenna... as it should be for
the price.
You *can* use the Create to transmit on 2 meters, 220 MHz and 440 MHz,
but again, if you can get a TV antenna for free, a used beam for
one or more of these bands will be cheaper and give better performance
than the Create.

I have a friend that uses a baby monitor transmitter to monitor his
substantial radio setup from across the street (at his business).
He uses a scanner at the business to monitor the baby monitor
transmitter. It's not as good has having the whole radio setup in
the office, but it's not bad :-).
I work about 9 miles from my house and my office is in an RF
wasteland, so it won't work for me... maybe a dedicated phoneline :-).

ONLY DO THIS IN A WELL VENTILATED AREA! Sorry to shout, but
charging a lead-acid battery off-gasses hydrogen...
maybe you've heard about the Hindenberg.

For those in Rio Linda, hydrogen is very, very, very flammable.
Also very, very, very inflammable. I know, one of those *should*
mean, "it doesn't burn", but that's a George Carlin joke.

Anyway, hydrogen burns readily and is very dangerous.
Again, only charge a lead-acid "automobile" type battery in a well
ventilated area.

The OPP uses (at least the last time I was there a couple years ago) an audible marker tone that when the tone is active, does not use PL. When there is voice on the channel, PL is also present. Several scanner stores in Ontario modified scanners with PL decoders to allow listeners to filter out the offensive marker tone.

Now, some Uniden scanners are available that have PL decoders in them, and will allow one to monitor channels that use PL, and keep these marker tones at bay.

Be advised that only some agencies use PL, some use DPL. There are no scanners that can use DPL now, but I have heard rumors that Uniden is working on that.

The newer Unidens will allow you to program any channel with any PL. The old mods only allowed a single PL universally thruout the radio. If a channel used a different PL, then you were out of luck.

To hear Air to Ground 1 and 2 you should point your antenna at the shuttle.
Get a good program like Instantrak so that you can "follow" the shuttle.
Ken, you may be able to hear them better this way. Being located at Edwards
I seem to have a unfair advantage. :-)

I pick them up shortly after the deorbit burn, then they fade away for a
while. The hills get in my way while the shuttle is closing over the
Pacific ocean. About 4 minutes before the sonic booms I pick them up again
all the way to the end of runway 22. Hand held coverage after the booms
too. :-) If they ever seem to land here again, 169.400 works very well.

That antenna is way too short for decent performance on 46/49 Mhz. Try a dipole or 102" steel whip CB antenna, cut down to size. Should be good for a mile or more if you get it up high and in the clear.

Sounds like computer hash noise is being radiated from your loudspeaker cables straight into your scanner, Try winding the cable(s) several turns around a ferrite rod antenna, any old type bought or junked. The rod 'absorbs' the interference.The turns should be tight and close to the computer. Best solution is to use a antenna well away from the PC. Good luck, it's a tough problem to crack.

b> and pull out the old one.

Where did get the fix it sheet I have a AOR1000XLT and ever since I bought
1992,I have had nothing but problems with it for bad reception.I havea
Regency HX 1500 that has better reception then the AOR1000 XLT now it is in to
be fixed again .I wouldn't recomend this scanner to any one.. It has some good
features but that is about it. Just after I bought mine then AOR came out with
the AR1500 that has SSB on it ,that I wish the AOR1000xlt had,witch kind of
tick me off but then I guess thats scanners... Now I have a BC8500xlt thats
not bad but I wish there were some mods for the Cellular phones...

Well Bill, welcome to North America....we appear to have our share for
sure. Remember what they say about a rotton apple ruining the entire
barrel! Just gotta pick'em out and throw them away.

B-@>>Hi Bill - how's Cindy?

B-@>Finer'n frog hair, I reckon. :-) She sez hi to you and Janet.
-@>Gonad sez hi, too. Gonad's my Pit bull.......

Well hot damn, Bill. Surely my best goes to Gonad! Pit Bulls are a lot
like aligators - you just gotta smile and be as slow and nice to them as
possible. They get bad attitudes from time to time, so a smile and good
dog bone go a long way ya know.

B-@>You don't know about HIM yet. <g>

Nope. But I may just put Janet and my cat in the van one of these days
and drive out your way. That way we can BOTH see what kind of stink we
can raise together. Seems to be the year to visit Bill Cheek's place,
so I may just invite myself Bill. Keep the cokes cold, and the radios
warm. Anything special I need to bring with me? I understand the
rattlesnakes can be bad in the summer outside of town, plus the nuts
along the highways, so I'll be bringing Painless, my 357 magnum

with the long range barrel, and Janet will have her warm hands around a
44, so I figure we'll be more than ready for the snakes, hehehe!

B-@>May the force be with you,

And to you sir. Good signals.

2190. Pro 2037 update

Newsgroup: rec.radio.scanner
Date: 1996-01-26 00:00:00 UTC
From: sfritts@usit.net
Message-ID: <4e97v3$jo1@news.usit.net>
Source record: 241536

Recently, I posted some thoughts on the Pro 2037. I have found what may be a serious problem with the 2037-lack of sensitivity. After trying 3 of these scanners all with very poor sensitivity in the VHF Hi and Air bands, I am convinced it is a design problem. If you have this scanner, you owe it to yourself to check out the sensitivity of your unit.
Needless to say, I did not keep the scanner-got a refund.

: >Grove.
: >
: >

: You won't find any improvement unless the signal is low. I used a
: PRE-4 for satellite listening with good results.

I have a PRE-5 ahead of my R7100. The remote amp is mounted _inside_
the rotatable section of mast about one foot from my Create LPDA
antenna. The results are excellent. I can continuously vary the signal
level as indicated on the S-meter. I leave the amp on all the time to
keep it dried out. I get Q5 copy on one FLTSATCOM bird (23W) between
216.025 and 262.975. I previously used the PRE-4 and found it nearly
as good. It is over on my discone now.

If your PRE-5 is giving similar results I would guess that either your
unit is defective or your feedline is of poor quality. For week signal
VHF/UHF the PRE-5 is an excellant addition to your shack. I would
recommend it highly.

See, Bill (Grove) I can be objective when the product merits it.

Nate

The AOR AR8000 is a really cool radio. The alpha tags are great and the thing has more bells and whistles than any other scanner I know. But it also has a dark side. The most troubling of which it the wandering birdie problem. I bought one of these radios and today I put it in the mail back to Grove for a refund. I programmed less than 80 channels into it and of the 80, at one time or another, a birdie appeared on 12 of those frequencies. It is a known and well documented problem. AOR has not fixed it yet. The other problem is with the BNC connector. It seems to work loose and is difficult to fix. Good luck

>>Antenna Specialists makes a splitter . . . it's a MON-63 splitter and it's about $20
>I tried one of these a few years ago and it dropped the FM broadcast
>sensitivity to practically nothing. Did I get a bad one?

Probably not......the splitter was designed to provide AM Radio frequencies
(530-1600 kHz) out of the AM port, and everything else ABOVE these frequencies
to the other port.

Since broadcast FM signals are so close to the Aircraft, 2M Amateur, and VHF
Hi Public Service/Business/Marine/Paging bands, the FM frequencies are
filtered out of the feed going to the AM radio this splitter was designed to
work with.

: MOD.... and is the MOD like that used on the PRO-51 ?

Forget about dates and FCC ID which may not be present on overseas units.

The definitive method uses the SERIAL number. If it contains an A,
it is not modifiable; if there is no A, it is modifiable. No exceptions
have been reported to this rule, including overseas units. If anyone knows
of an exception, please report it to me or the group and I will change the
modifications FAQ accordingly.

Do not trade your 2006 for an Icom R1. The R1 suffers from front end overload and severe intermod. The only thing it has going for it is small size.
You already have the best scanner ever made!

Depending on which Pro-39 you have, you my be able to disasemble it, and clean the mica conductors with TV tuner cleaner or eqv.. If it has the "jelly" filled style, you're probably S.O.L. Also, you might contact RS for the current number of their parts department, and order a replacment and install it your self. Hope this helps.

Both your computer and your scanner had to "meet" minimum levels of interference before the FCC would permit them to be sold. The test set-up did not nessesarily duplicate every veriation in equipment configuration. This is basically why you have this problem.

1) Move your scanner AWAY from your computer. My PRO-43 is 3 feet from my system and I have no problems at all. On the other hand, my AM/FM/SW radio is 4 inches from my computer, and picks up interferece a various frequencies. I don't move it, because I don't give a s--t.

2) Check your ground on the power line that feeds your computer. For safety reasons, it's a good thing to check anyway. Your interfearence could be a tell-tell sign of a greater problem.

3) Try looping your speaker line throuh a ferromagnetic torid. If you do this, it will reduce the RF on the speaker line. Various sizes of torids are availible in the Electronics supply magazines. (heck, even R/S might have one)

4) Try shielded speaker wire. Something with a little more ummph than the typical R/S junk. If you can get your hands on it, RG/U 178B should work fine. The supplied speaker wire for most speakers is really poor stuff. Use decent connectors and make sure you do a 1st class job on hooking them up. If you must buy GOLD PLATTED CONNECTORS, remember that they do virtually no good what-so-ever at audio frequencies.

5) Sell your scanner at a highly inflated price and buy a better one.

6) Sell your computer and switch back to pencil and paper.

:-)

Hi!
A few months ago, I noticed a similar problem on the alt.2600 newsgroup
when the first version of PD came out.
Many people couldn't or didn't want to put the decoder circuit together.
I offered to build them for a modest fee ($50), and before I knew it, I
had several people ordering the decoders... All seemed very happy with
theirs.
SO, once again, I am offering to make the decoders available for $50, US.
(I have seen some smaller companies selling similar decoders for
$150-300!)
Let me know.

Sorry, I don't have a good recommendation for a scanning speedup
in the PRO-60 but I recommend against changing the CPU clock crystal
as it would have other, undesirable side effects.

You might program the same important freqs into multiple channels
to avoid missing critical transmissions. For example, I often
program the local sheriff into the first channel of each bank.
Other people have novel ways to organize frequencies in memory
and posted them earlier.

The power saver only functions in manual mode in most scanners
and wouldn't affect scan rate. I verify power saver functionality
by inserting a (fused) digital milliameter in series with the
batteries and placing the scanner in Manual mode. After a few
seconds of no activity, the current demand should start to cycle.
My meter also has a bar graph display which I watch
as well as the digits.

I use both analog and digital metered lab power supplies,
which show changes in current demand, too.

HAMFEST/COMPUTERFEST CALENDAR 1995/1996 - NORTHERN ILLINOIS
last updated December 31, 1995 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (708)979-5414, electronic mail: parnass@att.com. Thanks to Dennis Dale and ARRL for providing information.

JANUARY 1996

Jan 28 (Sun) - Wheaton Community Radio Amateurs hamfest. The Odeum exposition center, Villa Park, IL 8am-2pm, admission $8. For info call (708)545-9950. Adv tickets are $6. For adv. tickets write WCRA, P.O. Box QSL, Wheaton, IL 60189 Very crowded, somewhat overpriced indoor hamfest.

FEBRUARY

Feb 18, Sunday: Rock Island, IL - Davenport Hamfest, Info, SASE to Kent Williams, 4245 10th St., East Moline, IL 64244. tel (309)796-0718.

Feb 25 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

MARCH

Mar 24 (Sun) - Computer Central, Harper College (see notes at the end of this article).

March 24, Sunday: Sterling, IL - Sterling-Rock Falls Amateur Radio Society hamfest 96. Info, call Lloyd Sherman, (815)336-2434.

March 31, Sunday: Grayslake, IL - LAMARS hamfest, Lake County fairgrounds. Info: Francis Avellone, W9GLO 650 Green Bay Rd., Lake Bluff, IL 60044, tel (708)234-4124.

APRIL

April 21 (Sun) - Moultrie ARK, Arthur, IL. Info: Ralph Zancha, WC9V, PO Box 55, Lovington, IL 61937, tel (217)873-5287

April 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

MAY

May 11 (Sat) - Kankakee Area Radio Society, Peotone, IL. Info: Willis Bowser, K9IFO, 1210 North Riverside Dr., Momence, IL 60954-3452, tel. 815-472-2079

May 26 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

JUNE

June 1, 2 (Sat & Sun) - Starved Rock RC, Princeton, IL. | Info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341-1710, tel. 815-795-2201 Usually an excellent hamfest, | with sellers from Illinois, Iowa, and Wisconsin.

June 9 (Sun) - Six Meter Club of Chicago, Willow Springs, IL. Info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925 tel: 708-963-4922.

Jun 30 (Sun) - Computer Central, College of DuPage (see | notes at the end of this article).

JULY

Jul 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

AUGUST

August 18 (Sun) - DuPage ARC, Stickney, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517. tel: 708-985-9256.

August 25 (Sun) - Vermilion County ARA, Danville, IL. Info: * Gary Denison, KA9SKS, 14704 East 2750 North Rd., Danville, IL 61834-5610. tel: 217-759-7389.

August 28 - 30 - Antique Radio Club of Illinois, Elgin, IL. | RadioFest96. Holiday Inn Holidome and Convention Center, | 345 River Road, Elgin, IL 60123 Ph. (708)695-5000, | (847)695-5000 After 01/20/96. Info: Jeff Aulik, 1708 | Parkview Ave., Rockford, IL 61107 or Carolyn Knipfel, RR 3, | 200 Langhorn, Morton, IL 61550.

SEPTEMBER

September 8 (Sun) - Bolingbrook ARS, Joliet, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517, tel: 708-759-7005

September 13-15 (Fri, Sat, Sun) - Peoria, IL. ARRL National Convention. Info: Ron Morgan, KB9NW, PO Box 3508, Peoria, IL 61612-3508, tel: 309-694-2649

Sep 29 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Has anyone found this station on the air west of the Appalachians?
I did hear a wavering change in the noise level one night a couple of
weeks ago from here in Des Moines, but it was not identifiable.
If they are on the air at all at night, and the noise level is not out of
control, it should be an interesting listen. Wonder if they're open
for QSL's.

That's nice. Thank you for saying so. You are so kind.

> Not many people can take any situation and make thenselves
> look like such an asshole. Your talent is impresssive.

Thank you again. You are such a heartwarming lad.

> I vote for Bill for "Mark Furman" of the internet.

Oh oh. Really? Why? I don't think it is against any regulations to
discriminate against fruits, flakes, and snotballs. Correct me if I
am wrong, please.

> If the email I have received is any indication you don't
> impress people much with your antics.

Let me get this right for reference.....WHAT are you referring to? Do
you have some particular antic in mind? And you are flooded with
e-mail, I take it? :-))

> By the way are you William D Cheek Jr or Sr I was just wondering
> if your father or son was embarrased by your behavior.

I'm Sr. Paw is dead and gone. Jr. is sitting here right now
laughing his ass off at you. He thinks you're funny. And ol' Gonad
is getting interested in you, too. Gonad is our Pit Bull. Gonad has
a sexual attraction for fruits, flakes, and snotballs. Gonad isn't
very bright, but he's a pleasant sort of fellow.

> Vent a little spleen at me now.

You did very well on your own, Mister Amateur Radio Operator KC5EGG.
I couldn't possibly do better.............. :-))

> Get a life Jerk

Should I use you as a glowing role model? <giggle> <snicker>
<horselaugh> <wheeze> <gasp> I suppose you'd like to give me some
lessons now?

Go for the gusto.......if you can.

Bill

>you're good, but ya aint GOD...

Jerry Callam? That you, old pal, old friend, old dickhead? Soooo goood to run up on you again! Fantastic! Cool! Far out! Magnificent! I've been wanting to talk to you since a couple of years back when you jumped onto FidoNet to tell me how you were going to start up a newsletter and write some books to put me out of business!

I replied to you that I would be glad to help get you started and on your feet......and how I just loved competition....especially from those who are going to "put me out of business." And then I never heard from you again. So sad. I eagerly waited for you for weeks thereafter.

.......but the boys up Ohio-way said you tucked your tail betwixt your legs and ran all the way back to Mount Vernon to your Daddy for consolation and a nose-wipe. Sure enough, that's what they said, Jerry, old pal, old chop, old buddy of mine. They told some other stories about you, too........ they were all funny, though. About your power-play days in the All Ohio Scanner Club. :-))

But dang, it's good to see you again. My life is filled with a roller coaster of UPS and DOWNs.....but you are a definite UP, no two ways about it. Every time I look at or think about you, it makes me feel warm and gooshey inside..... You are such a fine specimen of magnificence, wonder, and sweetness, I just can't stand it. :-)

But you're right, old pal. I sure as tootin ain't God. Hell, I ain't even *a* god, nor a sub-deity. I don't walk on water, and I slip and bust my ass on ice. And when I raise a leg and break wind, the whole room clears out as the paint peels off the walls. Yer dern tootin I ain't no god. Whatever made you have to affirm that? Did you think I was God, and then found out different? Geez, man, how's come you didn't just ask me if I was. I'd have told you the straight scoop! Always have told you the straight skinny, man.

Matter of fact, I STILL have all our letters and communiques on file that I could use to refresh your gourd as to what was what; who said what; and what happened each step of the way. You said something about criticism above.....but geez, Jerry, that was never an issue. I offered to lend you a hand.....and you went off the deep end and flat

out shit your pants over the notion of me "meddling into your business." Dang, Herr Jerr, I didn't want to meddle. I just wanted to help a poor, unfortunate, misdirected, misguided, wretch up out of the quagmire of life..... but hell no, you'd have none of that. <shrug>

You're just sore, Jerry, old boy, how you blew it out your sweet patooty back in 1989 and never recovered from that fiasco. And then you're even more pissed that I took up where you left off and made scanner hacking a piece of cake and child's play. Heh heh heh heh!

But I am GLAD to run up on you again. You have been an inspiration in my life. You've been a GLOWING example of how NOT to do things, and what footsteps to NOT follow. It ain't a day that passes but what I don't say a prayer, "But for the grace of God, there go I....." and wipe the sweat off my brow..... Yepper, good to run up on you again, old chop! You have always made me feel gooooooooood!!! :-)

So how ya doing? You still gonna put me outa business? I'll be glad to help get you started, if you like. :-))

>Forget about dates and FCC ID which may not be present on overseas units.

That's true, but then the overseas models will not be an issue in the
first place.....so far as the cellular hack is concerned.

>The definitive method uses the SERIAL number. If it contains an A,
>it is not modifiable; if there is no A, it is modifiable. No exceptions
>have been reported to this rule, including overseas units. If anyone knows
>of an exception, please report it to me or the group and I will change the
>modifications FAQ accordingly.

There ARE exceptions to that. For the longest time, the "Realistic"
logo appeared on their scanner products. Then the PRO-43 was among
the first to appear with "RadioShack" instead of "Realistic". Those
carried an "A" in the serial number. But that happened BEFORE the
TDDRA of 1994, so a few "A" units were still modifiable for cellular
before the axe fell. I know.....I did a few....took me by surprise,
too.

So I went by the date code thereafter until Jonathon suggested the FCC
ID (for USA units) might be the most reliable indicator.

Ahhh, you know MORE than for which you give yourself credit.
Yes! Very directional!

> I got a bit confused when someone said install it in the vertical plane. I
> didn't know whether this meant install it pointing straight up into the
> sky or install it with the elements vertical.

Let's put it this way....the boom remains fixed in its original
plane, but simply twisted 9-degrees one way or the other. Your
question involved moving the boom from one plane to another, a
definite no-no.

> The reason I am asking is that I use my scanner mostly on airband, so
> directionality is one thing I don't want - I want to hear both sides of an
> exchange. I need to get a decent home base antenna (and a better scanner,
> my current one is a Realistic Pro-35 handheld), and if I can get away with
> using a old TV antenna this would be great if it's omnidirectional.

TV antennas are NOT omnidirectional, that's for sure. However,
this is not a perfect world and TV antennas are not perfect either.
The radiation pattern of the perfect antenna would be much like
the beam of a laser or a search light.

The radiation pattern of a TV antenna (and most other directional
beams) is NOT like a laser. It's more like a skewed omni with
ratios of 2 and 3 to 1 relative to unity in some directions and
-2 and -3 to 1 relative to unity in other directions. TV antennas
do not have "smooth" radiation patterns, simply meaning there are
"lobes" in the pattern....narrow angles of high gain adjacent to
deep nulls of less gain with maximum gain off the front end,
declining at some rate to minimum gain off the back end.

Generally speaking, you do not want to use a directional beam
for wide azimuth coverage....BUT....there are exceptions where
a directional can enhance specific comms. For instance, if you
live near the airport where the flight comm signals are very
strong, then you'll hear them no matter where the antenna is
pointed. Therefore, you could point it in the direction of
incoming flights and hear the aircraft much farther away than
with an omni antenna.

There are many other "operating variables" that would make a
directional antenna extremely useful to the compleat scannist.
For example, when one knows the radiation pattern (experience),
it's possible to rotate the antenna so as to pick up two different
points and reject undesired signals at the same time....(by careful
placement of the antenna's bearing...)

Another case is to use two antennas, one an omni and the other
a directional beam. Casual monitoring off the omni would be the
rule, but serious monitoring off the directional would be an equal
rule. A coax switch can switch between the two antennas for
convenience. In a word, your interests do not specifically
exclude the use of a TV antenna.......

> Would I be better off with a discone - that's onmidirectional, isn't it? Or
> just a big twig?

There's no answer to that question. It depends on how serious
of a scannist you are, and how much of yourself you want to
put into the pursuit. If you like OPERATING your station, then
a directional antenna will highly enhance your capabilities by
virtue of the CONTROL it affords you, to pick up signals
previously undetectable and to reject strong interfering signals
that otherwise used to make life miserable.

A directional beam (TV antenna or log-periodic) is just a tool.
Does a mechanic need a Crescent wrench? Nooooo, but most do.
Discone and omni antennas have low-gain....very low gain. And
many omni's have "holes" in their bandwidth. A discone is
relatively "flat" over several octaves, but it is also extremely
low gain (0-dbi) or even less! There can be 10-15 dB difference
between a TV antenna and a discone....i.e., the difference
between hearing a whole new world "out there", or almost nothing
at all.......

>
>Stephen

I have built this circuit, and had it running since PD1.02, the unit works ok from speaker audio on my Alinco DJ-580, I did make one change though. Added a capacitor .15ufd between pin 6 and ground, to shape the signal.

I have noticed that the AUTO function is not completely 100% accurate for the numeric/alpha decode, it works just fine in BAUD though. So maybe try setting the func0=numeric, and baud to 1200....

Here in Orlando, the freq, I monitor has three baud formats 512/1200/2400, and the 1200 has both numeric/alpha. Since the code has a bit of a problem differenciating between alpha and numeric, I set it to what group I want to monitor, until Peter gets the algorythm set later. The system here sends alpha text out in numeric format, as well as numeric data in numeric format, it is the same with the alpha here too..

Double check that you infact have +12 and -12 volts where required, when the program is running on the 741.

Hi,

I've been looking to get a new handheld scanner. I have a 2006 and like it alot but would like to get something portable. I have been reading here about the AR8000 and it sounds like a great scanner. I looked at the Yupi's but the 7100, 7200 can't be computered controlled. I have a couple questions that I hope some of you will answer.

1. I have heard the the AR8000 senstivity isn't very good on low ban VHF (40-50MHZ) range is this true. I like wanted to use the unit to monitor the California Highway Partol and they use 42-43mhz.

2. This birdie problem has really got me concerned. Are there any real remedies for this yet?

3. Can I order the unit from a place like Javiation without too much hassle? (I'm in the US)

I agree on the length being a little short, but living in the
LA/Orange county, CA area I almost wouldnt want more range,
as I would constantly lose my signal as a new one came on.

Also, it would be hell going thru the drive-thru windows!

I take exception to this notion of yours that *instant* information be made available to any clueless moron who pops up on the Internet without a bit of preperation! If they cant at least show SOME initiative by looking up the simple stuff..there is no way in HELL they`re going to be able to cope with the next 10 years, let alone a meaningful learning experience via Amateur Radio!

That the children in this country (USA) are unable to read is a given for some 45-50% of the population. That the ones who wander into the Internet whining and sniveling about wanting to "Know NOW!", and "Havent go the time to deal with the Library!"...is only more evidence that we have a serious problem. Part of that problem is people who refuse to stand fast by the traditional methods of learning. "LOOKING IT UP" has been one of those. Every time someone here bails one of these lazy little morons out, it's just another nail in that little jerk's intellectual-coffin! Go ahead - *give* him the answer! Then he wont look it up...wont understand WHY the answer has any significance!

The people who write me know that I wont tolerate lamers...because I think these kids deserve better treatment...they deserve to be given the LESSON rather than just the ANSWER. You apparently dont agree, you do them a great injustice - and you do not distinguish yourself as a teacher!

NW Iowa would make Offutt AFB, your nearest AF location, but if you live more than 30 miles I doubt you will pick up much.

The tower and planes would be between 270 and 350 Mhz usually, your best chance would be the approaching/departing planes, if they fly in your direction.

I am lucky to live in the LA/Orange county, CA area so I have several AF, Marine spots around. I only listen when I am within eyesight as otherwise it just is lousy!

I have this same problem with my Pro-39 scanner. The problem seems to be a bad connection between the keys and the board. Also, I notice that the problem only occurs with the buttons I use the most. Please let me know if you learn of a remedy to this problem.

Continued from Message 39106...

I heard Motorcade P (President), F (First Lady), V (Vice-President), C, D, and S. I am unsure what C, D, and S stand for. Possibilities are Cabinet, Dignitaries, and Supreme Court.

Also, there probably was substantial simplex traffic near the Capitol grounds and inside the building. I was too far away to hear anything but the repeater traffic, but this is probably where the main ops were anyways.

Anyone with further info. please post it for the benefit of everyone...

David

Ramsey Electronics has Model SS-70A that does this. $79.95
assembled or about $55 in kit form. Their order line is
1-800-446-2295 to order or get a catalog.

Ham radio operators are just a bunch of glorified C.B. radio operators anyway. They will do anything to keep others from using their bands, namely requiring a code test.

Face it, nobody really builds their own radios any more. Look in the ham radio magazines and what do you see? Answer: mega-dollar ham radios. This is the only difference between a ham radio operator and a C.B. radio operator.

There is no reason why anyone shouldn't be able to get one of these radios and get on the air. There are portions of the bands reserved for CW so why lock others out of the other portions of the bands. Does knowing code make a ham radio operator better at using SSB? Answer: hell no, it is simply a thinly veiled attempt to keep others out.

If this attitude were pervasive, we would have penmanship tests to use a state park, pie eating contests to drive on the public highways and height requirements to run for elected office. The code test is simply no longer relevant to operating a ham radio.

Ironically, these ham radio operators have been so damn pig-headed that the numbers of operators are in the decline and many of these bands are starting to look like prime auction material for the F.C.C. In the end, these bands will end up owned by some telecommunications company for wireless networking and none of us will be using them without paying a monthly fee to the phone company.

Hmmmm, Thats why the Ham bands are so nice. No hill-billy CB operators
with their audio turned up so high that you can here them 10 accross
the whole dam band

I see many radio kits in the Ham Magazines. From HF to UHF.
Any fool can buy a CB at K-Mart and get on the air. But a ham at least knows
how his radio works! Also thoes "mega-dollar" radios are not for everyone.
Hell go to any hamfest and get on the air for 100 bucks!

> There is no reason why anyone shouldn't be able to get one of these

Sounds to me that you just dont want to take the time to learn the code.
Its not hard at all, hell an hour a day for a month and you will do 13wpm.
Its true that code is out dated, but if you really want HF complaining
about the code will not get you there. It is a international agreement that morse
code is a requirement.

Hi all..

For a while now I have been using the Pocsag decoder with great success. I am trying to set up a list of frequencies used abroad, so when I travel to another country, I know the frequency to tune in to and receive messages using the PD program.

So if you are outside of the Netherlands, and you are using the Pocsag Decoder, please Email me the frequency, bit rate being used and network name. I will compile this into a monthly updated list, which will be posted here or emailed to you.

When you send me Email, also let me know if you would like to receive updates of the frequency list as they become available.

Alex

The freqs I got at this point are;

164,350 mhz - Benelux paging network, 512 bits
159,990 mhz - Netherlands national network 1, 512 bits
154,980 mhz - Netherlands national network 2, 512 bits

Who can send stuff to add?

Alex

I recently received a catalog in the mail hawking various electronic gadgets. One was a DTMF decoder. The ad stated that it could be hooked to a scanner to decipher codes. What codes? Was the implication of this ad that it can be used for something illegal?

What are DTMF decoders supposed to do and what can they do if hooked to a scanner.

Thanx.

You do not need a decoder to listen with a scanner. Just dial in there
freq. and listen. Gary

Hi, I was wondering if there is anybody who lives in Victoria Bc,
Canada that has a scanner who would like to exchange local frequencies
or other local scanner info by e-mail.
I have lots of frequencies and about 25 ive found myself (not in any
books)
Also i will be starting up a home web page soon the address is
http://www.coastnet.com/cheply - its not working yet but it
will be soon,
bye, Cory

I owned a Yupi 7100 for two years and just sold it to purchase an AR8000. If computer control and fancy features don't thrill you, go with the 7100. I had a chance to compare the two briefly and feel the Yupi is the superior receiver. It is more sensitive, and more "solid". However, the AR8000 is the way to go if you want lots of customizable features and alphanumeric tags, etc.

I do believe with an adequate antenna, the AR8000 performs as well as the Yupi. But, the antenna is more crucial to the AR than the Yupi, which is very sensitive with just a whip. Feel free to e-mail me with questions!

From: elewis@dsp.com
Message-ID: <3109a646.784602@news.calon.com>
Source record: 241392

While looking around Radio Shack today I noticed a TV- FM amplifier with a band width of 50 - 890 mhz and 20 db gain with a control for the gain. I bought one to try with my scanner. the problem is the amp is 75 ohm and my coax ,antenna and scanner are 50 ohm should I worry about signal loss from the mismatched impedence or is this something that I don't need to worry about. If this unit works I will report back to the newsgroup as this unit is 1/3 the cost of a pre-5

You might also consider the PAR Electronics Helical Resonator filter(s) - we have had considerable success with them here in Albuquerque, where some pagers are running 500 watts(!) The model I have, the VHFDN152HT, is small enough to fit on an HT, and has BNC connectors. They have some slightly larger models with UHF connectors. Mine knocks down pagers at 152.84 by 43db, by my own measurements, with an insertion loss of 1db or less, depending on freq.

Another company, called DCI (something) also makes some Helical Resonator filters, but I haven't tried them. Their ads indicate that they would perform about the same as the PAR filters.

We have tried other types of filters here, to solve this pager problem, and the helical resonator types win hands down.

Good luck!

I am interested in a GOOD scanner management program for a scanner. I have seen a number of programs offered on the Internet but, for the most part, they are written for DOS or Mac. What I require is a Win95 application that is true 32 bit and supports multi-tasking and threading. The program must maintain a memory bank and variable searches with decoding options.

If you are aware of any program that may fir this requirement I would be very happy to hear from you.

Marshall Norton.

It's been a long time since I was in school studying EE. I originally tried using a 100pf capacitor instead of a .1uf capacitor, thinking 1000pf = 1uf. Wrong! 1000000pf = 1uf! Now the circuit works okay, but the percentage of pages w/o erros is from 45-80%. I just added a .1uf capacitor between the Op Amp output (pin 6) and ground, and my percentage of error free pages is 80 to over 90%! If I looked at the output on a scope, I'm sure I'd see a difference.

Have you seen anything really interesting? The most interesting thing I've seen so far is the AirTouch Paging Sports Update w/ the NBA scores.

Did you pay the shareware fee to get the full version? Did you have to send an international money order for 20 pounds sterling?

Oh well, I'm glad it works now. Thanks!

Stephen

>Thanx.

DTMF stands for Duel Tone something something.

DTMF is also known as touch tones. It is the tones that your hear on
your home phone when you press the buttons.

A DTMF decoder is a circuit the monitors the tones and displays them
telling you what was heard.

IF you wanted to use them to figure out what was being dialed over a
phone patch then you could connect this decoder to a reveiver and have
it display access codes, phone numbers, credit card numbers etc.
whatever some one is entering using these touch tones.

DTMP decoders (some) can even be used to control things. I in the past
build a controller that would listen to a series of tones and when it
heard the correct ones that I would transmit via a two way radio, it
would turn on a light or alarm or pick up my home phone and connect
the radio to the phone so that I could make a phone call, etc.

Other tones you may have heard about are PL Tones aka private line
tones. These tones are sub audible and are used in places where many
users use the same channel. Companies do not want to hear everyone
else on the same channel so each company has their own tone and
monitors the channel for the specific tone. Only when the specific
tone is heard will it then let their radios monitor the
communications.

Hope this helps...

The operative phrase to pay attention to in this thread is as follows:

>A DTMF decoder is a circuit the monitors the tones and displays them
>telling you what was heard.
>IF you wanted to use them to figure out what was being dialed over a
>phone patch then you could connect this decoder to a reveiver and have
>it display access codes, phone numbers, credit card numbers etc.
>whatever some one is entering using these touch tones.

If you have one of these decoders you can detect a variety (but not all) of tone codes transmitted over cell phone, cordless phones, ham radios, etc.

Likewise, the next time you use your cell/cordless phone to purchase something by CREDIT CARD, remember, someone may be listening. When using your cell/cordless, NEVER give out credit card numbers, your social security number (heck, never give that out anyway!), or other information that can be used by a less than honest person. That includes things like letting your neighbors or the paperboy know that you'll be out of town for the next two weeks. Stuff like that going into the wrong ears will really mess up your vacation when you get back. This stuff goes on a lot, and not just in the big cities. When in doubt, use a phone on a wire.

"You can sit here in the waiting room or wait here in the sitting room."

My location is N.W. Iowa. >>

The 185th Fighter Group, Iowa Air National Guard, is located at Souix City Municipal Airport in NW Iowa. I often hear them checking in with Minneapolis center on 269.0 Mhz from my location in Omaha Nebraska. They fly F-16's and go by the callsign BAT.

The 132nd FW, IA ANG (HAWKEYE), which are located at the Des Moines International Airport, may also be heard when they are in the Boone MOA (military operations area.) You may be able to hear their F-16's checking in with "Minnie" on 343.8 Mhz.

I don't know any tactical freqs for the above, but you may try a search between 138 and 144 Mhz in the AM mode. Look into getting a military air freq guide. Grove and CRB Research are two places to look for such a guide.

BQFY79B@prodigy.com (Michael Risney) replies to Tom's posting:
<< NW Iowa would make Offutt AFB, your nearest AF location, but if you live
more than 30 miles I doubt you will pick up much. >>

Although you may be to far away to here ground comm's for Offutt you may very well hear their birds in the air. There is an AR (air refueling) track that runs from O'Neill Nebraska to Fort Dodge Iowa that is often used by Offutt's 55th Wing aircarft. They are of course not the only ones that use it. Oh yeah, the frequencies!

238.9 MHz (AR-105 Primary)
320.9 Mhz (AR-105 Secondary)

Also, program 311.0 Mhz and 321.0 Mhz into your scanner. They are the Offutt command post frequencies. Listen for callsigns like: SNOOP, COBRA and LOOK.

Gerald M.

From: ckuter@ix.netcom.com
Message-ID: <4edfpc$emm@reader2.ix.netcom.com>
Source record: 241414

I am looking for my first scanner. I live close to O'Hare airport and would like to pick up airline communications. I also live close to some high power lines, about one block east and two blocks south of my house, and want a unit that would not be affected too much by those lines. I would like to spend about $200, but would consider more if that is what is needed for a good unit.

Thanks

From: michael@alexander.terranet.com
Message-ID: <michael-2701961142300001@alexander.terranet.com>
Source record: 241417

Hackers have long had an interest and even an affinity for scanning and ham radio--the reasons are pretty obvious I guess. Anyway, two recent books--Takedown by John Markoff and Tsutomu Shimomura and The Fugitive Game by Jonathan Littman--should be of interest to many scanner buffs. Both stories are about "darkside" uberhacker Kevin Mitnick and go into depth about how Mitnick used scanners and cellular phones to stay a step ahead of the law and then how the law and Shimomura used modified Oki cellphones/laptops and other gear to nab Mitnick. Both are fun reads. The Littman book is the more interesting and better written of the two, but you should really read both of them if you want the complete picure on Mitnick.

Nothing is "private" when you are using a cordless telephone! Don't be
so foolish. If you want "privacy", you better either encrypt your
46/49Mhz RADIO TRANSMISSIONS or else figure out a way to keep them off of
my property!

>Monitoring cellular calls for fun is one thing, but ratting on the
callers
>to the authorities is pretty low IMO.

Unless you're engaging in illegal activities, there's really nothing to
be worried about, is there?

I just got a BC890XLT for free and know little about scanning. I use the 890 to listen to ham 2m. I have the following questions;
1. Is the 890 identical to the Radio Shack Pro2036?
2. Are there other BC or RS models with basically the same main PC board?
3. Are there any mods to make it cover 800-899MHZ?
4. I don't see any comments on it on the news group. Is it a good/bad unit?
5. Why won't it pickup a 49.875MHZ baby monitor when monitor is next to it?
6. It won't pickup 49.860 cheap walkie-talkie. Is that because walkie-talkie is AM and scanner is looking for FM?
Thanks.

Near as I can tell from the two I tested side-by-side,
the BC890XLT and PRO-2036 are identical except the squelch
controls work in opposite directions and they have different
coloring and labeling.

The PRO-2036 manual is better than the BC890XLT manual.

I reviewed both in June 1995 Monitoring Times and was greatly
disappointed in their performance.

Sounds like your scanner may be broken if it cannot hear
a baby monitor or walkie talkie in the same room.

2299. AR8000, narrow filter mod

Newsgroup: rec.radio.scanner
Date: 1996-01-27 00:00:00 UTC
From: klimasewski@fccvde.enet.dec.com
Message-ID: <4edln3$6l9@mrnews.mro.dec.com>
Source record: 241421

I have designed a switching scheme that allows the user to select
the stock 12KHz AM filter or the narrow SSB 4.0KHz while still in
the AM mode. I have found this to make a BIG difference when trying
to receive a weak shortwave station next to a very strong one.
The only part required is a switch and some wire.
My mod has no effect on the use of the DS8000 speech inversion accessory.

Send me email if interested.

Why he encoded a text file is beyond me. However, if you took the trouble to decode the file, boot up a text viewer, and read the file, you would have seen that the state regulations are somewhat hazy as to who can have a scanner installed in their vehicle.

The key word in this stature is INSTALLED. That basicly means that it is attached to your vehicle via its power cord, antenna cable, or just bolted down. Either way, it all gets down to who catches you, how far they want to bend the interpretation, and how badly you pissed them off. A handheld scanner in your car is not "installed", but can it be interpreted as detrimental to the public safety. Are you using it to aid in a crime? Are you constantly showing up at the scene of emergencies? Are you in the way?

Figure it out. If you're noticable at the scene, it's probably because you've over stepped your bounds.

From: NJFM83A@prodigy.com
Message-ID: <4eg1mk$17g0@usenetw1.news.prodigy.com>
Source record: 241289

The mod for cell restoration & speed increase for the Pro 2006 is VERY easy. I only regret not having the mod sheet, as I loaned it out without any back-up copies! Two diodes are to be cut, one enabling full 800 Mhz and the other giving a slight scan speed increase. The mod works with no side effects, as I restored mine about 3 yrs ago & has been ok. I will seach other places for the diodes to be cut & will get back to you ASAP.

Hello Bill,

This thread about using a tv antenna, but I have a question about it....

I use my tv antenna for ....tv! I'd like to add a rotator and also use it for scanning. Would it be better to use it horizontally or vertically? Which would be more forgiving of the loss of signal strength?

Also, would the directional aspect of such an antenna more pronounced when the antenna is vertical or horizontal? (which way is the beamwidth narrower?)

Thanks, Bill for all of your help here.

>>before spending $228.00

I have a CLP5130-2 antenna, and find it adequate, but not exceptional in performance. Its main attributes are that it is built to withstand the wind and weather, and it is well engineered. I have found that it is absolutely necessary to use a non-metallic mast when mounting the antenna in the vertical polarization (which is used most widely for vhf/uhf communications). Of course, this would be true of any vertical that is mounted close to the mast, even TV antennas. A friend bought a "scanner beam" from a well-known company for about $60 that seems to perform equally well as the CREATE beam, but is prone to being bent into new configurations when one of our spring zephyrs kicks up (sometimes near 90 mph gusts). Finding a non-metallic mast that is long enough may be a problem; CREATE sells one made of fiberglass, but it is only four feet long, which means that the active part of one side of the antenna will still be parallel to metal parts of your tower (assuming you mount the antenna in a tower with rotator). This is not good, either. An 8-ft mast is better. Using a metallic mast makes the SWR very weird on different bands and throws the directivity all to heck.

Good scanning!

Date: 27 Jan 96 13:09:45 EST
From: Lew Rieth <102657.2726@compuserve.com>
To: STEVE <ESSAY@aztec.asu.edu>
Subject: Some questions

Hi Steve,
I was wondering if you could give me an antenna length. Now that
I carry the Most Accurate Clock along with us, I need to rig an
outside antenna for it. The internal telescoping rod isn't adequate
inside a metal trailer.....
It scans 5, 10, & 15 mh and locks on one of them when it gets a
data feed. I am thinking that a long wire would probably be the
easiest. Opinions?
From your broadcast days, do you know anything about cable TV
licensing? The member park we belong to runs its own system, 11
channels for $60 a month. The picture quality is mostly lousy to
unwatchable. I realize that cable has been deregulated, but I assume
that they still need a license to operate. Would it be thru the
Arizona PUC or the FCC? I am thinking of pulling their chain a bit
since the cable charge is mandatory, even though many of us have
satellite sets and don't use it.
Since they rebroadcast the Phoenix stations, would they need an
agreement with each station to "sell" its signal?
Just wondering.....
Lew

****

You CAN get the service manual from Uniden Customer Service!

(317) 842-1036

If you work on your scanner without a service manual, you're
setting yourself up for trouble!!

But anyway, the Discriminator Output (baseband audio) for
the Uniden BC-200XLT is at IC-401, Pin 11. The IF Filter
is FL-200 at Pins 3 & 6 of IC-401.

Jason,

I purchased an Optoelectronics MiniCounter 3300 from Grove Electronics about a year ago. While it is a quality unit and I haven't expeirienced any problems with it, there are a few things I wish were different.

1) With this unit, you need to be watching the display for a 'hit'. When it zeros in on a freq, you need to hit the 'hold' switch to stop the counter so you can write the frequency down or enter it in your scanner. SO, it would be nice if the counter logged frequecies by itself without you having to watch the display.

2) The frequency range is nice: 1MHz - 2800MHz. But, they break it down into two counting 'bands' I guess you could say. The first is a "250 MHz" range and the second is a "2.8GHz" range. I think this means the first covers 1-250 and the second, 250 - 2800. I wish it were split into bands similar to what our scanner uses.For instance, if I'm searching for a frequency I know will either be in the 155 MHz area OR the 460 MHz area, I don't want to have to monitor awhile on the counter's 250 MHz range for 155 MHZ and then have to flip up to the 2.8GHz range for the 460 MHz freq. Know what I mean? If someone transmits on 460.xxx when I'm searching only up to 250 MHz, I've lost that potential hit.

I could live with it a little easier if the ranges were 1-512 (or somewhere thereabouts) and 512 - on up. That would put all 'old' and conventional systems in on area, and the 800MHz band in another.

The best scenario is one range of 1- 1000MHz and a second from 1000MHz - on up. But, they didn't really design this counter for a scanner's use. Frequency counters are really test equipment, and have to be adapted somewhat to our purposes.

Which brings me to the last point : antennas and filters. While the counter has two 'ranges', you really can't maximize your reception unless you have the proper antenna (this is common to all radio reception of course). There's the trade off - you want to be able to log hits in a broad range of frequencies, like me, at least 30MHz to 512MHz. This would mean a broad banded antenna, which also means lower gain, i.e., you have to be closer to the signal source to receive it. If you want to be farther away from the signal source, use an antenna designed specifically for a single 'band'. Of course, this is usually not practical because we seldom know what band the frequency is in that we want - that's why we're using the counter!
Grove sells a set of antennas for different ranges. So, if you know what band you want to search, put on the proper antenna. They do have a

telescoping antenna whose length can be adjusted on the fly as you encounter different situations with your counter.

The other item is filters. While I haven't yet used any, I am real close to buying some. The interference on my Pro-43 from a local paging transmitter is awful. And you'll find that pagers and broadcast radio will cause your counter to lock on their freq's when you're searching for a frequency of interest. So, check out the paging transmitters in your area. If you're planning to use the counter near them, get filters that block out those particular frequencies. But, be forewarned, they're not cheap, especially if you need several different ones for different areas, applications or radios

Hope this helps you,

Hi Tom,

> I've been searching 225-400 for military tfc without luck.
> Does anyone know any active freqs in that range or at least let me
> know what part of the band has the most action.?

If your searching for active frequencies - keep your search ranges to
smaller "segments" - say 50MHz at a time.

220-250MHz, 250-300MHz etc, maybe even less. Spend a day or two
seraching this one band then try another. You will get far more "hits"
than trying to search the complete 225-400MHz in one go - its rather
like going down to your local shopping Mall hoping to meet up with
somebody you think *might* be down there - chance of bumping into them is
slim.

The UHF use 25KHz steps although in the US many frequencies seem to be
100KHz steps. Don't use 5Khz steps if you have a radio that you can
select the step size on.

Happy Listening.

> Is there a difference between the UK and US computer interface.
> any info would be helpful.

In terms of allowing control of the radio none. They all allow
communication with the radio.

AOR CU-8232 is self powered from the AR8000. The CU-8232 can also be
used to clone the cotents of one AR8000 to another without
the need of a Computer.
It can only be used with the AR8000

Opto CX-12 Requires a seperate 12v supply. Uses two leads with 3.5mm
sockets which "Plug" into a small "vero board" connector.
You can modify the AR8000 with two 3.5mm sockets that "do
away" with the need to use the AR8000 flat ribbon connector
The CX-12AR can also be used with Icom equipment and other
Opto devices such as the Scout.

AR8000INF Don't really know much about this. Powered from your PC I
beleive. Like the CU-8232 can only be used with the AR8000.

Hope this is of some help.

Actually Bill is a simple form of amusement much like owning a Mortimer Snerd dummy but you don't have to be ventriloquist. When this all started, at least the attacks on me, I had offered what I thought was a constructive suggestion. Bill didn't seem to like that. Since then I have just been having fun pushing his button. The guy is so stupid he doesn't realize when he is being manipulated and he reacts just like he is supposed to.

Like most simple toys pulling Bill's chain rapidly looses its appeal he is just too easy. I showed the transcripts of the past few days to a couple of psychologist friends of mine they found him somewhat interesting. I think terms like paranoid delusional and not socially developed came up but that is not my field.

Since he is so socially challenged I went back through some of his technical work which is much more in my area of expertise. Here he has his moments but overall does not do much more that I would expect from a mid-level elec-tech or a first year EE student. These observations lend credence to the allegations that surfaced a few weeks ago that some of the early work was "borrowed" or researched from others. I don't know if this is so but my experience as a referee for journal papers tells me it might be.

Except for a few "Toadies" he doesn't seem to get much support so I got to thinking suppose I wanted some voices of support from time to time what would I do? Well net accounts are only a few bucks a month, and if you pay your bill they rarely give a damn who you really are, so are a bunch of apparent avid supporters worth say $100 a month? I leave this thought as an exercise for the student.

One last thought before I disapear back into my usual haunts. I was going to jerk old Bill around for a while just because he seems to need it so much but then I got to thinking about how full of rage he seems to be every time he posts to or about me. I got to thinking about that big throbbing vein on his forehead and the one mirroring it inside. I don't want to be responsible for his aneurism. Let him delude himself that he has won some big victory and run me off, he doesn't seem to have much else in his life.

Jerry

2351. WANTED: Scanner w/ continuous coverage

Actually he doesn't bother me at all I have been amusing myself by pushing his bottons for a few day but like any simplistic toy he grows boring. It is interesting how easily he is enraged by nothing, that coupled with the fact that he is too stupid to realize he is being manipulated makes him an easy target.

As to his supporter(s) consider my thesis presented in my other post on this subject. Well I'm off this topic as it really is a waste of bandwidth. If old Bill is stupid enough to think he has won or chased me away bless his pointed little head let him think so. Having a battle

of wits with this guy is the moral equivilent of hitting a cripple and I just can't drag myself down to his level.

See Ya Jerry

2354. ForSale: Opto APS-104 Active PreSelector, Icom IC02AT

OptoElectronics APS-104 Active Pre-Selector
-Tunable band pass filter system
-10MHz to 1GHz
-Continously tunes over more than 5 octaves
-Maintains a constant 4MHz bandwidth over entire range
-Electronically tunes
-Ultimate Security Sweeper
-Extend Near Field detection distance 10x
-Includes Internal Rechargable battery pack and charger

New this is $1000 from Opto, I am asking $750 or best offer

The unit is in perfect conditon, and has seen very little use.

The perfect use for this is in conjunction with the Scout or Interceptor,
it provides a very significant boost in capture range.

I was using it with the Scout/AOR-8000 combo and it worked great.

I purchased this for a project and no longer need it.

I was using it with the Scout/AOR-8000 combo and it worked great.

Icom IC-02AT VHF HT
-IC-CM8 Hi-Capacity batt (a few months old)
-Icom Speaker Mic
-IC-CM30 Rapid Charger
-Manual,Schem, etc
-Marine Mod (144-165 TX)
-Very good condition

$??? Best offer

Bought a new dual bander, not using it.

Hey,Bill, nice batch of replies. Quite comical. Since you seem to be a scanner buff, I would like to ask you a question. Someone told me it was possible to make an external antenna for my Pro 2006 out of copper pipe and fittings. Is this true? Where can I obtain the necessary info to build one? Since I am Refrig. Mech. by trade and somewhat of a plumber (I usually don't admit to it) the pipe and fittings are readily available. Any assistance would be greatly appreciated.
On another note, when listening to police, fire frequencies, I hear the repeater tone before every transmission. Is there anything I can do to eliminate this??
Thanks and happy scanning

Hey, I'm not looking for an argument. You wrote
"Then the PRO-43 was among
the first to appear with "RadioShack" instead of "Realistic". Those
carried an "A" in the serial number."

and I wrote that my "RadioShack" 43 did not have an A in the serial number.
Since these two statements are contradictory and I've got the scanner in
my hands (well, in my desk at the office), I'd prefer to sort it out
before I modify the FAQ.

Would you mind consulting your records and posting the serial numbers of
the units with A serial numbers that were modifiable? I've no problem
acting on solid information like that.

Thanks.

Someone had posted a question wanting to know about the Florida scanner law. The attached text file is the 1995 Florida State Statute Chapter 843, Section 16 that explains although not clearly who and where you can have a scanner. As I read it, you CAN NOT install a scanner in your vehicle UNLESS your are an emergency vehicle, a crime watch vehicle, are a FCC licensed Ham Radio Operator, or an alarm co. employee..

Hopes this helps...

from what I understand, you take off cover and there are two diodes
visible in the front. clip both, one gives you faster scanning speed
and the other opens up the cell phone frequencies.

Y Bill...I did get your attention. I have all your letters also, as well as your same friends and ENEMA-ies. I guess you just want to run everbodys enterprises, and maker it all better for us all. I use scanners, repair them, and write articles also, and not just under my name or handle, but I do it as a hobby, not a lifeline. I'v gave away more than you've sold, wasn't in the hobby to get rich. That's why I ran the AOSC on a low budget, the same for the 2004 Newsletter. I wasn't purty' but it got the job done. I didn't get many complaints, but I remember yours....do this, do that. I didn't give up the race, wasn't in one, just trying to keep the hobby alive with out gouging eveyone. Shucks, that's why I kept the dues in a coffee can...

2378. Seattle PD Trunking Freqs: My best guesses

Newsgroup: rec.radio.scanner
Date: 1996-01-28 00:00:00 UTC
From: dan@halcyon.com
Message-ID: <4eevkk$dfj@news.halcyon.com>
Source record: 241371
Cross-posted to: rec.radio.scanner,alt.radio.scanner

A while back I asked if anyone knew the frequencies for the new Seattle police 800MHz trunking system (which recently crashed). I did get one response from a nice person who is starting up a web page about Seattle scanning (check it out at http://www.wolfenet.com/~daydream) but I didn't get any actual frequencies. So I started looking around...

I went to the PerCon Frequency Database Search (at http://www.perconcorp.com/db_srch.htm) and started looking for anything in Seattle with a YP service code (YP is trunking police). Then I took the call sign that seemed appropriate and looked that up on the same page. After weeding out the input frequencies, I came up with a list of 21 freqs. 21 appears like an odd number for a trunking system. I would have guessed 20 or 25. Here's what I came up with...

851.0875 WNUB692 SEATTLE, CITY OF YP
851.1375 WNUB692 SEATTLE, CITY OF YP
851.1875 WNUB692 SEATTLE, CITY OF YP
851.3625 WNUB692 SEATTLE, CITY OF YP
851.4125 WNUB692 SEATTLE, CITY OF YP
851.8875 WNUB692 SEATTLE, CITY OF YP
851.9375 WNUB692 SEATTLE, CITY OF YP
851.9875 WNUB692 SEATTLE, CITY OF YP
852.1625 WNUB692 SEATTLE, CITY OF YP
852.6375 WNUB692 SEATTLE, CITY OF YP
852.6875 WNUB692 SEATTLE, CITY OF YP
852.8625 WNUB692 SEATTLE, CITY OF YP
852.9125 WNUB692 SEATTLE, CITY OF YP
853.3875 WNUB692 SEATTLE, CITY OF YP
853.4375 WNUB692 SEATTLE, CITY OF YP
853.4875 WNUB692 SEATTLE, CITY OF YP
853.6125 WNUB692 SEATTLE, CITY OF YP
854.0875 WNUB692 SEATTLE, CITY OF YP
854.1875 WNUB692 SEATTLE, CITY OF YP
854.2375 WNUB692 SEATTLE, CITY OF YP
854.3625 WNUB692 SEATTLE, CITY OF YP

So, here are my questions. Does anyone know how many channels are in the SPD system? Does anyone have a better / more complete list for the SPD system? What other new trunking system are on line in Seattle? I have heard that Seattle Fire is using trunking now. Are they on the same system as SPD? If not, can I find them by looking for YF service codes in Seattle? I have also heard that King County Police will be going trunking also. Will they be on a system all by them selves? If not, who will they share with?

Please post any info you may have.

Thanks

>What are DTMF decoders supposed to do and what can they do if hooked to a
>scanner.

>Thanx.

A DTMF decoder may, indeed, be used for illegal purposes. For example,
let's assume for a moment that you have a modified scanner which will
pick up cellular telephone transmissions. Now let's say that while
listening to your scanner one day you hear a person key in a calling
card number to make a long distance cellular call. Well.. a DTMF
decoder would decode the series of beeps you heard when the person
key'd in the calling card, into actual numbers. Hence, the actual
calling card number is revealed, and the eaves-dropper would then be
free to place LD calls using the person's calling card. Nifty.. eh? I
think so. heh.... that however is just one implication. I suppose it
could be used for something legal, but the general concensus for DTMF
decoders in conjunction with scanners is that it will be used for
something on the seedy side :) .. hope this helps.

I recently acquired a pro39 (for xmas actually). It is my first scanner. It is modified for cellular and cordless telephone transmissions, and that is what it is primarily used for. It has a stock antena etc. I really don't know too much about it, I was wondering if anyone knows of a pro-39 FAQ or something of the like, possibly someone could concoct one of their own and relay it here, or to me via email.. It would be greatly appreciated. I enjoy the scanner emensley, but now I am content on expanding my capabilites, by any upgrades necessary to receive maximum effeciency in my every-day scanning. If anyone could shine some light on this subject, in any way at all.. please respond via email. Any conversation would be greatly appreciated.

>Does anyone know of a description of a modification for the computer
>interface port on the AR8K to go to a couple of stereo plugs on the side,
>similar to the Scout modification?

All you need to do is carry out the Scout mod but use a STEREO jack
socket and wire the TX data line too and not just the RX data line as
required for the Scout. That gives you GROUND, TX data and RX data. This
stereo socket can then be used for a Scout connection or as an interface
connection to a PC. No need for two sockets.

Me three!

Too much of-topic crap here. (He says as he posts an off-topic message.)
I'm quite prepared to E-Mail all off topic peoples with many meg's of

garbage, and as many have complained, and none have heard, this is what I must be forced to do to help reclaim the group.

If that's a Motorola flip phone, then you shouldn't remove the battery, and
short the pin on the phone between the battery terminals to the negative
terminal (the one closest the edge.)
then you shouldn't replace the battery and power up the phone, otherwise
you might get into TEST mode.
If you did, then you shouldn't press # 08 # to un-mute the audio, then
you shouldn't press 1,1,x,x,x,# (where xxxx is the channel number to
listen to, from 1 to 823) because if you did, then you could listen to
other calls, which would be illegal, so I have told you this so you know
how to steer clear of the law.

The federal government recent gave back 235 MHz of spectrum to other services. Anyone know what the actual frequency blocks were? I'd be interested in knowing what sections of the spectrum were given away.
Gary Allen

:>
:>4. Alphanumeric tags on all channels
:>
:>
:>
I just bought a UBC9000XLT and I've got a couple of things I'd like to see
added:

5. Channel step frequency should be enterable thru key pad rather than the
4 preset steps.
6. A channel no should be able to be assigned to the step, like when in the
cell band you would enter the base freq 870.030 as channel 1 and offset
of 30KHz and when the dial is turned it increments a channel by 30KHz and
the channel no tracks the frequency, ditto with searches.

7. A button to switch to a programmble + or - offset for use with repeaters
cell band etc work when you want to listen to the reverse channel.

8. Any channel should be able to be assigned as a priority channel not just 1
channel per bank.

9. A demodulator output.

10.Switchable filter's for the NFM mode ie 15KHz, 20KHz, 30KHz, real useful
when working with direct carrier modulated digital telemetry, 15KHz is too
narrow but the WFM mode is too wide.

11.More memories, 500 ain't enough.

12.Signal strength meter for cryin out loud, where is it. Even a digital one
on the dot matrix LCD would have been better than nothing, the H8/338
micro inside has 8 A/D channel's I'm sure 1 could be free, althou a
small analog meter would be better.

Some of these would be just a Eprom upgade, how about it Uniden.

I'm seriously considering buying a handheld scanner sometime soon. I'm looking for the basic bands plus 800MHz and 200 channels.

I was looking at Radio Shack and saw the Pro-51 on sale for $199. Does anyone have any experience with this model? Would it be a pretty good choice? How's the reception with the rubber "duckie" antenna? (I have an outdoor antenna, but I'll probably take it in the car some.) I'd appreciate any comments you may have.

Also, I've discovered a BearCat 220XLT from Tucker Electronics for $249. It appears to be about the same as far as covereage, etc. Any experience with this one?

Thanks for any help you can pass along. I'm looking to spend about $250 max.

Jim

>AM/FM.... So you can use your scanner only if it can only recieve vhf?

They probably mean the AM/FM public RADIO frequencies. FM as we usually
mean it uses VHF, although the only frequencies used to broadcast are
between 87.5 MHz and 108.0 MHz. Most scanners (at least my Uniden
BC220xlt) don't receive this part of the spectrum. They jump from the 6
meter Ham band (50.0 - 54.0 MHz) to the aircraft band (108.0 - 137.0 MHz).
So you probably have a VHF receiver without the "standard AM/FM"
frequencies. Can anyone confirm this?

FWIW, TDK once made a 180-minute cassette. I have one. The tape is so thin
you can literally see through it. I wouldn't trust it for anything
critical.

In article <1996Jan28.042057.5075@ke4zv.atl.ga.us>, gary@ke4zv.atl.ga.us (Gary Coffman) writes:

>It's true that amateurs do a
>bit of public service communications, and on occasion a smidgen
>of emergency communications, but for the most part that's a thing
>of the past. k

For once, I actually THOUGHT about someone's comments for quite a while before responding. It's been my impression for some years now that Gary's postings are well thought-out, intelligent, and almost always make valid points. Indeed, there are many valid points in his most recent posting, referenced in part above. I'm especially in agreement with his inference about the automated stations on HF being a prime example of excellence, insofar as their unfailing ability to exhibit patience and accuracy.

But I don't believe Gary has a good overall picture of the AMOUNT of public service that radio amateurs continue to crank out on a daily basis. And that belief of mine is based on two things:

1. The fairly large number of people I continue to come in contact with (bumped into one just yesterday) whose total and complete amateur radio lives (the term "get a life" may well apply here!) revolve around the quantity and quality of service to the public that they can perform by way of their Amateur Radio Service transmissions.

2. My ongoing understanding that there continues to be remarkably large numbers of people who are in fact well served by the 24 hour a day automated PACSATs and HF digital BBSs/MBOs that spew forth accurate and reasonably prompt amounts of third party traffic. These are very often people on board U.S. Naval vessels around the world -- who are not allowed access to naval communications circuits for the type of stuff WE normally handle -- people on commercial vessels and people on training vessels.

There are most certainly many many other situations that involve the handling of messages for the public as a SERVICE to that public, and which thus qualifies for the topic at hand. I know of SYSOPS who bellyache constantly that their systems are "clogged up" by such "trash", which usually makes me wonder what they think would be of greater value...

In any event, I don't believe that relegating public service communications to the category of "a thing of the past" is fair or accurate. Oh, it's more fair and more accurate than even a few years ago, and most CERTAINLY more fair and more accurate than 10 to 20 years ago. And those of you that know me know precisely who I blame for THAT

travesty.

I just brought a Uniden BC-9000XLT. Seems pretty nice, but I wish:

1. Computer control capability.
2. Priority channel selection for any 10 channels, not just one channel from each of the first 10 banks, with control to turn on any number of the priority channels, and not just all 10 (I currently lock-out some channels when I select the priority mode).
3. Signal Strength Meter.
4. The display is nice, but at any great angle it washes-out.

Sincerely,

Cliff Stanley

Looks like you have an axe to grind with RS. Why not take your complaint
to one of the powers that wannabe directly? No, I'm not a supporter of
theirs. Every RS that I've gone into in Massachusetts is lacking in
knowledgeable sales support. That's common elsewhere, judging by the RS
flaming that flares up around here occasionally.

I do not believe that such a tape is available. Even if it were I would not recomend its use. I try to stay away from anything longer than a 90 minute tape. Longer tapes tend to be manufactured from thinner tape stock, and tend to provide less quality, and many more problems (they tear easily, they don't hold up to much rew/ff use as the tension provides too much stress, etc..)

Good luck,

Rich

I've learned over the years of scanning that the best radio isn't any
good without a decent antennae. I've used a telescoping antennae on my
Pro 39 and the difference between it and a rubber ducky were remarkable
especially for cordless telephones. I recommend a good base antennae for
best reception.

I just bought this book it's good BUT>>>
They did not put in BUFF freq for Boston, NY or other areas. Some have it
others don't.
Also, in the NYPD deployment they said something replaces something else.
that's like telling someone a 1080 replaces a code 17. What is a code 17
or a 1080.
Overall, it's pretty informative.

I tend to agree. However if your application is low bandwidth (like voice)
you can buy a slow-speed recorder that puts 3 hrs on each side of
a 90 minute cassette. Marketed for talk radio fans. Sorry I don't
have the details, but it shouldn't be hard to find- just call your
local talk-radio station.

Speed control varies with model. Some use a pot while others have a
mechanical control inside the motor (but perhaps accessible). However,
equalization will be incorrect so changing by a large amount may result
in poor quality sound.

> 2. use an old (extra) vcr; use the audio in/out (RCA jacks) and record off
> the aux channel (line in or what-ever the manafucatur calls those

> vhs

If you use a HiFi VCR, the audio quality will be nearly that of a CD.
Only caution is that some VCRs require a video signal to maintain stable
speed lock - just use your own audio.

>
>thanx
> Jim

The whole world will tell you that it is your coax. For 800-900 MHz, RG59 will be lossy. So there is a good chance that is the part of your problem, but you never know.

You said the coax is good. How did you check it? You said you grounded your antenna. How did you ground it? Your sure you didn't short it to ground?

My big question is about your selection of coax and a suggestion I saw in another reply. Why are you using 75 ohm cable? The only scanner I have ever owned has a 50 ohm antenna connection - I assume that most do. If your system is supposed to use 50 ohm feed line you should never have even considered RG-59. (RG-58 is 50/52 ohm cable) Another person suggested that you use RG-6, why? (RG-6 is 75 ohm coax - RG-8 is 50/52 ohm) The longer the run, the more loss you will suffer with mismatched feed line - more than than what you would expect from the distance alone. So 40 feet on light coax is probably not a good idea for UHF...but the impedance mismatch is probably compounding your problem.

Now if the PRO-51 and your discone are 75 ohm systems (Since I don't use either, I don't know) you are on the right track with 75 ohm cable.

Have fun.

: Simple. At these frequencies, the signal gets completely eaten up by
: the coax. You would probably get better reception with a paper clip than
: with the discone.

That doesn't make sense to me cuz i'm using an old TV antenna on my roof
with about 50 ft of coax and i get a LOT more stations than the
telescoping antenna it came with.

>Brian

assumption that you record and play back on the same machine:

1. you could modify a cassette deck slowing down the tape speed (usually a
pot adjustment inside deck) but this reduces the audio bandwith

2. use an old (extra) vcr; use the audio in/out (RCA jacks) and record off
the aux channel (line in or what-ever the manafucatur calls those
inputs) you can get 6 or 8 hours depending on what tape you buy. 120/160

I am an avid scanner hobbyist and was wondering if anyone on this newsgroup is like I am not at all satisfied with Radio Shack. I must say that they used to be a good knowledgable group of stores where someone could go and get advice and help (there still are some such stores but they are hard to find one great store near me is in the Swansea Mall in MA it is excellent). The salemen are 9 times out of 10 don't know what the hell their talking about all they want to do is sell you the product. I really am disapointed with the RS stores especially the one near me in Seekonk, MA on Route 6 it is a perfect example of what I am talking about.
I know that RADIO SHACK management reads this list so if you are like me and not satisfied let them know by responding to my post.

Maybe we can change the way the company is heading which I fear is down the tubes as far as our hobby is concerned.

Steve

Wrong again. Modification of CB radios is legal, but it invalidates
the type acceptance of the radio making it illegal to *use* it once
modified on the Citizen's Band.

> SteveYa I gotta agree with the concencus here. I have found RS
stores becomming less and less helpful over the years. When I go into
one I know up front that I had better know what I am looking for because
the sales people are no help @ all. Most don't know a 4ohm input from an
8ohm. Time used to be when you could get good reliable info from them
but not anymore. I think when the cb craze died out so did the guys who
had any interest in the radio-hobby. I think we need to remember one
thing. Radio Shack is a retail store and as such they frequently hire
anyone who can pass the drug test. Knowledge costs money and money
eroades profits so bear that in mind when complaining. Besides if it
wasn't for RS stores where would you go to purchase antennas, connectors
and the like ??????. Eric Huber.

Yeah, what is it with being asked for your phone number anyway? I can go into the same store everyday and they would still ask for my phone number. No other store sees a need for my phone number just because I am buying something. Whenever they ask me for my number or address I just tell them that I am already on the mailing list. That seems to satisfy them.

> --- Judy May hq124@cleveland.freenet.eduHi Judy, Sounds as though you have a bum BC9000.
I have basiclly the
identical setup here in Baltimore. I live about 15-20 miles outside of
the city and my BC9 is connected to a Radio Shack discone antenna up in
my attic. Maybe I'am lucky or something but mine is flawless it's the
best scanner I have ever owned. Something to try, if you know anyone
else with another scanner connect their's to your antenna and see how it
does. If this scanner has the same problems then it's most likly the
feed line. If not then it's the scanner. I have never heard of the
excuse about the receiver becomming unsensitive due to signal input.
Just wondering if the person who told you this also sold you the radio.
Good Luck, Good Listening. Eric Huber.

I'm sure this question's been asked before...I'm also sure I already know the answer, but I'm going to give it a shot. :)

Being CAP/MARS Communicator licensed (which I am), is there a way to modify the HTX-202 for out of 2-meter band operation? It seems like there's this pattern that you can only modify radios to transmit on frequencies they receive, and since the HTX-202 won't receive anywhere outside the 2-meter band, it won't work, but hey...

From: brk@email.unc.edu
Message-ID: <4eh5aq$16ml@bigblue.oit.unc.edu>
Source record: 241229

I have a Uniden BCT-2 "BearTracker" for sale. This is the unit
that scans the HighwayPatrol frequencies and alerts you to any unit with in
three miles of your car. It picks up a repeater in their car, so they
don't have to be using radar. It also scans local police, Weather
channels, and Department of Transportation. All you do is set the state
you are in, and it knows the right frequencies to load. It has a waring
light that blinks when it finds a HWP unit as well as a beeping noise.
It sells for over $200, but since this one is about 4 months old,
I will sell it for $100 plus shipping. This is a great unit, but I just
got a new company car and am not allowed to mount anything in it.
Anyway, if you have any questions, or want to make an offer please
let me know. This is a great addition to radar detectors. Especially
with the new "Instant On." Thanks

Bryson Koehler

Jim, forget all of the junk Radar Detectors that you are talking about and
look at the Cinncinati Microvave units. They may be a little more

expensive but there is an old saying that says "you get what you pay for".
I have found their products to be excellent having messed around with
"Whistler" and most of the others around. Take this for what its worth
and from past experience.

Help, I need some frequencies for Southeatern Masachusetts.. specifically New Bedford/North Dartmouth areas.

Feel free to email me at mgrph@tiac.net with responses.

Thanks In Advance.

>you are correct. Maybe someone wiser than I can help us out here.

You are hearing images of cell phone base stations. The first
IF in the AOR AR8000 is (approximately) 275.45 MHz or 736.25 MHz,
depending on the band being tuned.

Add or subtract twice the IF from the frequency to which
you were tuned:

1430 - 2 * IF
= 1430 - 2 * 275.45
= 1430 - 550.9
= 879.1 MHz, which is in the band used by cell phone base
transmitters

When your AR8000 is set to 1430 MHz, the 1st local oscillator
is generating a signal near 1154.55 MHz. The two signals mix
to produce the IF of 275.45 MHz.

At the same time, a cell phone base transmitting on or
near 879.1 MHz also mixes with the AR8000's 1154.55 local
oscillator, and the difference is also 275.45 MHz, the IF.

darwin@iquest.net (Darwin Teague) wrote:

>I use my tv antenna for ....tv! I'd like to add a rotator and also use
>it for scanning. Would it be better to use it horizontally or
>vertically? Which would be more forgiving of the loss of signal
>strength?

Well, signals of interest to the scannist are almost always vertically polarized. TV signals are horizontally polarized. There can be as much as 25-dB difference in signal strength between the vertical and horizontal planes. 25-dB is a ratio of 316 to 1. That means any gain advantages of the directional beam can be nullified and the situation made worse if the antenna is in the "wrong" plane with respect to the signal.

The deadly serious scannist who wants to use a single TV antenna for both TV and scanners, will have a rotator for azimuth as normal, but also another rotator on the back end of the boom so as to rotate the antenna 90-degrees from "flat" or horizontal for TV to vertical for scanner signals. Convolted, yes, but definitely "doable". In fact, something to this effect is done commercially here and there.

>Also, would the directional aspect of such an antenna more pronounced
>when the antenna is vertical or horizontal? (which way is the beamwidth
>narrower?)

That would vary from one antenna to the next and really can't be speculated. I *think* the beamwidth is pretty narrow in both planes for most TV antennas, though.

>Thanks, Bill for all of your help here.

Glad to help. Not many scannists can afford the cost or space to erect a log-periodic, and in many instances, a TV antenna is not only feasible, but possibly better..... so it's an idea always worth consideration, and I am pleased to share it.

Rgds,

Bill

>I have a CLP5130-2 antenna, and find it adequate, but not exceptional
>in performance.

That's the thing about log-periodics...."performance" in terms of gain and F/B ratio is always sacrificed for the several octaves of bandwidth afforded. Goes hand in hand, so it's NOT a fault. It's inherent in the design. Still 8-dBi of gain and a 20-25 dB F/B ratio are heads and shoulders over the discone with 0-dBi (or worse) and 0 dB of F/B.

> Its main attributes are that it is built to
>withstand the wind and weather, and it is well engineered.

Well said. Add to that the relatively "flat" performance of a log periodic over its designed bandwidth.

Why would you say a stupid thing like that? I don't mess with anyone's affairs other than my own. Once in a while I may offer to help out....and if the offer is accepted, I do my best; if rejected, then fine and dandy. It need never go beyond that. But you? I offered you a hand, and you plumb messed your britches and let it run down your leg and out into the open..... shooooooeeeey! You were rude and crude, dude.

> I use scanners, repair them, and write articles also, and not just under my
>name or handle, but I do it as a hobby, not a lifeline.

You NEED to do it as a hobby. You CAN'T do it as a lifeline. Just reading the message you posted here makes one wonder if English is not your native language. Nevertheless, there is nothing wrong with doing something for either a hobby or a lifeline, is there? Correct me if I am wrong, but you do electrician work for a lifeline, right? Is THAT wrong? What if hobbyist electricians called you all sorts of names because you were in the electrician business?

> I've gave away more than you've sold,

Geezus, dude, get real. You've given away exactly what it was worth. I'd like to see YOU write books and then give them away! I'd like to see YOU produce a quality newsletter, and spend the majority of your day on it, and then GIVE it away.

> wasn't in the hobby to get rich.

Who is?

> That's why I ran the AOSC on a low budget, the same for the
> 2004 Newsletter. I wasn't purty' but it got the job done.

It wasn't pretty, but it did not get the job done in a manner as to be useful to a large number of people of diverse backgrounds and capabilities.

> I didn't get many complaints,

Very few people "look a gift horse in the mouth". I don't get many complaints, either. But when I do, some are justified and some are not. So what? I'll bet your electrician work gets a healthy round of

complaints along the same lines....some valid, and some not. So what?

If you and me set up shop to give away $10 bills, we'd not get any complaints, unless from those who didn't get any. So what?

> but I remember yours....do this, do that. I didn't give up the race, wasn't in >one, just trying to keep the hobby alive with out gouging eveyone. >Shucks, that's why I kept the dues in a coffee can...

Ummm hummm, and where are those "dues" now? And where is your knowledge of scanners and computers and graphic arts and use of the English language in written form?

And why the innuendo about "gouging"? There is no "gouging" by me. I expect people to pay the freight, though, commensurate with the quality and the quantity of what they want. You want to GIVE something away, that's fine.....do it! But I sure don't see you here giving anything away; answering questions; telling people the in-depth side of what they might want to know.

Sure, you GIVE it away here and there, Jerry old boy, old pal, old chop, but it ain't worth anything either, except on a spot basis where someone may need a word or two as a catalyst to trigger or inspire them on to whatever they wanted to do. That is the way of life. That's not a putdown. Not like you're trying to do to me. But you sure as tootin don't *DO* anything of great worth and then give it away. You can't afford to. No one can.....

Hell, I GIVE advice, suggestions, tech support, and a lot more, and I'll match it with yours any day and let the cards speak for themselves. But it is not a terrible thing that I spend WEEKS or even months writing something based on previous WEEKS or months of research and development, and then want to be compensated for the effort. I'm sure as heck not going to spend thousands on a process and then give it away.....and you don't either!

And a hell of a lot of what you call "gouging" goes right back in the "coffee can" to create even better products and capabilities. You wouldn't know anything about that, though.

Methinks you don't wire people's homes and businesses for FREE. Or whatever you do for a living....you sure don't do it for FREE. And you don't do scanners for a living because you CAN'T. And you don't write for a living because you CAN'T. And you don't run the All Ohio Scanner Club on a shoestring anymore because you CAN'T. You lost it because you don't have managerial and fiscal capabilities.

Some things can be run on a shoestring; but where a LOT of people are involved, and where demands increase on one's time and resources, then there has to be a budget, and people have to pay their way.

Now you get your ass to work and I will GIVE you free publicity. You just start a venture again to run me out of business....and I will

HELP you! And no strings attached! You start another newsletter and I will publish the release you give me.....without any evaluation or judgment of my own. So come on, Jerry, old boy, old chop...put your money where your mouth is......and shit or get off the pot.

Yours,

Bill

> somebody without reason.

I got hauled into a court in the Phillipines in the late 60's. Four
guys charged me with the misdemeanor offense of assault, battery , and
of all things, "picking on them". The judge and both attorneys were
not very serious at all. I didn't know what to make of it being in
court in a strange country. I was mostly scared shitless, after being
in the local slammer overnight.

The judge asked for their side of the story first. One by one, they
told how they walked up to me and asked if they could have my watch
and some money, whereupon I went berserk and beat the snot out of
them. Everyone stifled giggles and smirks when the judge asked 'em if
I had a weapon and they responded, yes -- my feet and fists. The
judge's jaw dropped wide open and he said, "That's all?"

Then I was asked for my side of the story and by that time, there
wasn't a serious face in the room. I doubt anyone heard me state how
they'd come up to me with billyclubs, demanding my wallet and
wristwatch and how I, fresh from Vietnam, went into full out assault
until the threat was over.

The judge interrupted me at some point and said, "Get these guys outa
here, one man does not pick trouble with four other men. But if he
did, HE should be the one on crutches and bandaged up."

That was one of the few cases of perfect justice I've ever seen. But
it is illustrative of that thing about me that I don't bother anyone
first. I learned that in the 8th grade when after weeks of me picking
on a dumb ol' country bumpkin, he turned on me one day and beat the

snot out of me in front of girls and everyone. I was utterly embarrassed..... but an old grandma type in the neighborhood took me home; washed my face; made me some soup and used that situation as an example of how easy it is to lose when you're wrong and the other guy is right. She said to leave people the hell alone until they came looking for a fight, and then give 'em "billy thunder". I don't remember the gal's name, but she sure impressed me. I still use "Billy Thunder" to this day as an occasional CB handle. But her and that country hick sure made me sit up and think.......

And it's a fact, if people would just mind their own business and leave others to mind theirs, there couldn't possibly be any serious trouble in this world. But hell no! It's always some snotball that wants what's on your dinner plate in addition to his own. Sheesh!

Bill

2447. How Do They Do it Bill?

Greetings Bill,

Question for you. I've seen ads in the last couple of issues of Popular Communications where Cellular Security Group offers 800MHZ mods for some late model scanners. Ones that are not suppose to be easily modifiable, like the BC-3000XLT and 9000XLT scanners. Do you have any info on how they're accomplishing this? I tend to believe that it's a cpu or entire board swap with a European version, but I don't know, do you?

If it's something more complicated than a diode cut, resistor cut ect I would think it would cost more than the typical $40.00 they charge for the feat. What do you think?

It is really difficult to read this without falling on the floor laughing.
You call Bill a liar and then you post the above trash. I can't believe
a person can be such an ass to post such a hypocritical spew of BS.
Of course your daily summary of Bills post didn't prolong anything did it?
Of course the fact that Mr. Moss instigated the whole things seems to have
slipped past your feeble pea brain. Of course your lie 2 weeks ago that
you weren't going to respond anymore on the subject seems to have left your
cranus. You really are a classic. You talk the talk but that is where it
ends. The PjB Eveready Energizer Hypocrite speaks again and again and again.
Pull your head out and get some fresh air. You obviously are suffering from
methane overdose.

The alien radio frequency list is a classified document. Using superior light speed technology your scanner can not intercept these frequencies. However to prevent interfernce by alien abduction teams with the NSA monitoring capabilities a national frequency has been assigned. It is 148.150.
This frequency has been officially assigned to the Creatures from Alien Planets (CAP) Using code names such as Red robin and the like these creatures coordinate their activities for kidnapping New Age groupies, children and their sex rituals with American cows.
It can be very interesting and hope you can tune in sometime.

so, is george completely clueless or just waking up from, say, 1985?

>Face it, nobody really builds their own radios any more. Look in

not true, the stuff people build has changed. also you don't HAVE to build equipment unless you want to - it's always interesting to see people pine for the "good old days of amateur radio when there were lots of US amateur radio manufacturers" very few of which were actually investing in R&D...and so got caught leaning off base with the combination of rules changes the availability of transceivers in compact form (such as the FT-101, TS-520) and the advent of 800 numbers.

>the ham radio magazines and what do you see? Answer: mega-
>dollar ham radios.

your $2K today buys one heckuva lot more radio than it could 20 years ago. i don't think there's anywhere near as much improvement in the CB side, but then again, if there were changes, you wouldn't have those $100 CBs at radio shack..

>Ironically, these ham radio operators have been so damn pig-headed
>that the numbers of operators are in the decline and many of these

definitely clueless. he doesn't know about the roughly 150,000 new folks from 1991 on...or the recent licensing changes.

Friends,

I am offering a full function stand alone IBM compatible Broadcast Radio Station Database to anyone who is interested. The program contains at least 4,000 records now and is capable of of accepting an indefinite number of entries. It is read - write and can be edit and updated.

That records can be sorted by station name, frequencies, schedules, languages, countries, and continents.

If you are interested, send you POSTAL MAILING ADDRESS for REGISTRATION, along with your name and EMAIL address to me at chuck@flinet.com.

I will send the Program back to you via EMAIL. Please send your request to my EMAIL address.

This is a FREE offer!

Hope to hear from you.

Chuck

I no longer have a PRO20006, but as I recall, the diodes are on the back
of the front panel. With the top off, and the unit facing you, the two
diodes are in the upper right handd corner.Snip one "leg" off rather than
removing the entire diode, to give you the option of reconnecting it
someday, perhaps for warranty repair work....

==========

John,
I've been using Viking's recorder for about two years now. Its
been very reliable and stable. I use it to record data from weather
sats for later analysis. The only "odd" thing I do is try to avoid
using fast fwd and rev, to minimize tape stretching.

Rolf

2468. RS discone problems with CELLULAR!!!!!

Newsgroup: rec.radio.scanner
Date: 1996-01-29 00:00:00 UTC
From: magicjlass@aol.com
Message-ID: <4eii1d$ecj@newsbf02.news.aol.com>
Source record: 241265

Just recently I bought the RS discone from my local RS. After I put it on my roof top off of my chimney I tried scanning celullar. I got barely nothing (as compared to with the rubber duckie the duckie was 100 times better). I am using RG59 (40ft) and a Pro-51, the antenna is grounded, the RG59 is good (no power lines near it either).
To make another twist to the subject when I scan cellular and unscrew the PL259 connecter from the So39 to BNC connecter and just leave the pin of the PL259 connecter in the So39 to BNC connecter cellular is almost as good as the rubber duck.

If any one has any Ideas as to why I shouldn't recieve better reception from an RS discone than a tipical rubber duck, PLEASE LET ME KNOW!

thanx
Jim

>If any one has any Ideas as to why I shouldn't recieve better reception
>from an RS discone than a tipical rubber duck, PLEASE LET ME KNOW!

Simple. At these frequencies, the signal gets completely eaten up by
the coax. You would probably get better reception with a paper clip than
with the discone.

2470. BC9000 de-sensitizing or bad antenna?

Newsgroup: rec.radio.scanner
Date: 1996-01-29 00:00:00 UTC
From: hq124@cleveland.Freenet.Edu
Message-ID: <4eikd8$8fb@madeline.INS.CWRU.Edu>
Source record: 241267

I have a BC9000XLT that works GREAT with the little whip antenna it
came with. I have no problem pulling in very clear signals from the
suburbs where I live up to 15 miles away. To extend my range, I purchased
a highly recommended scanner antenna from a well known national dealer.
To test the antenna, I took my radio up to the third floor, and connected
it with just six feet of top quality, low-loss coax with new connectors and
no adapters. The antenna is rated 30 MHz - 900 MHz.

I made comparisons by alternating between the antennas on each of the
bands: 46 MHz, 155 MHz, 460 MHz, and 855 MHz. I rotated the new
antenna through several positions to rule out directionality. Although the
new antenna could receive the usual local signals just fine, in every
instance the little whip antenna beat out the new one by catching faint
signals that the other missed totally (even with the squelch all the way
down).

The dealer recommended I return the antenna for a refund. They felt
the problem was caused by so many strong signals in my area making my
receiver "de-sensitize", as opposed to the antenna or balun being
defective. Is this really a likely explanation? If so, is there anything
I can do to receive fainter signals as well as the strong local signals?

Thanks...

Your problems with your antenna arent the antennas fault,it the coax!Change that JUNK to RG-6(TV coax)and you will hear lots of 800 mhz stuff.You are losing most of the signal due to loss of the coax.You should notice an improvement on 400 megs too.Radio shack has all the cable\connectors you will need.If you haven't ever put the ends on before,Buy the "heavy duty"crimper they sell,it's cheap if you use it once in a while...Bumologist..

Yes, I agree, when you consider the carrot antenna that comes with it. Grove
sells better scanner antennas. I got a Diamond RH77CA 8-bander and it works
great. Although I will say, so far the best antenna I have for the low VHF band
is the Radio Shack telescoping antenna with the load in the center of the
antenna. Works the best of the antennas I have for that band. Not too expensive
either, but not too good on UHF and above.

>
> 2. This birdie problem has really got me concerned. Are there any real
> remedies for this yet?

I have not experienced it, but the Dec/Jan issue of US Scanner News has a good
article about that. They recommend getting replacing the ceramic CPU clock
resonator with a crystal one. Best bet is to get the article from US Scanner
(the mag $2.50 per issue). 503-203-8620.

The issue also has an interesting article on the AR8000 band plan.

The following info came out a long time ago....

>In the August 1992 issue of Monitoring Times, Bill Cheek discusses a
>data tone squelch circuit for the Pro-2004/5/6 series. The circuit is
>designed to *ignore* obnoxious tones and data, such as trunked radio
>and cellular data channels. However, he states, "It takes a steady
>5-volts for about one second to trigger the SCAN/SEARCH RESUME
>function..." My question; is the 1 second resume time peculiar to the
>2004/5/6 series? I like the simple approach of the circuit to force
>scanning on constant, high level audios, but the 1 second resume

I did this mod several years ago but now that Bill is on the net, I'd
like to ask some questions.

This mod seems to work fine when the pro2006 is in scan mode and comes
across a *stable* data signal. Pager signals are somewhat harder for
the unit to "skip" over. On some signals, such as the GE 800 trunk
tones, the mod doesn't work, probably due to the changing signal. One
other thing that is peculiar, is that if the unit does stop on a data
signal, it takes about 5 seconds to resume scanning, not one second. I
verified this with data signals the unit normally skips over, by
turning the data tone squelch (DTS) off until I was on the data
signal. After turning the DTS back on, it was about 5 seconds to
resume vs. the normal one second it takes when DTS is already on.

Bill, have you added any revisions to this mod to make it work better?

Thanks,

the author. Free distribution is encouraged.] |

Abstract |

This article contains product review summaries for dozens |
of old and new scanner radios and monitor receivers. Other |
topics include: |

1. Motivation for buying a used scanner |
2. A used scanner may be a broken scanner - where to get |
it fixed |
3. Evolution of the scanner |
4. Obtaining crystals |
5. Keyboard programmable scanners |

Introduction |

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 110 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other
radio hobbyists. This article describes a few of the FM
receivers in my collection, and is not meant to be
complete.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had
sellers look me square in the eye and tell me their radio

worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Several people have been pleased with Electronic Repair Center, in Franklin Park, IL, which repairs scanners for a flat fee. Call them at (708)455-5105 to find out their current rates. G & G Communications (telephone 716-768-8151) is another scanner repair company. This family owned company repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by | multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series. Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Bearcat BC-101, Radio Shack COMP 100, and Tennelec MCP-1, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. The SBE Optiscan (and its Sears clone) required poking a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

Radio Shack scanners contain a reasonable number of features. All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making

scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. A few years ago, the Regency and Bearcat scanner lines were purchased by Uniden, a Japanese company, and production was moved to Asia.

My favorite VHF/UHF receivers are the 400 channel Radio Shack PRO-2005 and PRO-2006, the Uniden/Bearcat BC9000XLT, and the ICOM R7000 and R7100. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the Radio Shack PRO-43 and Uniden/Bearcat BC3000XLT.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews of these recent scanner models in Monitoring Times magazine:

Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042 |

Note: Reprints of Monitoring Times articles are available for $2.00 each from Grove Enterprises, PO Box 98, Brasstown, NC 28902, tel. (800)438-8155.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest.

ICOM

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies

serenades the Icom user with a very annoying clickety-clack, clickety-clack!

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized

service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is

awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report,"

by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz first IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. | Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One | urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. See "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and

delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable

portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner | for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO- | 2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although there is no mobile mounting bracket available and the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 | but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor | dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-

2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. Broader IF | selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The | Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring | Times, February 1996.

PRO-34: Portable scanner with 200 channels and 800 MHz | coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, | LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but | includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. | 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional

CTCSS board. Dual conversion with 10.8 MHz first IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base | scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. | Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or | provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 | FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard | makes the PRO-2003 hard to operate unless in a well lit | room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage

fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 | channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning.

PRO-26: 1985 vintage. Very good portable made by for Radio | Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. Audio suffers from small speaker.

PRO-62: 1984 vintage. Good portable 200 channel scanner | using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal | controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical

Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar:

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock-outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2526	10	X		yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. | Better image rejection than most scanners (see article by | Bob Parnass in Monitoring Times, January 1996 for | comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split"

models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For | more information, see "Add a Cystal Receiver to Your | Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA. It
tells where you can buy your first scanner, what features
it should have, where to get it repaired if required, how
to get frequency information, and mentions a few scanner
clubs worth joining.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,
taxis, and buses are all equipped with radios and you can
listen to them. You can monitor the local sheriff and fire
departments to hear about events "as they happen," before
the news reporters hear about them. Hostage dramas, bank
robberies, car crashes, chemical spills, neighbor and
domestic disputes, tornado sightings are all fair game. In
a single afternoon, you can hear a high speed police chase,
Drug Enforcement agents on a sting operation, and
undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss
strategy with his advisor from a 415 MHz radiophone in Air
Force 1, or a team of G-men protect him while transmitting
in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you
can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. A new law outlaws listening to cordless phones, too, but many scanners cover these frequencies, and it's clear that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is now illegal for companies to sell recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, PO Box 98, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner:

1. has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. The lowest cost programmables can't search.
2. covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 40 channel radio will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly

reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the Uniden/Bearcat BC760XLT (a/k/a 950XLT) and discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, and Radio Shack PRO-43 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The new Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-62 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer to replace the stock antenna with an Icom FA-1433B dual band flex antenna which is thin and very flexible while providing better performance than a stock antenna.

Although it is small and somewhat tolerant of physical abuse, the range of a heliflex antenna is very limited. Augmenting it with a 19" telescoping metal antenna can improve portable reception greatly.

Since 1988, I've used the "Thin-Stick" 18 inch telescoping antenna for extended range on my portable scanners and 2 meter walkie-talkies. The Thin-Stick, made in USA by Smiley Antenna Co., Inc., is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend

reliable reception to 100 miles or more. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Discount chain stores like Wal-Mart, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 300 S. Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155.

- National Tower Company, PO Box 15417, Shawnee Mission, KS 66215. Telephone (913)888-8864.

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411.

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

KD4MOJ maintains a scanner modification server for people without FTP access. You can request a list of scanner modifications by sending electronic mail with the words GET INDEX.TXT to FTPmail@exchange.tlh.fl.us

If you cannot find files describing modifications to a particular scanner, it's probably because nobody bothered to devise a modification, or more likely, nobody has taken the time to document their modification.

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here are least two

companies which repair scanners:

1. Electronic Repair Centers (telephone 708-455-5105) - Several people have been pleased with good repair service from Electronic Repair Centers in Franklin Park, Illinois. Although they are not authorized to perform warranty work, this outfit has been repairing Bearcat scanners for several years. They charge a flat rate of fixing scanners, and shipping is extra. Electronic Repair Centers will fix Regency scanners if they can obtain the parts.

2. G & G Communications (telephone 716-768-8151) - This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The 1996 editions contain selected business listings, too, although callsigns are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A new, 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees,

listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning Report is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about

$100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, and organizations across the country, I will locate FCC licensed and selected FAA transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall

security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an

outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

The world's largest scanner club is the Radio Communications Monitoring Association (RCMA). Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are $27.00 per year, which includes the monthly Scanner Journal, approximately 50 pages in 8-1/2" x 11" format. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz. The RCMA web page is at http://comp.uark.edu/~plaws/rcma/. The RCMA electronic mail address is RCMAHQ@GEnie.com.

Inquiries about RCMA membership should be sent to RCMA General Manager, P.O. Box 542, Silverado, CA 92676, USA.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. A one year subscription is available by mailing a $15 check, payable to Kim Moran, to:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (708)852-1292.

All meetings are held on Saturdays at locations announced in advance. The next meeting is February 10 at the Destiny Restaurant in Des Plaines, IL.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

I am often asked, "How do you find these frequencies?"
Scanner enthusiasts can obtain frequency information from
several sources, including books, government microfiche
records, or other listeners.

Books

The most convenient source of fire and police frequencies
is the Police Call, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and
larger book stores for under $13. Police Call is basically
a computer printout of FCC license information in the fire,
police, local government, and conservation services in two
lists: by licensee name within state, and by frequency.
Later editions have included a few pages of local airport
and nonsensitive federal government frequencies. The 1996
edition contains selected business frequencies, too, but
callsigns are listed only for local government and public
safety licensees.

I highly recommend Richard Barnett's 1992 book, Monitor
America, published by Scanner Master Corp. A 3rd edition
is expected soon and will be available from Grove
Enterprises for about $30. This second edition is crammed
full of police, fire, local government, news media, sports,
national park, and commercial broadcast frequencies for all
50 states. The information was compiled mainly from
members of the world's largest scanning club, the Radio
Communications Monitoring Association (RCMA). Monitor
America contains detailed communications system profiles
and precinct maps for major metropolitan areas. Police and
fire radio codes and unit identifiers unique to local

agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns. A 3rd edition is expected in early 1995.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and Kneitel's sensationalistic Popular Communications.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Microfiche is not for the casual hobbyist, but rather for the ardent listener, who can easily spend a few hundred dollars for the fiche, not including the price of a microfiche reader.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead. In the 1995 edition, fields are different than PerCon's Spectrum CDROM. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The new PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. It works in DOS, Windows, and Mac environments.

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, and organizations across the country, I will locate FCC licensed and selected FAA transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM central time. For a brochure, send SASE.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA)1. Only 12 of the 21 information

fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'2.

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA).

Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are collected annually, which covers a monthly newsletter, the RCMA Scanner Journal, about 50 pages long. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz. A recent liberalization of club policy now permits the printing of most federal law enforcement frequencies, e.g., Secret Service, FBI, Customs, and DEA. The RCMA electronic mail address is RCMAHQ@GEnie.com.

Inquiries about RCMA membership should be sent to:

RCMA General Manager
P.O. Box 542
Silverado, CA 92676
USA

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto

terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s]

missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

2480. Does anyone know business freq "green dot" etc?

Newsgroup: rec.radio.scanner
Date: 1996-01-29 00:00:00 UTC
From: myoung@UMDNJ.edu
Message-ID: <myoung-2801962318020001@rwj-cs-slip06.umdnj.edu>
Source record: 241277

I am curious as to the designations of business radio frequencies as colors, for example: "green dot", "blue dot", "purple dot", or " red dot". I have found out that "green dot" is 154.600 Mhz and "blue dot is 154.570 Mhz. I understand the above are VHF and there exist several UHF named frequncies as well: "yellow" "brown", "J", "K", "blue star", "gold star", "red star", and "silver star". It is reported that "yellow" is 464.550 Mhz.

Does anyone know the other frequencies? If so please post them or email your response to me at: myoung@UMDNJ.edu

Thanks,
Mark

>to purchase it? Any comments posted to this newsgroup or personally
>would be appreciated.
>
>Tim.
I've had the PRO-60 since it was released. I like it very much, it
does a great job for aircraft & military aircraft (being a pilot, thats
what I listen to mostly). For the standard police & fire stuff it does
a great job too. I like the audio better out of the PRO-60 then some
of the older R/S scanners. Two disadvanages are 1) it draws alot of
power, the nicads don't last as long as other handheld scanners. and
2) No mods for Cell!
One other thing I've noticed about the PRO-60 and maybe someone else
could help us out is that the CPU seems to be slow at times. I mean
when I hit the manual button a few times to step through a few
frequencies, the display seems to get about 2seconds behind me, then
all of a sudden it catches up. Doesn't do it all the time, just once
in a while (like twice or 3 times a week for me). This problem has
never effected the preformance one bit. Its a great scanner and I do
like mine.
George

Source record: 241280

Hello,

Thank you to all those who have made use of my WWW home page. Your support and encouragement is very much appreciated.

Since its launch, I have made numerous improvements and I would like to announce that you can now download ms-windows versions of the four working aids as follows:

Foreign Language Recognition: language.zip (about 55kb)
International Bandplan: bandplan.zip (about 54kb)
Modulation: modulate.zip (about 78kb)
Propagation: prop.zip (about 65kb)

Each file is zipped to minimise downloading time and can be expanded to a ms-windows help file. All files are compatible with Windows 3.x and Windows 95.

The URL is http://www.ibmpcug.co.uk/~g4sgi/

Comming soon - a demo version of AOR PC-MANAGER for Windows!

Please send me your comments. Enjoy.

Simon

>
>How?

For almost any Motorola pager, the cap code is programmed into the pager and can be changed with service software. We use a self contained Motorola programmer for Bravos and a "RIB", connected to a PC for Advisors and Memo Express units.

So yes they can be changed. But unless you're into building an interface that will talk to the pager and can get hold of some software, you're probably just bettwr off having it changed - but then that would depend on what you are trying to accomplish.

Source record: 241086

In the words of the famous Syms clothing store owners...

"Syms. Where an educated consumer is our best customer."

In other words, and I have found this to be true, DO NOT
go into RS expecting to learn anything. Buy a copy of
the catalog (you get the money back when you buy some-
thing else), and study it if you're interested in some-
thing listed.

Study it hard, and know the equipment you're interested
in, because most of the folks that work there don't have
a clue about what they're selling.

Remember, RS is a business, and as a retail shop, the
salesperson turnover is VERY high. People who DO have a
clue should be making $10.00/hour because they DO increase
sales, and can prevent people from going elsewhere out
of frustration. BUT they don't, of course, as the dif-
ference between $5.00/hr and $10.00/hr equates to $60
in a 12-hour day. Noooo, this difference could NEVER
be made up by having staff who knew the goods, could it???

You betcha it could. And the salespeople might be inclined
to stick around, too. Would you TRAIN someone on the
stock who you KNEW was going to leave in the next 6 mos?

"You've got questions, we've got answers." Sure often the wrong answers.
With advertising like this you would expect some "good" answers when you
go in. Just after Christmas I took back a defective cordless phone. It
took 45 minutes to get it exchanged. First I had to wait for the manager
to come out. Guess what he said when he saw the phone... "Wow!!!" He
didn't even know he had this kind of phone in the store. Then it took him
15 minutes to look through the manual to see how the phone works. Finally
I told him to try another phone to see if it worked, of course it did, so
I get the exchange. What really gets me is they think the customers are so
stupid, "Did you put the battery in right?" but most of the time I know a
hell of a lot more than them.

Why? Because Radio Shack has built a multi-million-dollar advertising campaign to tell me that "YOU'VE GOT QUESTIONS, WE'VE GOT ANSWERS!!" That's why!

If truth-in-advertising laws applied to advertising slogans, it would be more like "You've got questions? Don't ask us! We don't have a clue!"

What I meant was that modifying a CB is illegal if you plan on using it on
the cb band. If you use it for 10m or something in the ham bands then it is not
illegal. What the guy was saying at first that modifying all radios is illegal. It
is not illegal to modify a scanner either but using it to listen to unauthorized
bands, ie cellular, is illegal.

> Come on don't be ridiculous here lawyers and RS employees are two
different things. I don't expect to be treated like a king in an RS store
but I do expect to be treated and catered to like the valuable customer I
am. When I want to see a pro-26 which costs $449.99 before I buy it, I
expect to have that option without an attitude from the salesman.
I am not an irrational person Mr 73...N9NWO but I don't think its
unreasonable to expect a salesman at RS to know some basic information
regarding what he is selling. It has gotten to the point at least in my
area where salesman don't know what the difference between a shortwave and
a scanner or a HAM RADIO and a CB is!.

If Radio Shack's mission is to provide merchandise to hobbyists with unknowledgable people behind the desk fine. But I think they are making a big mistake! Some slight knowledge on the salesman's part goes a long way to making a customer feel confident in the product and buy. If I were you I'd be a bit concerned as a stockholder right now because there are many other new radio frachises opening nationwide which realize the benefit of providing their customers with a little service.

Using the proper transmission line is just as important on receivers as it is on transmitters. It really doesn't matter whether the signal is going from a transmitter to an antenna, or from an antenna to a reciever. The signal gets from one end of the cable to other in the same manner (transverse electromagnetic mode) - the only difference is the signal power.

Using the wrong feed line will cause just as much loss of received signal as it will loss of a transmitted signal at the same frequency.

And when you are dealing with your local Radio Shack (or similar type of store) you should have no trouble finding 50 ohm feed line (RG8 or something else). It should be readily available.

>So 40 feet on light coax is probably not a good idea for UHF...but the
>impedance mismatch is probably compounding your problem.

The impedence mismatch between 50 ohm and 75 ohm is a small factor. A much more important factor is the line loss. Using RG-6 or even better RG-11 works great with a scanner. Unless you want to go with 9913 or hardline it is probably the most cost effective.

The impedence mismatch loss OCCURS AT THE POINT OF MISMATCH NOT thru the entire cable. Considering most antennas are not truly a 50 ohm match except at a specific frequency, using 75 ohm cable is again a minor point of loss.

Quad shielded RG-11 works the best. This cable is commonly used (as is RG-6) to carry the 950-1300 mhz IF used in TVRO (and DBS) satellite systems because it's low loss. The loss at 1000 mhz for 100 feet is ~5.5 db for RG-11 and 7.0 db for RG/6 (common types). Remember there are MANY types of RG-6/8/58/59. They have more or less loss, shielding, is/is not UV proof, and different diameters and all called by the RG number (which really doesn't tell you much but the "family" of cable, i.e. RG/6 type, etc.).

I use a RS discone with ~70 ft of RG-11. It works great with both my scanner and my 2m/220/440 Amateur tranceivers. The SWR is <1.2 across the ham bands. Not much effect of impedence mismatch there.

Don't worry about impedence mismatch too much (unless you transmit), worry about the line loss, connectors and weather proofing. Those factors will affect your receiving ability much more than a small mismatch. Besides "F" connectors, adapters, etc. are inexpensive and easy to assemble (WATERPROOF !!!).

Phoenix Sky Harbor tower did a super job coordinating all the blimp, helicopter, and banner aircraft traffic over Sun Devil Stadium. This was in addition to their normal Approach and Departure traffic. Sun Devil Stadium lies about 3 miles due east of the airport's runways (8/26 L/R)

many pilots were heard complementing the controllers for their excellent job. I wasn't able to make it to the game. I did however keep up on the action by listening to the radio, television, and my scanner radios!

> Me three!

I figured you to be at least 10 years old.

>Too much of-topic crap here. (He says as he posts an off-topic message.)

So who made you read the off topic posts? Are you so slow and simple you
can't read a message header and skip it.? When you log on to a newsgroup
do you read every single message posted? Have you noticed that I only respond
to messages already posted and don't initiate any new ones?

>I'm quite prepared to E-Mail all off topic peoples with many meg's of
>garbage, and as many have complained, and none have heard, this is what
>I must be forced to do to help reclaim the group.

Ahh, the Usenet Savior! Hey go ahead and E-mail bomb me. It is a two way
street dipstick, except when I return the favor your ISP will receive copies
of everything you send me. I wonder how they will enjoy your many megs returned

twofold? If you don't like it don't read it. You seem to have less brains than that given by God to dogs and other small simple creatures.

Have you also noticed how quiet it gets until some turd brained moron pops up and complains and makes threats? You should considering you seem to be forced to read everything that comes accross the Usnet.

BTW, did they ever figure out if your VD was from a dog, dingo or farm animal??

I am from Europe (Belgium), and there seems to be a possibility to crack the GSM signal. Some rumors are "in the air" that there are CD's available from the UK, containing the necessary software to listen to any channel in use you can intercept. Do not have a/THE proof, but I am always very prudent in these things. Also : Belgian Telecom c said to offer its cooperation in tracking down GSM conversations between suspected dealers. Newspapers reported that the accuracy in locating a conversation is approx. 300 m(eter). Well, some guy from the company itself said it is possible to track down someone up to 10 meter (= approx. 30 feet / you know : mathematics and triangles).

You're obviously using one of the newer Radio Shack discones that has
the 824-849/869-894 cellular spectrum deleted from it, while your
rubber-duck antenna is an older model that came out before the ban on
eavesdropping on CMTs!

2516. 800 mHz sensitivity on PRO-62

Newsgroup: rec.radio.scanner
Date: 1996-01-30 00:00:00 UTC
From: sprouse@pgh.net
Message-ID: <4em7rj$f4v@dropit.pgh.net>
Source record: 241113

A friend of my fathers bought a PRO-62 for his wife to listen to local police and fire with. Neither
he nor his wife had the first idea of how to go about programming it or where to find the frequencies to plug
in if they did. I offered to take the radio and program the banks in ever increasing coverage areas (local,
city, county, state etc.) and set it up for them.

Last night I started and found that when I programmed in two 800 mHz frequencies used in a neighboring community (both repeaters with strong signals) that the scanner would not stop on those
channels when they became active. If I go into the manual mode and stop on either one I hear them fine.
Likewise if I make either of them the priority channel and enable the priority function when that channel
becomes active it locks up on it. From the SCAN mode however it just buzzes on by like nothing was
there. Do I have a bad radio or is there some design flaw with this model? I have heard complaints about
some of the Radio Shack hand held units but have not followed the specifics. By the way is the PRO-62 a
GRE radio? Any info will be greatly appreciated.

From: smcintyre@whoi.edu
Message-ID: <smcintyre-3001962158170001@joltcola.whoi.edu>
Source record: 241119

This is probably a very basic physics/engineering question, but how exactly is it that a device such as a scanner could conceivable cause interference on a plane?

I would have thought that any electromagnetic fields generated by either the speaker or scanning circuitry would be almost infinitessimal in order to avoid feedback upon itself...no?

thanks,

scott

I don't expect advice, however it would be nice for the "sales person to understand what I was talking about. Example, when I asked for the 1996 edition of Police Call.

I did this recently in the store on Richmond Highway in Alexandria, VA and the response I got was "Huh? The WHAT?". Very Intelligent. I then had to show the "sales person" what it was in the catalog.

Advice, no. Simple knowledge of the items that you sell, YES?

>Marshall Norton.

Marshall, check out Scan*Star for Windows. It uses a technology called the Scanning Engine which is 32 bit, and runs inside the Windows kernel. This enables it to achieve full performance, and run up to 10 radios simultaneously, even on a loaded system.

Try this test: start up a competitors software (either Windows or in a DOS box) and watch the scan speed (disconnect antenna). Then start Microsoft Word. Does scanning keep going at the same speed, or stop? Now try this with Scan*Star.

Download a DEMO from our web page: http://www.scanstar.com

Well Jim, I've had my BC220XLT since last August, and I must say that I am extremely happy with it.... It's a very well made scanner and extremely tough to boot... Not a single problem with it as of yet, and I don't expect any at all.... I have a much older Bearcat 210 that runs execellent to this day...And that scanner was made in 1983.... So there you have it.... Of what I've read about RS, I would be terrified to buy one... But that's my opinion... Good luck in your quest....

If you go to the local hospital and ask for the cardiograph tapes,
you can use them. They are 2 to 3 hour audio tapes. here in Canada, the
hospitals only use them once so that in the event of lawsuits, they can say
that all of the equipment was in prim condidtion. They sel them for about
2.50 canadian.

Dear Sir,
As an Alien Bounty Hunter, information of this type and magnitude
is invaluable to me!
I would just like to add a note to your post here: I have found
that when utilizing alien scanner frequencies, reception is often
enhanced when the individual monitoring the frequency wraps aluminum
foil around his/her head leaving approximately 8 inches vertically
standing and rising from the frontal cortex area. Positioning him or
herself directly in front of, and facing, the scanner, the monitoring
individual should then squat, squeeze the eyes closed tightly, and
place closed fists on each side of the face.
May I ask...would you happen to have any good frequencies where
MJ-12 conspirators can be monitored at?

Regards,
ZVEEB

I am not having much luck with this either . I have the rotating "/"
on the top right`ish of the screen turning at more or less a ratio to
the freq of the input signal but nothing comes up on screen. My scope
shows a square wave of approx the same freq of the audio input going
into the CTS pin. But other than that it`s totally dead.

Maybe I am not tuning into a POCSAG signal are most/all pagers using
this format ?? Is it a standard format ? Anyone know the freq of a
confirmed POCSAG broadcast in the W.Sussex area ?.

Any help appreciated

Thanks
Justin

Hmmm... If you can buy a new R9000 (since you are in a business that will
allow you to do so), then you can get an un-restricted R-7100.

Me, I'm lucky. I have an older R-7100, full coverage! (No, it's *not* for
sale!!) :-)

==========

Try this, sometime:
Go to any decently large store, and ask for a specific item. Many times,
you will get an answer that means that they don't know about that item.
Just yesterday, I went into a large computer store here in Phoenix
(CompUSA), and asked where thr ZIP drives were. "The WHAT?" One of the
hottest computer items going, and the salesperson didn't even know what
it was.
Radio Shack has no lock on sales drones, by far.
As for expecting the salesperson to understand what you are talking
about, let me say this. I've *BEEN* a sales person, and believe me, most
customers don't know what they are talking about. Not all, for sure, but
MOST. I'm sorry if this isn't what some of you want to hear, but facts

are facts.
Don't get offended, get educated.
Stand around sometime, and listen to people describe their wants; "I need that program that prints labels." "Do you have that game that shoots airplanes?"
"I need some disks." "What kind?" "The kind that go in my computer!"
"I bought this program here, and it doesn't work. What's wrong with it?"
I've heard these in just one store in less than half an hour.
Try this in an auto repair place, and you'd be amazed at the ignorance that abounds.
Is this Radio Shack's fault? Of course not.

Something else to consider: many of us here have been into radios of different sorts for a long time; in some cases, longer than that salesperson has been out of diapers. Of course s/he doesn't know as much as those of us in that position! Hell, I know more about washing machines than the salesmen at Sears do! Not because they are dumb, but because I've educated myself.
If more of us would educate ourselves on what we want to purchase, we wouldn't have to rely on some kid trying to pay for school.

Sure, we are all newbies at first. But it's not the newbies complaining about Radio Shack, is it?

What it amounts to is this: Radio Shack is no worse (or better) than any other such store.
Maybe we just resent the fact that Radio Shack is an excellent source for electronic goodies, yet they don't give out free classes.

>Thanks Tandy Co.
>Dave Roy
==========

Hmmm...
Did you read the contract? Were they right? Yes, they were.

You make a mistake, and then complain when you have to pay the (agreed
upon) price for the mistake?
Why? What is the thought process that says you are not to be held
responsible for your mistakes?
Was it Tandy's fault you made a mistake? I don't think so. Yet you expect
us to believe that somehow Tandy is the bad guy here?
Grow up. Take responsibility for your actions.

I am a stockholder in Tandy and a former manager. Why do you expect advice?
The same problem is at places like Lowe's and Home Depot hardware stores.
These places are set up to be self service and value (price) oriented.
Americans expect to pay least possible yet get the same service that
they received at department stores. Advice is valuable. It costs time
and money. My lawyer gives advice at $250/hr. Hardware stores, radio stores
and such are either going to be expensive and user friendly. Or value oriented
and like a supermarket.

2541. Ar8util rev. 1.2 is available

Newsgroup: rec.radio.scanner
Date: 1996-01-30 00:00:00 UTC
From: Jim Maurer <73537.1405@CompuServe.COM>
Message-ID: <4ekapedlk1@mhafc.production.compuserve.com>
Source record: 241139

Ar8util rev. 1.2 is now available. You can ftp it from
slxbbs.specialix.com, it's in the pub/misc directory under the name
ar8uti.exe. It's a self-extracting zip archive. This is the only
AR8000 or scanner releated file on this system! The other toolkit
directories are for Specialix serial I/O cards.

New features include:

You can now move or copy channels within a bank.

Deleting channels now asks for confirmation before deleting.
(Thanks to everyone who request this!)

The program has been compiled, so you can run ar8util.exe without
having Qbasic on your machine. Source code is still included.
This is why the name of the zip archive changed.

There is now a system file included with a revised US bandplan,
as well as no frequencies locked out.

Give it a try and let me know what you think! It's best to reach
me at jim@specialix.com. Unfortunately, I probably won't be able
to respond to your messages until next week. As before, this
program is freeware.

Consider the use of and old VCR -- you can get 6-8 hours.
Typically, if the old units go bad -- it is usually a video
or belt problem so you can pick these up cheap. You could even
consider an old Beta.

Of course you would need to go from RCA out to somthing to hear
the signals. Some units have headphone jacks.

2544. Wacky BC855XLT Problem

Newsgroup: rec.radio.scanner
Date: 1996-01-30 00:00:00 UTC
From: Jim Whitbeck <whitbje@mail.auburn.edu>
Message-ID: <Pine.SOL.3.91.960129221554.18253D-100000@mallard.duc.auburn.edu>
Source record: 241142
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I was programming my BC855XLT (with the memory mod and the "other" one) recently when it went slightly beserk. I had programmed all 100 channels, then decided to change the last 20. I typed in the first one, and it was entered into all 100 channels. I re-entered them and have had no problems with that since.

However, ever since this, the search function is malfunctioning. It now searches in reverse order. I know some scanners have selectable scan direction, but this one doesn't. Also, the "Hold" and "Limit" buttons, which normally serve to step the search freq up and down one step, now only step it down. They serve the same functions in Manual mode, but function normally there.

Does anyone have any thoughts as to why? I was programming at the computer at the time; could RF possibly have zapped something?

Jim

I had the same problem last year with my manual button.
I went to Radio Shack and ordered the "keytop" (rubber

keypad) part # KC-0387 at a cost of about $4.00 and installed it and it took care of the problem. The metallic paste on back of buttons wears off, rendering you're most commonly used button useless. It's a fairly easy job.You have to unsolder one wire holding two boards together, snip off one extra rubber standup on new pad (the one below the number "0") install new pad, resolder wire, put back together.

Happy Scanning, t_erb@parrett.net

Many thanks my friend who ever you are. I am curious to know who "Grove" is that you mention. Could you comment on this? I am in the Two-way radio service business and have need of this blocked range of frequencies to monitor for interference . I thought for a while I was going to have to resort to a R9000 which is awfully expensive. Again many thanks. I would like to hear from you here or on my E-Mail chinkle@exis.net

Ever since ICOM decided to delete the 800 - 900 MHZ coverage from its IC-R7100 receiver,
older R7100's demand premium prices on the used market. ICOM insisted that the R7100 was
now made in two versions, one for the general public and another (with 800-900 coverage) for
government and law enforcement agencies. The extended coverage version also sells for $200-$300 more! Per discussions with ICOM there were very clear that this was done to comply with
legal requirements that prohibit new scanners from be capable of receiving cellular telephone
transmissions. My opposition has always been why we should be penalized if we want to listen to
local law enforcement agencies within the 800 MHz band. Personally, I have no interest in
listening to cell phones when a receiver as competent as the R7100 opens up almost 2 ghz of
spectrum.

I recently noticed that Grove now offers the R7100 with "restored" coverage so I set out to find
out how it was done. Performing the following procedure will allow you to listen to local law
enforcement with the 800-900 mHz portion of the spectrum. Remove the screws that hold the top
cover and disconnect the speaker. Next, remove the two flat head screws that hold the metal
shield covering the rear of the front panel.. On the rear apron, remove the two screws that hold
the upper chassis to the lower chassis. Finally, remove the antenna cable that is connected to the
circuit board assembly in the rear right corner of the R7100. Referring to the owners manual,
CAREFULLY separate the upper half of the receiver, inverting it, setting it beside the radio as
illustrated in the owners manual. Be careful not to pull on the cables that connect the upper
portion to the lower half of the radio. In the front of the owners manual there is a small paragraph
that explains the various jumper options for the R7100's CI-V interface options. It's on this board
that the modification is done. The board is located behind the "M-SET" switch. The jumpers are

actually circular pads, split vertically. A drop of solder constitutes a jumper - no solder = no
jumper.

Locate jumper "A6" as illustrated in the owners manual. Above "A6" you'll see a small ball of
solder. Using solder wick, CAREFULLY remove the solder, exposing the split circular pad
beneath. The space between the pads is very small so be sure to remove all the solder. Reassemble
the radio and you're done!

Hello anybody,

I have for sale a AOR-8000 hand held scanner. This one has the new keypad
with the printing that does not rub off.

Radio, box, manual, charger, batteries, optional leatherett case.
All this for $500.00 Yankee dollars.

Would prefer to sell locally (S F bay area) but will ship UPS any place.

Thanks and good bye (buy!)

Ah, the imprecison of the English language. didn't "end in A" or
"contain an A". Sorry for being pedantic. It's just that
when I'm not, I often misunderstand. None of the serial ended in A;
they began with A. Thus, it's the usual state of affairs when the FCC ID
ends in A and the serial number doesn't (*end* in A).

Thanks.

Maybe I'm being dumb here, but I don't understand the difference. Whoever recorded the call between the wife and the hitman was illegally monitoring a private call. I don't see why it makes a difference whether it was a cellular phone or cordless phone she was using.

Isn't using the scanner to listen to the cordless transmissions the same as tapping the land wire?

I purchased my BC3000XLT from Scanners Unlimited. Their prices are more
expensive than mail order, but they gave me a great trade-in for my PRO-2021
and Glenn was very helpful and provided great frequency lists of the Bay
area. I didn't mind paying a little more for great service and being able
to see and try out the unit before buying.

Wasn't it Tandy that came up with the slogan "You've got questions, we've got answers"? Unfortunately, the corporate pay policy doesn't allow this slogan to be as fully implemented as they might want. The philosophy is sell, sell, sell. When they come to the counter with their selection, suggest add-ons and accessories. Point out the sale and disco'd items. Try to upgrade to the next costlier model. Suggest the Tandy Service Plan. And don't you dare forget to get that name and address!! Is this wrong? Not really, it's how you stay in business. The post you replied to was concerned for the future of RS. Actually I would say the prospects are quite good for RS and Tandy as a whole (although I do not own any stock). I would be a lot more concerned about a store that paid enough to hire absolute experts in everything they sold, then told them to not worry about making the sale as long as the customer was given as much information as he could possibly use. Don't worry if there are lines of people waiting to check out at the counter, just stand there and talk computers, scanners, whatever, until the customer has had his fill.

I currently work at RS two days a week during off-peak hours. I enjoy the chance to play with the "goodies" and it helps fill my mornings (I work evenings). Since I do not have much chance at making commission during the "quiet" hours that I work, I enjoy taking my time and helping customers with their problems. I have been a ham for about 20 years and worked in electronics maintenance longer than that.

I have been doing this off and on for many years and have seen many part-time and full-time co-workers come and go. Most of them did not have much experience or knowledge regarding consumer electronics. Still, in most cases, they would try to find the answer if they could. True also, some just wanted to collect the money and start another sale. They are a cross-section of humanity just like the readers of this news group, no better, no worse. The difference is that they have also been on the other side of the counter as a customer. Have many in this group have had the experience of being on the sales side?

As with the sales people, the stores are also a cross-section. Some are good, some are not. It depends on what you want from them. Almost every week, I hear from pleased customers when I took the time to help with a problem even if it did not result in a sale. I also get it in the shorts from customers who refused help, purchased the wrong thing, then returned and vented at me or my co-workers for their mistake. And, yes, I do make mistakes as well. Sometimes I hear in vivid detail what trouble my stupidity caused.

Customer "attitude" can be a pain for us as well. I have seen the comments of some of them on this group. The type I refer to is the one who has great knowledge of one discipline in electronics (computers, CB, scanners, sound systems, cell phones, etc., you get the idea). They are either so smug and condescending that it makes you want to puke or enraged that you don't about the specs on the latest version of the Frammis Mark IV that another company makes. Before they do this, THEY should attempt to learn about all the changing product lines represented at a RS.

That describes my experience behind the counter. In front of it, I have had both pleasant and frustrating experiences. It can't be helped, people are different. What pleases one person, angers another. Frequently I have had to explain to the sales person (RS or otherwise) what I want and show them where it is. I try to be patient, knowing what the job is like. Other times, I am truly clueless and express my appreciation for their help.

In closing (thank goodness!!), if you want to be pampered when shopping, try the South Coast Plaza in southern CA. Its not as covenient as RS, but they have valet parking. Hint: Bring LOTS of money.

Makes perfect sense to me...your choice of coax sucks!

You have to remember that at high frequency ranges such as cellular (and other 800 MHz systems), the signal loss is VERY high in the cheaper cables. The longer the cable run, the bigger the problem. By the time the sugnal gets to the back of your radio, there is nothing left. That's why hooking up a back of the set antenna or rubber duck is often times better.

If you need a long run of cable, like the 40' you mentioned, and you want to monitor 800 MHz stuff, invest in GOOD coax. Use RG-8 at a bare minimum and I would recommend Belden 9913 or better. Using a better coax will deliver the signal to your scanner with a little more umph! Also, use GOOD quality connectors. I recommend using "N" connectors. I also recommend NOT buying the connectors at RS as my experience shows their connectors to be of poor quality (at best). Lot's of leakage.

Give it a try!

John Potts (jpotts@crl.com) wrote:
: I am interested in purchasing a tape recorder advertised in MT that
: tout's 10hr recording time. It is sold by VIKING INTERNATIONAL out

It's actually 5 hours / side with no autorevers option available. You
must manually flip tape to get 10 hours. See below.

: of San Francisco. I would like to hear from users of this recorder
: about its performance. I am interested in the following.

: - Does it have excessive warble (speed not constant)

NO warble for voice. Some small amount for music.

: - Is it's tape speed constant throughout the tape or is
: it faster or slower at the begining, middle & end of tape.

Constant speed at capstan as far as I can tell.

: - What is the sound quality like.

Very Good for Voice. Your mileage will vary for music.

: - What length tape do you recommend using for best performance.

T120 from radioshack.

: This is going to be a gift for my wife to use to record traffic on the
: scanner and various radio talk shows she likes.

: Thanks for any input you could supply.

: John

I've been using the Viking 6 hour tape recorder. I'm very happy with
it and will at some point buy a 2nd unit with the options mentioned
below.

Some recommendations:

Get a dual-speed (4 hour/8 hour) unit. This will let you exchange
tapes with the Reel Talk AM/FM radio/cassette recorder/player sold by
the C Crane Company and advertised on Rush Limbaugh/Gordon Liddy etc.
shows (4 hour/side of T120 tape). It's very convenient to be able to play
back on a different machine so you can leave the recording machine
wired up or even recording while you are playing something else back.
The 4 hour mode will also rewind tape at 2x recording speed if you
record at 8 hours/side. I guarantee that you will wish you had this
feature if you don't get it. Plan to have a standard cassette tape

player handy to rewind your tapes otherwise.

Get Variable speed control to speed up voice playback. I almost always play tapes back at the maximimum (50%) increase.
Make sure variable speed control only active during playback. Otherwise you will wind up recording at fast speed and be unable to speed them up.

Ask about a 30 second fast-forward feature: I use this feature a LOT on my VCR to get through commercials. 2 minutes of commercials diappear with 4 quick clicks.

Get optional VOX feature.

Get Monitoring jack option so you can listen to signal while it's being recorded.

Get a good pair of mono earphones with 1/4" jack. I dug up an old pair of phones for shortwave and they work real well with recorder.

This is a well-made recorder. I have resisted the impulse to take it apart since the warrantee is void if I tear the sticker covering the screws.

I'm afraid the server that was running the list is dead and won't be getting fixed. I plan to order a new server today and I'll reload the list when I get it up and running, but it is probably going to be at least three weeks before that happens.

>anyway?

ROFL. Very good Alice. As I sit in the front row I look back and see NYCSAN,
Richard Sgrign, Jerry,PjB and Michael Alexander in the back row doing some
strange things to each other. Now I have kissed 3 men in my life, my Father,
an Uncle and my Grandfather but unlike these guys I never used my tounge!
Infact except for my Father all incidents happened when I was a very young
child but these guys are quite a bit older. Unlike these gents, I had all my
clothes on and didn't spend part of the time bent over like I was looking for
a bar of soap in the shower. No wonder they are hiding in the back!!

> PjB, I don't believe your posts are as amusing as Mr. Cheeks, but

they have that choice, but they shouldnt go around touting themselves as God's gift to the uninformed with slogans like "you have questions, we have answers." the only answer they seem capable of handling is what time they close.

unfortunately for radio shack, they cant even entertain a slogan like "we have stuff cheap, you want it - come get it." in fact, aside from the radio equipment (i think?), *everything* else is ludicrously overpriced. i cringe every time i see some computer illiterate butthead considering the purchase of a tandy computer for $2500 or a "realistic" stereo component.

Carlyle,
I see your point entirely, but I have just one comment. With a
catchy slogan like "You've got questions, We've got answers"
does this not lead the average person to believe that the sales
staff is somewhat knowledgeable on the products they sell. Maybe
the powers to be should change the slogan to "You've got
questions, Take your business to ..insert your favorite store
here.... where they have the answers.

I've had my Pro-60 for several months now and am also satisfied with it. Batteries do go slightly faster than I used to also. I dislike the long unflexible attenna. Since I mostly listen to UHF, I purchased a stubby attenna. I also purchased the case. It's a thin-leather like material, that doesn't cover the lcd window. They could have done a better design job on that.

I think Bill is probably living in a perfect world. Unfortunately or
fortunatley, we don't live in a perfect world. Just because it may now be
illegal to listen to such doesn't mean those frequencies can't be
received. Maybe I can explain myself better for Bill's sake. I still lock
my car doors even though it's illegal to steal. Murder is also illegal,
but I always watch my back. A little common sense is needed here. If you
tune your scanner to the 49-49MHz range you will still receive cordless
phone transmissions. Remember just because something is illegal, doesn't
make it impossible.

Lots of cordless activity here:
46.61 46.63 46.67 46.71 46.73 46.77 46.83 46.87 46.93 46.97

Not so much yet:

2577. Seeking New Base/Mobile Scanner

Newsgroup: rec.radio.scanner
Date: 1996-01-30 00:00:00 UTC
From: ghuska@gwis2.circ.gwu.edu
Message-ID: <4em062$ml@cronkite.seas.gwu.edu>
Source record: 241175

Help seeking a new base/mobile scanner:

Have not been keeping up on what is available, but it is time for me to upgrade from my bare-bones BC 560XLT. If all the information is in a FAQ somewhwere, could someone please point me there?

Am not sure if they are still made/around, but I think I need something like a BC 760 or 890. Are these good all-around units or is there something better from another manufacturer?

What I would like (in no particular order):

* 800 Mhz coverage (primarily for public safety systems)
* 100 - 200 channels (into several banks)
* More than one priority channel/selectable priority channel(s)
* Full LCD display, with frequency display
* Selectable Search and/or one touch searching
* One touch weather
* External speaker jack
* Backlit controls (not necessary, but nice)

Am looking in the $250-325 price range.

Must be easy to switch between base and mobile uses.

I would also be interested in any information that anyone has concerning slide-out mounts (similar to a pull-out radio or those CB slide off mounts). I don't expect that this is a standard feature on any radio and am curious where I might go to for such an accessory.

As always, I appreciate any and all help. Feel free to post responses here or to mail me directly.

An audio recorder that runs for 10 hours could be quite useful.
How does this tape recorder work? What kind of tape does it use?
and, of course, How much does it cost? I have often thought that a VCR
equipped with either highfi sound or one of those digital recording adapters
which were sold a few years ago would make an excellent system for archiving
logging recordings. The only real drawback to a VCR is its start-up time
if one wanted to use it with a VOX or COR. The sound quality of such a system
would be almost like being there all over again.

>ad that it can be used for something illegal?

Illegal?? Maby getting codes for somebody's voice mail or answering service.
Getting Credit Card numbers when using it for Tele-Bank or something.

Don't buy any of that junk, most is over priced . Software and or hardware
for your computer is the best way to go for deciphering DTMF. And hay for the
same price these SCAM Spy Shops charge, you can buy devices that will also
decode ACARS(aircraft communications addressing), GOLAY,POCSAG(digital
pager modes),CTCSS and DCS(digital coded squelch). I on the side I run a Spy
Shop and know how many 'Spy Shops" are selling DTMF decoders for over $100.

SCAM SCAM SCAM. These Spy Shops are getting so bad I am going to change
my companys name. I want to make money but not STEAL from the customer.

Carlyle Gerde wrote:
>
> I am a stockholder in Tandy and a former manager. Why do you expect advice?

Hello? Did I just hear that correctly?

Why? Because I might be your average Joe with between $100 and $500 to blow on a somewhat complex piece of gear (like a RS scanner) that comes in all different models and I have no idea where to start. Yes, I think I'd like a little advice so I can make an informed decision before handing you my dough. Isn't part of SELLING any product involve giving advice to the customer? Although it's perhaps biased towards the product you are selling, it's advice nonetheless.

There is a guy at my local Radio Shack (Matt) who is excellent. He is being promoted to Asst. Mgr., and good for him. He is a couple standard deviations above your average electronics store sales guy's knowledge of the products his store sells. And he's FULL of advice. Perhaps that's why he's getting promoted into management while others find themselves as former managers.

> The same problem is at places like Lowe's and Home Depot hardware stores.
> These places are set up to be self service and value (price) oriented.

Yes, but their advice is still available, and free, and generally given if it helps the customer buy what they really need. Half the people waltzing into a hardware store need advice, and by gum they will get it - that's part of running a hardware store.

> Americans expect to pay least possible yet get the same service that
> they received at department stores.

Hmm. My experience is that department store sales folks know less about what they sell vs. a TV store or computer store or camera store, etc.

> Advice is valuable. It costs time and money.

Bah. That's part of the cost of doing business if you are selling something.

> My lawyer gives advice at $250/hr.

Of course he/she's gonna charge you a lot! Cuz they are selling ADVICE ONLY - that's their stock in trade! It cost THEM time and money investing in an education to learn how to give you all that great advice. They are not selling anything in ADDITION to that advice (unless it's a will, or appearance with you in court). That's the difference - they are not selling something else where their advice only helps sell the product (or helps the customer make an informed decision). They sell JUST advice, and have a right to charge plenty for it.

So I don't think Radio Shack hires lawyers to staff their retail stores.

> Hardware stores, radio stores
> and such are either going to be expensive and user friendly. Or value > oriented and like a supermarket.

That's my point - Hardware stores, radio stores, and supermakets DON'T sell advice as their product, like lawyers and fee-only financial planners do. Giving advice to help the customer make an informed decision is built into the cost of doing business at places like retail stores and supermarkets and car dealers.

The only retail outlet you can buy something and NOT have the right to ask for advice is standing in front of a vending machine ready to pop in those quarters.

BTW, you can even get advice at a supermarket (ask the butcher what's the best cut of meat for a stew, or ask the baker what's the best buns to buy for bratwurst). They expect to be asked for the advice, even though a supermarket IS indeed set up for self-service.

My $0.02 of non-advice.

Mike

2585. Help:OS456/Pro-2006 Install Problem

Newsgroup: rec.radio.scanner
Date: 1996-01-30 00:00:00 UTC
From: gwalton@ccm.tdsnet.com
Message-ID: <310d7f08.681674@news.ccm.tdsnet.com>
Source record: 241230

During installation of a OS456 into a new Mod.20-145 Pro-2006 I ran into a problem in step 10.3 of Optoelectronics install guide:

The analog wire is to be attached to pin 12 of IC4. The OS guide says this chip is a 14 pin 10420 (marked E49 in the photo) --- but the IC4 chip in my Pro-2006 is a 10420 marked E85 KR with 16 pins! I would appreciate suggestions on which pin to attach to from anyone who has done a recent installation.

Thanks in advance.

George Walton

there hiring people that don't even know what the are doing

i went in to the store and asked if they had the lighter plug
for the PRO-2030 the manager said what is that i said a scanner!!
(hello!!) the guy looked in his book for it and did not find the
scanner in the book and said there was NO scanner that was made
with the numbers PRO-2030 i left steaming i call my local
radio shack and said the plug is right here and here wrote
a note to the manager of that store the manager call back
i toll him my story and he said he will take care of it

'OFFICER DREW' OF THE PRICE POLICE SAYS "WHOA!!"

Sounds to me like you're just trying to make a quick profit, especially
since this particular scanner was just featured on closeout special for
$139 (including on 12/29/95, the date that you claimed to have purchased
the unit)

Since the PRO-2026 has been discontinued, I would guess that the sale
will be on again in the very near future.

2589. Radio Shack Salesdroids Strike Again!

Newsgroup: rec.radio.scanner
Date: 1996-01-31 00:00:00 UTC
From: VUBS79A@prodigy.com
Message-ID: <4eo22o$vf6@usenetw1.news.prodigy.com>
Source record: 240984

The best (worst?) example of Radio Shack Salesdroid incompetence was displayed to me a couple of years ago. I was in one of their stores and overheard a most interesting conversation going on at the counter. A construction foreman had come in and was looking for a couple of walkie-talkies for his crew to use to communicate with each other at a job site. Of course, Sammy Salesdroid was all smiles and had just thing for him! Can you guess what it was? A couple of CB walkie-talkies? No! GMRS? No! Business Band Motorolas? No! Instead, S.S. reached into the display case and pulled out...an HTX-202. Yes, that's right, a 2-meter HAM transceiver!! He quickly informed the foreman that "two of these would be perfect for what you want to do." When Mr. Foreman balked at the relatively high price of these ($259.99), as compared to the CB Walkie-Talkies ($79-99), S.S. proudly exclaimed "But they're worth it 'cause you can talk a lot further on these without interference than you can on CB. There's also lots more channels to choose from!" No mention of license requirements, testing, etc. was ever made to the prospective customer.

"You've got questions, We've got answers"... WRONG ones that can land you in prison with a $10,000 "monetary forfeiture" to the FCC for unlicensed operation on amateur radio frequencies!!

Clones are being stopped by companies installing s/ware in the cell system
which looks for simultanious registrations of the same MIN/ESN pair (a clone)
and depending on the action taken, you account may be suspended to save you
in case someone else has the clone, (How are they to know?)

I have encountered the same problem on several occasions. Several time
I have gone to RS to ask a question, and make a small purchase and have
ended up knowing more than the salesman. Four times I have been offered a
job as their "Radio Guy" becuase they said they didn't have anyone
knowledgeable in that field. I suggests that they change their name to TV
Shack, or Home Electronics Shack. I also told them I would be glad to
take the job... If I ever had to go back to working for $7/hr.

While I feel that I have a good working knowledge of Scanning, SWL, and
SSB CB, I would hope to have a salesman who knew more than me. I have
since taken my business to another store.

Is it my imagination, or do they seem to sell a lot of stuff that demands purchase of extra parts?

Case in point, a few of their "Scanner" antennas come with SO-239 (or is it PL-259?) connectors on them (not to mention having crappy cable for the advertised band range). Yet I believe every one of their scanners has BNC connectors as standard! Hmmm... looks like I need to buy an extra part!

>>I suppose they would work fine in different cities at the same time
>>though. Does anyone know for sure??

Not for long. The carriers in different markets share database
information on telephones that are roaming. It won't take long for your
carrier to spot a clone in another city and possibly suspend your
service.

There is no way under FCC rules to clone a phone for legitimate use on
your account. Cloning is outright prohibited now. Some carriers are
offering "extension" service because their networks can support it.
However it is my understanding that your extension phone under these
programs cannot roam - this is due to the way roaming information shared
among all carriers, including those that cannot a phone number with two
ESNs.

>>I have a friend who claims he used his phone on a private jet
>>and got roam charges from kansas and Oklahoma on his bill with the
>>same times on them. (he could be FOS).

Possibly FOS. I would doubt that a cell phone would work worth a damn
from inside a jet at high altitude. But if you could get a call to go
through, it could theoretically go via any system that was within "line
of sight" of the plane. This is also why it is illegal to use a
cellphone on any aircraft while airborne.

2598. Re: RS discone problems with CELLULAR!!!!!

In article <4eik80$41n@news1.usa.pipeline.com>, bumologist@usa.pipeline.co says...
>
>Your problems with your antenna arent the antennas fault,it the coax!Change
>that JUNK to RG-6(TV coax)

I believe that RG-6 is 75 ohm cable.
Why wouldn't you use 50 ohm? Isn't the output impedance of the radio
and the impedance of the antenna feed point 50? What benefit is accrued from
RG6?

Chris

I appreciate all of your help and quick responses. Yesterday I picked up
so RG8 and installed it, but it still didn't work.
Then I got so pissed I pulled out the ground wire and wripped it off of
the scanner.

Turns out that was the key!!! It works great!!! Don't know why but it
works great.

(my guess is, is that the ground wire was to thick (almost 1/2 inch braid)
and it affected the reception by grounding it out.)

Thanx agin for all the help!!

2600. AR8000 accessories

Newsgroup: rec.radio.scanner
Date: 1996-01-31 00:00:00 UTC
From: pleines@stars.gsfc.nasa.gov
Message-ID: <4eoric$82b@post.gsfc.nasa.gov>
Source record: 240995

I've noticed some ar8k owners discussing an i.f. filter mod. During the discussion, someone said that the filter mod would not interfere with the speech inversion accessory. My question is-where can you find such accessories for the 8k?
I own one, and have found it to be a lot of fun. I'd like to enhance "the beast" to cover all the signals I can possibly receive. Thanks!

Jeff

that's what he call's it radio shake he said that there all
loser's the hole work force he's the only one there that
know's what he is doing there he's got a woman working
with him that does not even have a high school edu.

that all i have to say

P.S. he is quiting soon (he hope's)

2602. need 10 to 150 khz FM demodulator

Newsgroup: rec.radio.scanner
Date: 1996-01-31 00:00:00 UTC
From: bmm1@freenet3.scri.fsu.edu
Message-ID: <4eomvr$mbf@freenet3.scri.fsu.edu>
Source record: 240997
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.scanner

Does anyone know of a chip that is used to demodulate multiplexed
signals such as FM sterio, secondary audio programming (SAP) on TV
sound and SCA on FM broadcast? I thought I could use my HF radio in FM
mode but I tried it and it didn't work. I finally figured out that
although the readout goes down to 0 hz it actually won't receive
anything less than 150 khz (the manual says so and I can hear the
relay click out.)
I'm sure there is a small, easy circuit to do this.

Bruce

I added a mini-stereo jack to my 8000 for just that purpose, and it
works. As for the wiring, just look at the silkscreen logo on the front
of the CX-12. There you will find the TX/RX configuration. Also, I added
another jack for the squelch line, but you don't need it if you use
Scancat Gold to control your scanner.

When complete, take a 3/8 inch stereo cable, crossover the TX and RX
lines, and then you will be able to plug you flat flex cable into someone
elses 8000 and via your built in jack, transfer banks, system data, etc.

Steve

2605. AR8000, narrow filter mod

Newsgroup: rec.radio.scanner
Date: 1996-01-31 00:00:00 UTC
From: klimasewski@fccvde.enet.dec.com
Message-ID: <4eo70l$ad9@mrnews.mro.dec.com>
Source record: 241000

I have designed a switching scheme that allows the user to select
the stock 12KHz AM filter or the narrow SSB 4.0KHz while still in
the AM mode. I have found this to make a BIG difference when trying
to receive a weak shortwave station next to a very strong one.
The only part required is a switch and some wire.
My mod has no effect on the use of the DS8000 speech inversion accessory.

Send me email if interested.

You would be surprised at how often this is the problem! Same as people
who come in wondering why their cordless phone never works, and only to
find out that they have to charge it..

BUT SERIOUSLY,

You can't expect RS sales people to know everything.. Especially with
tandy's pissant attitude, attempting to brainwash RS employees into
thinking that they are high-profile sales people... (shirts, ties, meetings..
all this pseudo-proffesional bullshit) The place stresses 'sell, sell, sell'
and the stupid name & address deal, more than they do learning, and PR.
When I hear from the Dist. MGR, the first thing he tells me to do is
'sell a cellular phone...' There is even a sign in the back of the store
that says to sell 3 items to every customer......(and the pay is not that
great, either!)

True, not all their sales people are knowledgeable and they have had some doggy products... BUT where else can you buy components e.g. capacitors resistors diodes transformers relays etc in most small towns? Thank goodness RS still devotes shelf space to this stuff which probably isn't nearly as profitable as phones, video hi-fi etc. Also, you can get detailed repair manuals for most products at reasonable prices. The shack has its faults but don't overlook its virtues.

Good day all!
Well, as we here in Pittsburgh pick ourselves up from the floor, and attempt to get our little lives back here in order, I thought I'd pony up one of my favourite little friends for sale. :) I bought this one a couple of years ago--it's had only one modification in life--one of the diodes, I believe it is, was mysteriously cut away one evening. However, aside from that, it's exactly the way I got it, and it's loaded up with several hundred freqs that could be of use almost anywhere. (Of course, I'm not presuming that ALL the freqs will work in your area)
If you live in Pittsburgh, PA and are wondering how to dry the tears we've shed for our men, and a present like this suits you--consider the fact that as it sits here in Brighton Heights, I can monitor all the city of Pgh, all the Greentree, Avalon, Sewickly, Mt Lebo, ect, ect action without doing anything but buying it and plugging it in. I'm asking $225 for it, and I'd rather not ship outside the USA, I've tried it recently with the Icom I sold, and it's been nothing but a major nightmare.
Please, do not post a reply to this group, as I rarely have time to get into usenet at all. E-mail reply to:

tunaman@telerama.lm.com

Hi my name is Dale Harrison and our company Online Electronics has several models to choose from. The BC120XLT costs 146.00 dollars and that includes the shipping charges. This model has the aircraft coverage and 100 programmable channels.

We also carry the SC150 SportCat which costs 182.00 dollars and has aircraft plus the 800mhz band and is also a 100 channel programmable handheld scanner.

We also have a lot more listed at our web site. You can stop by and check it out at:

URL http://mall.turnpike.net/~caj26287/racelink

We have full color pictures of all scanners so even if you do not buy from us you are still welcome to look and maybe see which one you may be interested in.

Our e-mail address is listed on the site if you have any questions you can contact us and we will try and answer any questions that you might have.

Dale Harrison

From: Chip Seymour <cseymour@mitre.org>
Message-ID: <4eomqc$q6b@linus.mitre.org>
Source record: 241009

What can I do to reduce or eliminate engine racket on my scanner?

Symptoms: reduced sensitivity and increased static (not alternator whine) while the engine is running. The noise goes away when the antenna is unplugged.

The antenna is mounted on the plastic tool box in the truck bed. To provide for ground, I have a piece of thick stranded wire run from the antenna mounting bracket to the bolt securing the tool box to the truck bed.

Thanks

> the unit to "skip" over. On some signals, such as the GE 800 trunk
> tones, the mod doesn't work, probably due to the changing signal.

Right, the main difference that can be seen by a simple
detector is the RMS (power) content of a signal wave. Voice
signals are peaky and very inconsistent, with an overall
low RMS value. Continuous sounds, like computer data,
DES/DVP, and IMTS tones are constant and high RMS value.
The DSQ modification offers an adjustable threshhold to
set a "switch point" between RMS values.

When properly adjusted, the only voice signal that could
false-trigger the "resume" function of the scanner is if
an operator whistles or does an "ahhhhhhhhhhhh" into the
microphone.

> One other thing that is peculiar, is that if the unit does stop on a data
> signal, it takes about 5 seconds to resume scanning, not one second. I
> verified this with data signals the unit normally skips over, by turning
> the data tone squelch (DTS) off until I was on the data signal. After
> turning the DTS back on, it was about 5 seconds to resume vs. the
> normal one second it takes when DTS is already on.

That one is an oddball that does not show in all installations
of the DSQ modification. I have never seen it. Thus, it must
vary with the installation practices of the hacker. However,
try turning the SOUND SQUELCH function on at the same time
and see if this makes a difference. In all my setups and
existing scanners, that's the way I run it, and the pauses
on data signals are less than a second.

Another possibility is that there is some deviation from one
scanner to the next in design. But again, I've never seen
the effects you describe. Others have reported it, though, so:

> Bill, have you added any revisions to this mod to make it work better?

As a matter of fact, the forthcoming issue of the WORLD SCANNER
REPORT offers a slight redesign to eliminate that side effect
you described for all installations in the PRO-2004/5/6 and
PRO-2035/2042. This issue of the WSR is expected to be released
on or about January 31, 1996 (V5N10).

Rgds,

Bill

You can get the Pro-43, brand new, in the box, with the cell mod already done from Durham Radio Sales and Service.

They have a Web site at: <http://durhamnet.com/durham/> or you can phone them at: (905)436-2100.

I got my Pro-2006 from them and was very pleased with their service. They may also have the Uniden 2500. Check 'em out!

I'm just a satisfied customer.

The following is an exerpt from the Canadian RS Catalog:

"...Radio Shack has many things to be proud of-our 800 retail locations from coast to coast; our 2000 electronics experts who provide outstanding product knowledge and customer care in our stores;... Our knowledgeable, experienced staff can simplify technology, and answer thousands of questions about how products work. That's why we say, 'You've got questions. We've got answers.'"

Personally I think they should change the slogan to:"
"You've got questions. Get our catalog"

When I read such a thing in their catalog, I expect them to actually know about their products. Like I have written before, when I brought a defective cordless phone back, the manager was surprised to see that he had a Call Display cordless phone in his store. Then it took him 25 minutes looking in the manual to see how it worked. Meanwhile he's telling me about all the features of the phone. Duh! I already know about the features that's why I bought it, just give me a new one!

Don't tell me that Radio Shack is supposed to be self serve when they boast about their knowledgeable staff. The only thing RS staff know how to do is change batteries.

>> Al.
>
>You do not need a decoder to listen with a scanner. Just dial in there
>freq. and listen. Gary
>

A CTCSS (continuous Tone Coded Squelch System) decoder is just a device that alows the squelch to be closed until a defined singnal is transmited (in hz) along with the signal on the freq you are on eg. 141.3900Mhz and a ctcss tone 1B or 141.195hz/139.185hz Base/Mobile the purpose of it is to reduce unwanted noise or co-channel interference. If you tune in some ontario hydro requencys you will hear a strange beeping noice except when someone is talking, on their radios they use ctcss or tone squelch to block out that noise, when a call comes through a ctcss tone is transmitted alongside the freq. that opens up the squelch on the radio letting the message through. So if you don't have it you can still hear everything but in some cases it can sound a little noisy when there is no traffic... Hope that answered your question...

Can someone tell me how to program a Uniden/Bearcat 200xlt to scan a frequency range? Bought a used scanner without manual..I know it stupid. A source to find a manual would be nice too.

Sune Cullberg (sunecoll@algonet.se)

2628. Are mods available for the BC80XLT?

Newsgroup: rec.radio.scanner
Date: 1996-01-31 00:00:00 UTC

Message-ID: <11f7cc$f3b9.2e9@ineter.edgewater.com>
Source record: 241023

Like the title says.

I am new to this sport so bear with me. I bought this new toy about a month ago and I am finding out (isn't the usenet great) that some units can be modified to get some extra frequencies (800 band). Is this one? I checked the oakland FTP site (/pub/hamradio/uniden) but nothing was mentioned for this model.

Thanks in advance,

Phil...

This file is for the benefit of all.

(c) 1995 <All Rights Reserved> Bill Cheek-COMMtronics Engineering

This file is for personal use only and may NOT be placed on a
CD-ROM nor any other media that conveys, stores, or transports
for any monetary cost to the end user, without expressed permission
of the author. This file can only be given away, absolutely free of
charge.

-Bill Cheek-

There is a growing interest in tapping the baseband audio out of various scanners for decoding of a variety of esoteric signals, including CTCSS, SCA, FSK, RTTY, FAX, etc. By and large, such signals cannot be take from TAPE REC jacks, headphone jacks, and EXT SPEAKER jacks because of the voice-band filtering that is done between the signal source and these output jacks.

Therefore, it is necessary to tap the "baseband audio" directly at the output of the discriminator chip for your scanner. The below Table shows a list of scanners, the discriminator chip(s) used in the scanner, circuit symbols of those chips, and three pins of general interest on the chips: RF-Input, Scan Control, and, of course, the baseband audio pin.

Even though your scanner may not be listed, if you can find its discriminator chip, it will be listed with one or more scanners below, the pins of which will be the same for your unlisted scanner! Corrections and additions to this list are requested. See my email and other addresses at the end of this file.

SCANNER DISCRIMINATOR CHIP PINS OF INTEREST

Personally I doubt the FCC has kept the code requirement because of pig-headed hams. They probably have their own reasons, perhaps just inertia. We seem to have way too little influence on what they decide, as far as I can tell. Heck, we can't even get them to allow us to have unrestricted packet-internet gateways, so far.

> interference on a plane?

All radio receivers have a local oscillator in them that is used to mix with the incoming signal to produce an intermediate frequency, used in the radio for further filtering and subsequent demodulation or discrimination to get at the audio portion of the signal. This local oscillator by definition is actually a very weak radio transmitter who's signal can and does radiate from the radio, even back out the antenna.

It is presumed by the airlines that this weak signal might be enough to cause interference with the aircraft's own radios, avionics, and/or fly-by-wire control systems. I don't know what the studies have concluded, but the airlines feel it's enought of a threat to the safety of the passengers that things like scanners, AM/FM radios, TV's, and cellphones are prohibited from being used at least in takeoff, landing, and taxiing. Most airlines prohibit scanner usage thru the whole flight.

> I would have thought that any electromagnetic fields generated by either
> the speaker or scanning circuitry would be almost infinitessimal in order
> to avoid feedback upon itself...no?

It's not feedback, but rather the very small (and yes, I would say infinitessimal) RF field generated by the local oscillator. Keep in mind that there are plenty of wires criscrossing all over your average airliner, above your head, below your feet, etc. that can have an RF field induced in them from nearby (albeit weak) RF sources.

Mike

The modification of cb gear isn't illegal..there were lots of cb rigs converted to low power 10 m rigs after the cb bust in the last decade.

in general the modification of equipment isn't were the illegality is. it's the use of non-type accepted equipment where type acceptance is required.

2642. Why is Cheek down on Andy?

Newsgroup: rec.radio.scanner
Date: 1996-01-31 00:00:00 UTC
From: jimbob@acpub.duke.edu
Message-ID: <310ecf24.3023017@news.duke.edu>
Source record: 241039

Bill Cheek is in the process of attempting a "hostile takeover" of the FIDO net "scanradio" echo/conference. In an attempt to make the FIDO echo look more like USENET, he posted an encoded .gif file there. That's bad enough, but the content of the .gif file was "remarkable" to say the least.

It appears to be a file that Andy Moss put together to show folks how to replace a lithium battery with one of those double-layer memory backup capacitors.

Evidently Bill doesn't know anything about those caps, because Andy specified a 4,700 uF cap (4m7) and Bill wrongly assumed it was a 4.7 uF cap. Then Bill went on to add a snide little remark about replacing a battery with a cap and how stupid it was and that it would "downgrade" a good radio.

Andy and Bill may not play together nice, but Bill sure shot himself in the foot on that one.

One of the "rules" that Bill has for participation in the FIDO echo is that there should be no personal attacks. It looks to me like Bill can't abide by his own rules.

Oh, the other "rule" is that the moderator is all powerful and can *not* be challenged in public.

Jim

2643. Cordless Phones

Newsgroup: rec.radio.scanner
Date: 1996-01-31 00:00:00 UTC

>instead of 88 - 108.

> -Jeff

Yes, most likely you can... But, this would not get you the desired
results. You are talking about going into the VHF air band. This is
an AM band. Your FM radion is NOT capable of this, it is WBFM (Wide
Band Frequency Modulation). This makes it less desirable to use in
any of the "normal" scanner bands. Most all communications does not
need the frequency range of Wide Band and thuse communication is in
Narrow Band. While you can recive and maybe - maybe not understand
the traffic, it is 600% better to hear it in the proper mode.

Does anyone have an image of a MOTOROLA VISAR or MOTOROLA GP300 radio??

If so, can you please either post it in the newsgroup or send it to me please.

Also any specifications on these radios?

Many Thanks..... matthewv@adam.com.au

The application I've seen that use the "super caps" (> 1F) don't use them
as a replacement for batteries. They were used in conjunction
with lithiums. The idea was to retain RAM contents while
replacing lithium. Not an ideal lithum replacement.

)Hi, I was wondering if I could modify an FM radio to pick up 108-128
)instead of 88 - 108.

Sure can. There was an article on this in Popular Electronics, along
about 1968. The mod comprises stretching the coil in the local
oscillator, and dinking with the trimmer capacitor on the antenna
circuit. But note that the aircraft band uses AM, not FM reception, the
front end will not properly track, and reception is pretty mediocre. But
it -is- cheap.

Seems to me that RS *is* expensive, but still not user friendly. I agree
that we don't necessarily *deserve* advice, but that's fine with me
because I don't think I'd *want* advice from most folks at the RS stores.
I've overheard some of the advice given to customers, and it usually
involves buying and additional item or two, whether necessary or not.
But I guess that's what sales is all about, eh?

And they really do need to get off that whole phone-number and address
thing. Haven't they got the hint that people don't like that crap?

Hi,

I'm going to try to make my own homebrew interface to my CX12AR from my AR8000 -- I can't stand the flat cable thing.

What I was going to do is solder another wire to the RX transistor (where there is already one wire for the Scout mod), one to the ground pad, and another to the TX line.

I am not sure, however, how I should attach these wires to the stereo jack I just got from Radio Shack. Should I wire tip to TX or to RX? I know it's not much of a problem to swap, but I'm worried enough about doing this to where I don't want to make multiple trips inside the unit.

Can anyone think of a better way to do this, or of a reason why this is a bad idea? I realise that I'll be losing the squelch port, but I don't see myself using the AR8000 for that sort of scanning anyway -- I'll probably get a 2042 and the Opto 535 for that purpose.

I would appreciate any last minute advice on this!

Thanks!

Scott

If you need long length recording consider using a HiFi VCR in LP or
SP mode. I work at ESPN and we use consumer VHS machines to record
the ESPN Radio programs as an archive log of the actual broadcasts.
It is cheaper for us to do this than to buy some commercial item. We
just chuck the machines when they wear out in about a year. I'm
usually found loitering near the dumpsters.

[snip]

I am overjoyed with Radio Shack. There hours are great, and they have
alot of the stuff you need to do radio/electronic hobby work.

Where are you going to get a BNC to type N connector at 6PM even in
the high-tech valley/trianges?
Cable, wire, shrink wrap, soldering stuff, even some reasonable chips these
days. I couldn't be happier. my expectations are different.

I try to go ahead and buy the stuff that I don't have to buy there, if I
can get it, because I dread the day when they start shutting down these
electronic 7-11's.

Happy til then,

Mick

Sure it might be the only place to get certain things. But they know that
as well. Therefore some of those things are very overpriced. Little
connectors that should only cost about $1.99, cost from $4.99 to $5.99.
Funny since only 2 years ago I saw the same ones for no more than $2.99. I
usually go to a tiny little electronics store now first for such
connectors. At least I'm dealing with an expert and also get friendly
service (at a reasonable price).

The Outer Space Frequency Directory
Author: Curtis, Anthony R.
ISSN: 0-936653-49-3
Published by: Tiare Publications @ (414) 248-4845

Anthony R. Curtis has the Yellow Pages for outer space...
The journalism instructor at Salisbury State University in Salisbury, Maryland, wrote an outer space phone book so people can tune in radio signals from space.
The Outer Space Frequency Directory lists 2,200 frequencies used by weather, navigation, communications, observation, science, military and spy satellites, robot probes roaming the solar system, and many of the other man-made objects circling Earth.
"It's a giant master list of every frequency you could possible want coming down from the heavens," says Curtis, who has been a science writer for 30 years. Some of his recent publications include: Monitoring NASA Communications, Space Almanac, and the Space Satellite Handbook.
Frequencies used in the search for extraterrestrial intelligence are listed along with frequencies where radio-astronomers eavesdrop on natural radio signals emanating from cataclysmic events in far-flung galaxies across the universe.
The recently book includes frequencies used by astronauts in space stations and shuttles. It also covers receivers and antennas and explains how to tune in space signals.
"An ordinary boom box won't pick up most of these radio signals. However, in many cities, you can listen to the voices of astronauts during a shuttle mission by merely using a police scanner."
Although radio signals are continuously raining down from outer space and appear somewhere on radio dials, Curtis points out that many appear as a series of beeps.
Curtis believes the book will be popular among amateur radio operators, hobbyists, and people interested in outer space. It's the first book to list all the frequencies.

2695. Ottawa, Ont Freq List

Newsgroup: rec.radio.scanner
Date: 1996-02-01 00:00:00 UTC
From: dbowlby@chat.carleton.ca

He is a short list of Ottawa Ontario Frequencies, If you would
like something more specific, Email me.

Ottawa Police (22/23 Div of Ott Carleton Regional Police)
F1 142.095 XJF83
F2 142.485 XJF27
F3 142.725 XJF??
F4 142.995
F5 142.770 (Ontario Prov. police Provincial Common)
F6 139.680 Simplex (Used sometimes By TAC Team)
Note: all frequencies use CTCSS of 151.4Hz. except for F5, the
input frequencies are all 4.02Mhz lower.

Nepean Police
F1 142.770 (OPP Prov Common)
F2 142.335 XJH265 Primary Dispatch Channel
F3 142.425 Secondary Dispatch Channel
Note: All Nepean Freqs use the CTCSS tone of 127.3, and are also
4.02 Mhz lower for the rptr input Freq.

Glouster Police
F1 142.635 Primary dispatch
CTCSS 162.2

Note Due to the Regionalization of tyhe police force some assests
are routinely shared eg. K9 units, etc. the Tactical team is also
dispatched for the whole Ottawa Carleton Region.

Ottawa Carleton Ambulance
OTTC 142.890 Ottawa Common
OTT2 148.210 Ottawa District 2 XMI740
PTAC 149.605 Provincial Tactical XMI774
OTT1 151.370 Ottawa District 1
PCOM 150.100 Provincial Common
Note All Freqs except for PCOM use CTCSS of 118.8hz.

I have a lot more freqs, almost all with their CTCSS tones,
availible if needed

Carlyle Gerde (gerde@gilbreth.ecn.purdue.edu) wrote:
: ap201002 (Steve Thompson) writes:

: I am a stockholder in Tandy and a former manager. Why do you expect advice?
: The same problem is at places like Lowe's and Home Depot hardware stores.
: These places are set up to be self service and value (price) oriented.
: Americans expect to pay least possible yet get the same service that
: they received at department stores. Advice is valuable. It costs time
: and money. My lawyer gives advice at $250/hr. Hardware stores, radio stores
: and such are either going to be expensive and user friendly. Or value oriented
: and like a supermarket.

true advice is expensive, thats why you go to Circuit-city, best buy or other
big electronic retail stores. to get equipment for a lower price.

and for hobbyists such as me, I mail order parts etc to save money (ie caps,
resistors etc)

and for scanner people, amateur radio people A lot of them order via mail
or purchase them from radio equipment shops.

So that leaves radioshack (no advice as stated above) and thier stuff does
carry a premium. so as a stockholder what differentiates (sp) radioshack
in the market? if they offer no advice and they offer no price breaks(which
you get at mailorder,big electronic shops, radio shops) what then does
radio shack offer the customer??

Don't think me heartless, but I watched a R/S employee sell a young lad 10
feet of solid core RG-59 an two 1/4" phone jacks so that he could replace his
Guitar to Amplifier cord.

I tried to inteject with the physical problems of this configuration, but the
arrogant ass blew me off as if I were ignorant. For the sake of
clarification, RG-59 is 75 ohm coax. By specification, it has a solid core.
That basicly means that it is not intended to be moved around alot. Impedance
mismatch? Well, yeah. Not enough to cause damage at the power levels in the
guitar feed, but still a mismatch. Interferance suppresion? It should be
better, providing the kid put it together right. Durability? No way.

Yet another example of the "WISDOM" at Radio Shack!

You know, Mick brings up a good point here. Radio Shack, as far as I'm concerned, really is the best bet if you are looking for that specific transistor or coaxial connector or whatever. You walk in. You know what you want. You grab it. You buy it. You walk out. From that standpoint, it's tough to NOT be happy with RS, because it really is convenient.

Where most people's beef seems to come from is their interface with the sales staff when it comes to buying actual gear, such as radios, TV's, computers, stereo stuff, etc., or trying to return/repair something.

You can go to a 7-11 and buy a quart of milk, a bag of Doritos and get advice on the cheapest 6-pack in the cooler, but don't expect to get a complete nutritional plan from the high school kid behind the counter.

Carlyle, I followed up to your last post about the same thing.
My only question to you is: Does either Lowes or Home Depot have
a catchy sales pitch like "You've got questions, We've got
answers. I personally have never heard anything like this coming
from either store. And again I agree with your post salesdroids
are everywhere, but again if your sales staff doesn't have a
clue, then get rid of or change the slogan. BTW as for Service
Merchandise I have never seen or been into one, so I don't have
any knowledge how well the staff is, so I will not comment.
~==========Carlyle Gerde, 1/31/96==========

2710. BC200XLT Antennas Connection Problem

Newsgroup: rec.radio.scanner
Date: 1996-02-01 00:00:00 UTC
From: rbarile@bbn.com
Message-ID: <4eqluv$sof@info-server.bbn.com>
Source record: 240806

I have a BC200XLT (2 years old) and I have a question about the
antenna connection inside the unit.

Recently I noticed poor reception and it improved when I slightly twisted
the antenna. I also noticed that the socket turns slightly when you twist the
antenna into the socket. I took the unit apart and it is obvious that the
soldier connection is bad.

I seem to recall that this subject came up befoer in this news group.
I don't remember exactly what the best solution was. It seems to me that
soldiering a short lead that will bend and twist would be a good fix.

Does anyone have any sugestions?

: If you need long length recording consider using a HiFi VCR in LP or
: SP mode. I work at ESPN and we use consumer VHS machines to record
: the ESPN Radio programs as an archive log of the actual broadcasts.
: It is cheaper for us to do this than to buy some commercial item. We
: just chuck the machines when they wear out in about a year. I'm
: usually found loitering near the dumpsters.

I have used a good-quality VCR in EP (6-hour) mode for this purpose for
several years and have had no problems at all, even with cheap tapes.
Not only do you get 6 hours of recording time on a cheap tape, you can
also set the thing to record at a certain time. Most HiFi VCR's can
record and play sound only without even having any video input connected.

Yes, cap codes and just about anything else in a pager can be reprogrammed. You need to talk, either to the company that sold or leased you the pager, the company that you intend to use to supply pager service or a pager repair company. Look in the yellow pages. Usually, the only things that cannot easily or inexpensively be changed are the signalling code (GOLAY, POCSAG, FLEX, ERMES) and the frequency on which the pager operates. In the first case, the signalling code is dependent on the type of decoding logic installed on the board, and in the second, the receiver frequency is determined by a crystal and the design of the receiver itself.

> 73... N9NWO

I see where Carlyle is coming from, I really do, and in general I agree.

However, people are not mad at Service Merchandise because:

1) Service Merchandise does not have a non-fulfilling and mildly arrogant
corporate slogan like "You've got questions, we've got answers!"

2) Service Merchandise does not ask you for your last name or phone number
for every blasted thing you buy.

Also, technical specialists in any industry or marketplace almost never generate
DIRECT revenue, but they certainly generate INDIRECT revenue in the form of solving
a customer problem or getting a very technical question answered. I say INDIRECT
revenue because it's the techie who actually knocks down the technical hurdles to a
sale thus allowing the salesperson (salesdroid, whatever) to move ahead and close
the sale or sell more products. If technical specialists did not help an
organization generate revenue in some fashion, then they would not exist.

So it's a Catch-22 for Radio Shack. Although they really need them, they can't
economically hire technical specialists to man their stores. The salesfolks
they DO hire have to fill the role of the technical specialist. Unfortunately,
experience has shown that by and large they fall short (probably not their
fault), thus casting a shadow of techncial and product lack-of-knowledge.
(I about crapped when I read the post about the RS guy selling a construction
foreman Amateur Radio HT's to use on the jobsite!)

Oh well. Whaddaya gonna do.

Mike

Gag...not another Billy croonie !
Just don't corner Bill with a technical question he can't answer
or go questioning his 'expert' advice or catch him in a lie...
He (thinks he) is a master at diverting the context of the discussion
and resorting to insulting namecalling, not unlike a kid....in order
to avoid his looking like he is not the expert he would like to have
you beleive he is (I guess he is an expert to most scanner enthusiasts
who don't have the technical knowledge or resources to go hunting down
scanner mods from BBS', FTP sites or WWW sites.)
He turned the FIDO ScanRadio conference into a commercial support
area for his mod. books... I see he's attempting to capture the
NET audience like he did the FIDO crowd...good thing that the folks who
frequent these galaxies are more capable of sourcing tech. info
on their own.

I just read a message where he insults a fellow for his lack
of proper english (more insults)...in the same paragraph Mr. Bill
spews out verbal diatribe like "Methinks...".

I keep thinking of the line ..."A legend in his own mind !"

Hi Christian,

I don't know what model of scanner you have, but most of the ones at RS use a standard size coaxial power plug for 12 VDC. If yours is like that, go back to the store and ask to see a 270-1533. It is a straight cord with a cigar lighter on one end and a coaxial plug on the other. It is about 5 or 6 feet long. I believe that is the number. I could not find it in the catalog, but I think that is right. I think it sells for $4.49. If that plug doesn't fit, then try a 270-1528. This is a "Coiled Power Cord", pg. 174, and has different size plug adaptors. It is $9.99. Both should be on the same section of pegboard. Hope this helps.

My understanding is that the AR8000 has a ferrite core antenna built in - read
AM broadcast reception. Still havn't gotten the Yupiteru 7100 to do that yet.

Use a VCR with a added twist....

Hook up an old video camera to the VCR and point it at the scanner!

Now you know what freq was active at the time.

You can even put a small "disposable" lcd clock/watch next to the
scanner so you know what time the freq "hit".

[last changed 03-Jan-96]

Changes preceeded by "|". Please e-mail corrections and additions to me.

The latest version of this file can be accessed via anonymous ftp to agora.rdrop.com in /pub/users/billmc/fcc_sources or via my web page at: http://www.rdrop.com/users/billmc

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

If you are interested in purchasing FCC data, you might want to consider forming a co-op of people in your area to share the cost. As far as I can tell, this is legal since the information is in the public domain. However, the software supplied to view or manipulate the data is usually copyrighted and must be purchased separately by each user.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/ (WWW).

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover
| subsets of the US but come with a more powerful database manager and
| provide more detail about each license. Also available is a Ham callsign
| and repeater database CD.

| Spectrum costs $37, and the Ham and Repeater Database is $21. Regional
| CDs are $137 for the first CD, $102 each additional CD ($560 for the
| entire 6 CD set). Data is updated twice a year. PerCon can be reached
| at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com
| (email), or http://www.perconcorp.com (WWW). The Spectrum database can
| be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $10 per volume.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. The report includes a color plot with transmitter sites marked.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Reports are $26 each. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 708-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates sells a PC-based database program called the FCC Frequency Retrieval System V2.x. It comes with FCC data for one state, covering all services and all frequencies. Data is updated approximately
| every six months.

Cost is $35 for the first state and $20 for each additional state. Updates cost $30 per state. (Add $5 for CA, FL, TX, NY.) Quantity discounts available. Fully working shareware copy (FCC215.ZIP) downloadable from their BBS at 360-871-4228 (below 9600) or 360-871-4591 (9600-28.8k). ScanWare Associates can be reached at 360-698-1383 (voice), 360-698-8207 (fax), scanware@sincom.com (e-mail), and http://cutter.sincom.com/~scanware/index.html (WWW).

US SCANNER PUBLICATIONS

Similar in style to Police Call, this series of directories covers ALL radio services between 30 MHz and 2 GHz. Each volume covers one state and costs between $14 and $29, depending on the state. The volume for California is 820 pages. Contact US Scanner publications at 800-890-6999 (voice) or 503-233-5176 (fax).

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

I was watching "Police Story" last night and the detectives were using Motorola HT-220 Handhelds. Some had UHF duckies and others had VHF duckies and they were all able to talk to each other.

What frequency were they using or do they have a special secret type of radio system.

Second.....
Does anybody know what frequency they use on "Hawaii Five-O" when they say "Patch me thru to McGarrett!"

Anybody have freqs for the "A-Team" or "Knight rider"..."Air Wolf"?????

Thank You

They sure do....or comparable ones, anyway. HyGain used to make a
log periodic that was favored by federal agencies. There were
several other manufacturers, as well.

However, if you were to closely scrutinize an FCC site, you will see a
host of antennas, and some will be TV antennas. You might even see a
TV antenna or two mounted in the vertical plane.

I wonder why they would do that? :-)

Works fine for me. Does the little character spin at the bottom-right
of your screen? (/|\-/ etc), this tells you the audio is clocking-over
the rs-232 line, if not, check hardware. You plugged it into the serial
port didn't you? Got a CRO? chech all again, definatley works.

From my experience in car stereo installation, I would say that your problem is ignition spark noise, from the spark plugs or coil. This dubious and elusive problem is pretty tough to solve.
1. Make sure you have heavily shielded spark plug wires, which you can buy at auto parts stores.

2. As with any noise problem, make sure that your scanner's ground lead is securely connected to BARE METAL, (metal that has been scraped or sanded) not a seat bolt or existing screw.

3. I had a similar problem with radiated noise when my car stereo was on; the switching power supplies in the amplifiers were causing birdies on the scanner, where through static you could hear what was playing on CD. What fixed this? I wrapped the entire length of the antenna cable with a thick layer of aluminum foil fastened on by electrical tape. This may be a bit of a hokie solution, but it worked.

I've been using that antenna for about 3-4 months and am very happy with the
increased reception quality. It is true that you have to adjust it for the
particular frequencies you are monitoring.

UPDATE: 2/1/96

This file is for the benefit of all.

(c) 1995 <All Rights Reserved> Bill Cheek-COMMtronics Engineering

This file is for personal use only and may NOT be placed on a
CD-ROM nor any other media that conveys, stores, or transports
for any monetary cost, without expressed permission of the author.
This file can only be given away, absolutely free of charge.

-Bill Cheek-

There is a growing interest in tapping the baseband audio out of various scanners for decoding of a variety of esoteric signals, including CTCSS, SCA, FSK, RTTY, FAX, etc. By and large, such signals cannot be take from TAPE REC jacks, headphone jacks, and EXT SPEAKER jacks because of the voice-band filtering that is done between the signal source and these output jacks.

Therefore, it is necessary to tap the "baseband audio" directly at the output of the discriminator chip for your scanner. The below Table shows a list of scanners, the discriminator chip(s) used in the scanner, circuit symbols of those chips, and three pins of general interest on the chips: RF-Input, Scan Control, and, of course, the baseband audio pin.

Even though your scanner may not be listed, if you can find its discriminator chip, it will be listed with one or more scanners below, the pins of which will be the same for your unlisted scanner! Corrections and additions to this list are requested. See my email and other addresses at the end of this file.

jimbob@acpub.duke.edu (James P. Meyer) wrote:

> Bill Cheek is in the process of attempting a "hostile takeover" of
>the FIDO net "scanradio" echo/conference.

No takeover whatsoever. The old moderator disappeared and left me
holding the bag. Gotta do what I gotta do.......probably including
giving you a Size #13 crosswise.........

> In an attempt to make the FIDO echo look more like USENET, he posted an
> encoded .gif file there. That's bad enough,

No attempt to emulate USENET at all. Just an effort to help the users
there a little more is all. What's "bad enough" about that? YOU sure
as hell don't help anyone.

> but the content of the .gif file was "remarkable" to say the least.
> It appears to be a file that Andy Moss put together to show folks how
> to replace a lithium battery with one of those double-layer memory backup
> capacitors.

Moss didn't specify the type or style of capacitor.

> Evidently Bill doesn't know anything about those caps,

Oh, of course not. I've only been in the technology for 35 years..

> because Andy specified a 4,700 uF cap (4m7) and Bill wrongly assumed
> it was a 4.7 uF cap.

He left a lot of room for doubt. "4m7 uF" without a voltage rating or
a part number could mean a hell of a lot of different things to
different people. A lot of people could seriously degrade their
radios by following that direction. In any case, even a 4700-uF cap
is MUCH too small to replace a 10-yr lithium battery. Moss's file
talked of radios that discharged their lithium batteries too quickly.
THAT is a problem that requires troubleshooting and diagnosis; not
a downgrade design.

Furthermore, there is NO WAY any practical size of capacitor can hold
more energy than a lithium cell. You don't know your capacitors,
Mister Meyer. Nor batteries, for that matter.

> Then Bill went on to add a snide little remark about replacing a
> battery with a cap and how stupid it was and that it would "downgrade" a
> good radio.

And NOW, Mister Meyer, you've turned into a greasy lying snotball.
Here is *exactly* what I added to that graphic:

```
========================================
Ok, now what happens when the
capacitor discharges? And it won't
take all that long for a 4.7-uF cap
to discharge. Then what?
Makes no sense to replace a
battery with a capacitor. Duh?
Why downgrade a perfectly good radio?
This note added 1-26-96 by
Bill Cheek 1:202/731
========================================
```

You didn't DARE talk your line of shit and quote EXACTLY what I said,
now did you? Well, there's what I said, and it speaks for itself.

> Andy and Bill may not play together nice, but Bill sure shot himself
>in the foot on that one.

Did I now? Let the record speak for itself, booger-picker.

> One of the "rules" that Bill has for participation in the FIDO echo
>is that there should be no personal attacks. It looks to me like Bill
>can't abide by his own rules.

Where exactly is the attack? Moss's technical errors and my response
to them is one thing. "Attack" is quite something different. There
was nothing in what I said that can be construed as personal, you low
life, lying, belly-dragging, snot-sucking snake-in-the-grass.

> Oh, the other "rule" is that the moderator is all powerful and can
>*not* be challenged in public.

And you won't deal with me in private now will you?

Ok, so we deal in public. Have it your way, harelip.

> better around 33 mhz, but around 150 - 160 mhz it really sucks. And
> 800 mhz, well..... what 800 mhz.

I agree. I get the same sucky results on anything above VHF High
(generally anything above the 54MHz / 6m ham band).

> I tried playing with different lengths, and it makes a little
> difference. But nowhere near as good as the stock antenna.

Supposedly changing the length shorter makes it better in the
VHF High and UHF ranges, but I also noticed little difference.
This antenna seems to work best when fully extended, if you
accept the fact that it is tuned well at that point only for
VHF Low, and perhaps aircraft too (108-136Mhz). I also gave
up on trying to get 800MHz.

> So I'm wondering if this is typical or if I'm doing something stupid?
> Any ideas?

No, you're OK. I use this antenna on my AR8000 when I want to pick
up anything in the shortwave band (3-30MHz), as well as getting
the best reception in VHF Low. In my opinion, it even works much
better for cordless phones (46-49MHz) than my stock duckie.
I'm glad I have it, and it's relatively cheap.

I couldn't believe it when I was able to pick up WWV on 10MHz
from my second floor, using just that telescoping antenna. My
nice $30 Diamond RH77CA 8-band rubber duckie didn't stand
a chance - just static.

Think like a photographer who has different lenses for different
lighting and situations. You may consider different antennas for
different ranges of frequencies.

All scanner antennas are compromises, just like Instamatic cameras.

I'm sure an electronics repair shop specializing in 2-way radio repair would probably do it and charge you time and materials. Call around to some of your local ham radio stores to get references, or maybe they also can do it for you. The magazine article tells how to go about doing it so they could probably follow that guideline.

I would not take it to RS, even though they do out-of-brand rapair work. I had them fix a blown regulator in my PRO-37 out of warranty, and it came back with the reflective back of the LCD display totally messed up. I took it apart myself and discovered that they had dumped or sprayed some sort of solvent that got between the back of the plastic LCD diffuse reflector and the circuitboard, melting the back of the reflector. Had to repaint the reflector myself and reassemble.

Hello

I use a RS Pro-51 to scan. I'd like to use it in the car around town, but I get a lot of static (not ignition noise) when using in the car. There are two RS antennas I've seen for cars/scanners - the Mag mount and the glass surface mount scanner antennas. Would either of these help me (mostly 800 Mz, some Aviation/150/400 usage)? I don't know a lot about antenna design - it appears that the mag mount might be a Marconi antenna since it requires keeping intact the foil base. (?) The glass mount would mount higher, but the mag is longer. Is either of these better? I figure the mag mount looks like it might be better, I don't know why - after all I'm most interested in 800 and I suppose the length wouldn't be a factor. I do scan 2 meter bands also, tho. Any thoughts on this would be appreciated.

TIA,

I still don't think people get the core of the problem. It is not just Radio Shack. It is all mass marketing. Your go into Lowes or Home Depot and you may get someone who has techical knowledge of plumbing or you may get some kid working his way thru college. Sales droids are everywhere. Technical specialist are expensive and usually do not generate revenue (unless they are a professional - ie lawyer or CPA). Marketing is there to sell, get the product out the door. If you are mad at Radio Shack, why are you not mad at Service Merchandize?

Read my post to ol' Spaghetti Sauce.....ain't no way under the sun a capacitor can hold as much energy as a lithium cell. I'd sure like to see the capacitor that can. The energy stored in a capacitor is:

Joules
or = 0.5(C)(E^2)
watt/seconds

where: C is capacitance, Farads
E is voltage across the capacitor
^2 is (squared)

So Moss's 4700-uF capacitor at 3 volts is:

Ws = 0.5(.0047)(3^2)
= 0.5(.0047)(9)
= 0.021 watt-seconds

Now I just looked up three lithium cells that ranged from capactities of 70-mA/h to 200-mA/h. The 70-mA/h cell is a small one, but let's see about it. If the sucker can produce 70-mA for one hour at 3-volts, then we're looking at a load (R = E/I) of 43 ohms. Power dissipation at those parameters is {(I^2)(R)} or:

(.07)(.07)(43) = .211 watts (per second)

Now we multiply THAT by 3600 seconds in an hour: (70-mA/H)

.211 x 3600 = 758 watt-seconds (Energy in the cell)

Soooooo, if Moss's capacitor holds 0.021 watt-seconds of energy and a tiny lithium cell has 758 watt-seconds, then the capacitor would have to be 36,000 times larger, or (.0047F x 36,000) 169 Farads to equal the energy supply of a lithium cell. A 169 Farad capacitor would be one mother of a capacitor for one thing, but would also DRAIN the NiCd pack in the charging process.

And "they" say I "attacked" Moss. Geezus H. Kriste, Moss attacked his own dern self. And then his three popinjays attacked me claiming I don't know what I'm talking about. Something just doesn't add up.

Now you know why I offer those fools my shorts to eat. :-))

Rgds,

Bill

"Meat?"

"Meat. They're made out of meat."

"Meat?"

"There's no doubt about it. We picked several from different parts of the planet, took them aboard our recon vessels, probed them all the way through. They're completely meat."

"That's impossible. What about the radio signals? The messages to the stars."

"They use the radio waves to talk, but the signals don't come from them. The signals come from machines."

"So who made the machines? That's who we want to contact."

"They made the machines. That's what I'm trying to tell you. Meat made the machines."

"That's ridiculous. How can meat make a machine? You're asking me to believe in sentient meat."

"I'm not asking you, I'm telling you. These creatures are the only sentient race in the sector and they're made out of meat."

"Maybe they're like the Orfolei. You know, a carbon-based intelligence that goes through a meat stage."

"Nope. They're born meat and they die meat. We studied them for several of their life spans, which didn't take too long. Do you have any idea the life span of meat?"

"Spare me. Okay, maybe they're only part meat. You know, like the Weddilei. A meat head with an electron plasma brain inside."

"Nope. We thought of that, since they do have meat heads like the Weddilei. But I told you, we probed them. They're meat all the way through."

"No brain?"

"Oh, there is a brain all right. It's just that the brain is made out of meat!"

"So... what does the thinking?"

"You're not understanding, are you? The brain does the thinking. The meat."

"Thinking meat! You're asking me to believe in thinking meat!"

"Yes, thinking meat! Conscious meat! Loving meat. Dreaming meat. The meat is the whole deal! Are you getting the picture?"

"Omigod. You're serious then. They're made out of meat."

"Finally, Yes. They are indeed made out meat. And they've been trying to get in touch with us for almost a hundred of their years."

"So what does the meat have in mind?"

"First it wants to talk to us. Then I imagine it wants to explore the universe, contact other sentients, swap ideas and information. The usual."

"We're supposed to talk to meat?"

"That's the idea. That's the message they're sending out by radio. 'Hello. Anyone out there? Anyone home?' That sort of thing."

"They actually do talk, then. They use words, ideas, concepts?"

"Oh, yes. Except they do it with meat."

"I thought you just told me they used radio."

"They do, but what do you think is on the radio? Meat sounds. You know how when you slap or flap meat it makes a noise? They talk by flapping their meat at each other. They can even sing by squirting air through their meat."

"Omigod. Singing meat. This is altogether too much. So what do you advise?"

"Officially or unofficially?"

"Both."

"Officially, we are required to contact, welcome, and log in any and all sentient races or multi-beings in the quadrant, without prejudice, fear, or favor. Unofficially, I advise that we erase the records and forget the whole thing."

"I was hoping you would say that."

"It seems harsh, but there is a limit. Do we really want to make contact with meat?"

"I agree one hundred percent. What's there to say?" `Hello, meat. How's it going?' But will this work? How many planets are we dealing with here?"

"Just one. They can travel to other planets in special meat containers, but they can't live on them. And being meat, they only travel through C space. Which limits them to the speed of light and makes the possibility of their ever making contact pretty slim. Infinitesimal, in fact."

"So we just pretend there's no one home in the universe."

"That's it."

"Cruel. But you said it yourself, who wants to meet meat? And the ones who have been aboard our vessels, the ones you have probed? You're sure they won't remember?"

"They'll be considered crackpots if they do. We went into their heads and smoothed out their meat so that we're just a dream to them."

"A dream to meat! How strangely appropriate, that we should be meat's dream."

"And we can mark this sector unoccupied."

"Good. Agreed, officially and unofficially. Case closed. Any others? Anyone interesting on that side of the galaxy?"

"Yes, a rather shy but sweet hydrogen core cluster intelligence in a class nine star in G445 zone. Was in contact two galactic rotations ago, wants to be friendly again."

"They always come around."

"And why not? Imagine how unbearably, how unutterably cold the universe would be if one were all alone."

Get a VLF converter, such as the ones made by Datong or Palomar Engineers,
and put it in the antenna path.

2766. Poor Performance of RS Telescoping Scanner Antenna???

Newsgroup: rec.radio.scanner
Date: 1996-02-01 00:00:00 UTC
From: jwest@pgh.nauticom.net
Message-ID: <DM2uxv.DLD@pgh.nauticom.net>
Source record: 240976

Last night I bought a telescoping whip antenna from Radio Shack. This is the one with the center loading coil and BNC connector.

I tried it out and I'm kinda underwhelmed with it's performance as compared to the stock duckie that came with my PRO46. The thing does better around 33 mhz, but around 150 - 160 mhz it really sucks. And 800 mhz, well..... what 800 mhz.

I tried playing with different lengths, and it makes a little difference. But nowhere near as good as the stock antenna.

So I'm wondering if this is typical or if I'm doing something stupid? Any ideas?

>fix it OK ? I have the same thing on my AR8000, any advice from
>someone who has been there before will be appreciated.

Doug,

I have emailed you with details, but briefly - it is not easy to fix and EEB
says there is no room inside to put a commercial grade BNC with good
lock nut washer. Am therefore having it tightened under warranty and
when it gets back I will glue the BNC to the case and buy a lower stress
whip (comes on and off easier). GROVE repair service did not offer
a fix for this well publicized problem. Does Javiathon have anyting to add
on your side of the ocean?

Well, the subject line says it all... I've got a PC (with sound-in ability), a Macintosh (also with sound-in), and a PRO-51 scanner. What's the easiest or cheapest way to get DTMF decode ability? I have yet to find any of the software I see discussed in the newsgroups. I am not adverse to buying a box, but I'd like to do it all cheap. Hell, had I the plans I could build one. I can habdle a soldering iron as well as the next geek. :)

Thanks in advance.

You could use your car Stereo antenna. Reception isn't too bad. I didn't
want the bother of installing another antenna in the car. I use the
following from Radio Shack:

3-way connector (split the radio antenna) : 12-1313
Male to Male extension (from splitter to radio) : 12-1312
Male to female extension (from splitter to scanner): 12-1312
Motorola to BNC connector (if this the your scanner connector) : 278-117

Actually, if you here it on the METRO frequencies, it means the same as when other agencies put "the marker" on (meaning, emergency radio traffic only.) If SWAT is responding to a situation, or effecting a "felony" traffic stop, the radio control operator says the frequency is "CODE RED"

Scott,

Based on some earlier articles and notes on the AR8000 mailing list, I went ahead and converted to stereo mini-jacks (3/32") on the left hand side of the unit, near the bottom (opposite from the power connecter). I was a little unsure about disasembling a $600 radio that was brand new, but there were no surprises. There is plenty of room inside the case for the jacks, and the wiring must be done carefully, but the connections are all readily accessible when fully disassembled. The radio interfaces fine with my CX12-AR and it's so much easier to hook up, now. Good luck.

I used to be a watchmaker. We used jeweller's rouge to polish watch
crystals. You need to get jeweller's rouge, red, not the stuff
available at the hardware store called rouge as it will not be fine
enough. Get it from a jeweller's supply. You might be able to talk a
watchmaker or jeweller out of a small bit for nothing.

Rub a soft cloth on the rouge, and then rub the cloth on the plastic in
small circles. Its easier with a buffing wheel, but hand rubbing works
just fine.

The February 1996 edition of Ham Radio Online is available at
http://www.accessone.com/~vbook/hronline.htm

New articles are available now and we will be adding 1 to 2 new articles
each week.

Ham Radio Online has up-to-date news about Amateur Radio from around the world,
feature stories, real-time propagation and auroral condition reports, real-time
earthquake and severe weather conditions for emergency communications planning,
online humor section and the Ham Radio Online Library with fully indexed (find
any section with just a mouse click) Part 97 rules and regulations.

And we plan to offer some totally cool new services during the coming month. As
always its free and free of ads.

Thanks to you, we had over 10,000 readers stop by during January!

Please enjoy!

Another drawback of a VCR is limited playback resources. That is,
if I record on a VCR, I have to playback on a VCR. I prefer something
portable, so I can take the machine in the car or to the office to
listen to tapes I have made. I could dub from VCR to standard cassette,
but that's another step (and more time, which I have too little of).

So I'm also interested in testimonials on the "10 hour" recorders.

: station?

Sure. It will tell the angle of incidence in the vertical plane.
However, your antennas are now polarized 90 degrees differently; this
may make the signal weaker.

Ground reflection and scatter could confuse the reading also.

In article <smcintyre-3001962158170001@joltcola.whoi.edu> smcintyre@whoi.edu (Scott A. McIntyre) writes:
>This is probably a very basic physics/engineering question, but how
>exactly is it that a device such as a scanner could conceivable cause
>interference on a plane?
In a nut-shell, the problem with scanners on planes is that they have oscillator circuits in them that behave like very low-powered transmitters. As the scanner scans, the local oscillator generates a carrier on a different frequency for each channel scanned. These carriers may appear on several frequencies at once because the scanner may use mixers and harmonic-rich doublers and tripplers to generate the desired injection frequency so you can't always predict where the crud will fall. My old regency scanner listens to frequencies in the 150MHZ band as well as a few in the 45MHZ region and several in the 440-470MHZ range. The synthesizer manages to generate bursts of carrier on lots of frequencies from 30 to over 800MHZ as it scans.

Airliners use frequencies from below the AM broadcast band up to microwave frequencies. Since stray signals can effect the operation of navigational aids as well as voice communication, the results are unpredictable.

Many modern portable electronic gadgets from cell phones to CD players have clock oscillators in them or actually contain small transmitters and nobody wants the chance of a navigational error which could endanger lives being caused by something that was totally preventable.

The bottom line is simple. DON'T do it. The in-flight telephones and other entertainment equipment on the plane has all been certified by the FAA as safe to use, but anything you might bring on the plane is basically an unknown quantity and nobody wants to run the risk.

>thanx
> Jim

I can't resist: Jim, in keeping with the spirit of the ECPA, all
Radio Shack antennas now have cellular reception
permanently blocked! There is no longer a diode to clip....

We all know that you are only receiving your own cellular radio
and wouldn't dream of violating federal law, much less admit
that here on the newsgroup. ;)

I have both the ICOM and R/S discones and have found that
the performance of the R/S seemed poorer in the 800 - 900 MHz
range. The "fit" of the connector as well as its RF performance
have always been suspect. As a side note, by using RG-59 you are
throwing away about 1/2 (3dB) of your signal in line loss. You also
have mismatch due to the impedence of 75 ohms. Some folks claim that
impedence mismatches only count when you are transmitting and that a
scanners front end isn't a truly resistive 50 ohms. I will counter
that they are simply advancing an incorrect arguement because their
wallet won't open wide enough to spring for BELDEN 9913 and the proper
connectors. (Oh boy, the flames are-a-coming!) Insults aside, If you
are trying to recieve a high power transmitter that is nearby, any old
cable will work. If you are trying to pick up body wires or perhaps a
cellular handheld's transmitter, you had better pay attention to
antenna VSWR, cable losses, and receiver front end performance if you
expect a weak signal to make it past all of the RF "speed bumps" you
are introducing by using inferior cable, connectors, and antennas.

I would check out your BNC to PL-259 adaptor also. In mentioning the
"twist" in your saga, is the improvement in receive performance only

occuring at cellular. Is the performance on other frequency ranges improved over your rubber duck test antenna? When you mentioned that the antenna was "grounded", is that because you are providing a local "earth" ground to the antenna mast? Are the driven elements becoming inadvertently grounded?

Good Luck!

Jim

In article <ghansen.592.310C5B93@accessone.com>, ghansen@accessone.com (Glenn Hansen) wrote:

[Hansen drivel deleted in the interest of the public's well being]

Try this the next time you want to have some laughs: See what tripe Glenn Hansen posts in the various newsgroups that he hangs out in. Go to Digital's fabulous new search engine at www.netscape.com and enter "Glenn Hansen" or "ghansen@accessone.com" In less than 30 seconds, you'll see all of his Internet posts in the past month!

Old Hansenobody, who happens to live in a Neilton, Wash. trailer park, thinks he's knowledgeable about automobiles, Seattle nightlife, culture and of course, radios. One thing that you'll notice right off is that Glennidiot regularly posts his crass comments in a variety of places, not just here where he is known to suck up to everyone who happens to make comments that he finds agreeable. You'll also notice that Glennidiot has never posted in any newsgroup a single worthwhile comment on any subject that he purports to know about. That's right: Glennidiot is a friggin' phony whose intelligence is on par with that of an eraser. The best he can manage to do is spout crap, always in response to something someone else has said.

Look around, you will find:
-- not a single cogent comment;
-- not a single original observation;
-- not a single offer to provide a bit of info to someone in need;
-- not a single shred of intelligent spark; and Lord knows,
-- not a single witty remark.

Ain't that so Glennie boy? When have you ever posted an interesting article here? When have you ever helped someone out with a mod? When did you ever provide a lousy freq or two? Answer: Never. You're an obvious, get-a-life loser interested in sucking but never contributing, ain't that right?

Best Hansenobody can do is hide behind a keyboard and make rude remarks to people he knows he'll never have to meet on a city street or on a country road. Hansenobody is a low-life illiterate, and even his own mother tell you that.

2784. Cleveland Metro Police Cruiser Numbering

Newsgroup: rec.radio.scanner
Date: 1996-02-02 00:00:00 UTC
From: sdougla@bgsuvax.bgsu.edu
Message-ID: <sdougla.823253799@bgsuvax.bgsu.edu>
Source record: 240828
Cross-posted to: alt.radio.scanner,rec.radio.scanner

This is an idea I came across while sitting here at work...

I am a bit new to the Cleveland Metropolitan area, and since I came here I have been jotting down the numbers of the police cruiser I observe in various suburbs to get a feel for what department I here on a commonly used frequency or two. Maybe somebody knows for sure, but thus far, I have observed the following cruiser numbers, and the important part is the first two digits:

18xx Brecksville PD 52xx North Olmsted PD
19xx Broadview Heights PD 55xx Oakwood Village PD
33xx Fairview Park PD 61xx Parma Heights PD
39xx Independence PD 68xx Solon PD
48xx Middleburg Heights PD 77xx Westlake PD

The further observation that I made is that both columns of this list are in order numerically and alphabetically, respectively. My hypothesis is this: Cuyahoga County has an agreement with the inherent municipalities to be assigned a two-digit municipality number, which would be prefixed to any further two-digit (or more) unit number for the maintenance of radio traffic and mutual aid situations, and these are done alphabetically with assigned numbers beginning somewhere higher than 01 so that the county can insert it's own law enforcement divsions. This could be similar to the way Ohio County Sheriff's Offices have been numbered alphabetically by county name.

Maybe I am totally off my rocker, but if this is true, and some kind soul out there has a complete list for Cuyahoga and surrounding counties, I would greatly appreciate having a copy of this information emailed to me.

Also, there are always exceptions to the hypothesis...

Parma, North Royalton, Strongsville, Brookpark and Lakewood cruisers have all been observed to not follow this format.

Thanx in advance,

The Impedance doesn't really matter unless you are transmitting.Sure,if you can afford it,there are cables that are 50 ohm and have lower loss than RG6,but for the money,it works good,is cheap,lasts a good amount of time,and you don't have to go to a radio store,or go to a hamfest,or call on the phone and wait to buy it.As far as money/performance goes,it's hard to beat..

A pl-tone entry feature that allows you to enter the tone used by police, fire and emergency crews; and if no tone is used it [the scanner] will accept 0.0 as the entry, therefore allowing other "signals" to come in that are not part of your programming choices. For example "Amelia County Sheriff's Office uses 123.0 on 39.240 MHz. Enter 39.240 as the frequency ; when the pl tone is requested, enter 123.0 as the entry and press the "Enter" and the only signal that you will hear will be Amelia County Sheriff's Office on 39.240 MHz using a pl-tone of 123.0
There you have it. A typical example of what I would like to see in future Uniden Bearcat scanners :Base, Mobile and Handheld scanners

In article <4ek0ti$7op@mozo.cc.purdue.edu> Carlyle Gerde wrote:
>I am a stockholder in Tandy and a former manager. Why do you
expect
> advice?

Some people expect advice because RS advertises that they will
provide it. Remember, "you have questions, we have answers?"

>The same problem is at places like Lowe's and Home Depot hardware
stores.

Keep in mind that Lowes, etc. hires clerks. RS supposedly hires
salespersons. That implies that someone can tell you the value of
the product so you will buy it.

>These places are set up to be self service and value (price)
oriented.

Ask Tandy if RS is supposed to be self service. I think they will
correct this misinterpretation.

>Americans expect to pay least possible yet get the same service
that
>they received at department stores. Advice is valuable. It costs
time
>and money. My lawyer gives advice at $250/hr. Hardware stores,
radio
> stores

That is exactly the problem. RS is not the lowest price vendor.
Therefore the average person coming in may expect more for paying a
premium price.

>and such are either going to be expensive and user friendly. Or
value
> oriented
>and like a supermarket.

> A source to find a manual would be nice too.

My Dad has a 200xlt, and he's 140 miles away, but I'm pretty sure this
will work:

1. Hit "manual" to stop the scan.
2. Type in one limit for the search and hit "Limit"
3. Type in the other limit and hit "Limit"
4. Hit search.

You can stop the search at any time by hitting "hold." Then, I believe
that you can step up one freq. with "hold" and down one step with "limit."

If you have any more questions, let me know and I'll try to help.

Jim

I have several problems with RS. First, the quality of many products is very marginal and the prices are very high in relation to name brand, quality manufactured products.

Second, I am sick and tired of going into the stores and they do not have the merchandise. They always want to sell you the floor model and I will not buy a display unless it is for sale at half of the regular price. Heck it is a used piece of equipment.

I worked for RS 20 years ago. We never had sale merchandise then, and they still don't have the stuff today.

Next is the repack of returns. I don't want someone else's problems. If someone used and returned something, don't sell it to me at full, regular price. I can always tell a repack and encounter repacks very frequently at RS.

Forget the unknowledgeable people, I can figure the stuff out myself. They will never have quality people staffing their stores until they decide to pay a living wage. Although it was a fari place to work when I was going through school.

Duffy

I had one a while back and it wasn't all that bad a radio. It wasn't as sensitive as my PRO-2006 (on FM), but worked reasonably well. It was, however, MUCH more sensitive on the airband (AM) than any of the other three scanners I tried! I did not have an opportunity to test it for intermod, so I can't give you any advice in that area. Also, there is a real simple cell mod, which may make it desirable from an investment standpoint. Plug it in and turn it on. If it works, I'd buy it...

The window mount seems to work quite well. The only dislike I have is
the apparent directionality caused by mounting it on a window. I have
mine center mounted at the top of the windshield. I seem to get much
stronger siganls from the rear 180 degrees. Possible cause is a lack
of ground plane for the front 180. Center mounting on the roof of the
car would be ideal from a ground plane point of view. Of course some
one out there will argue that ground planes dont matter for a
"Receive" antenna. I tend to disagree.

2807. Re: AR8000, Grove, and 800 mhz?

Newsgroup: rec.radio.scanner

Actually, it is merely a software adjustment to the band-plan in the EPROM. Can be done with ScanCat or ScanStar Software as well as others probably. Groves' mistake may be in "advertising this" as this may perturb the FCC into not certifying anymore scanner imports that use soft band-plans. The FCC could force manufacturers into placing the band plan on a specific ROM.

I have ScanStar 5.68, the CX12AR and the AR8000K. I would like to use the tape relay in the CX12AR to control a tape recorder. Has anyone out there hacked the values needed for the Alarm function in ScanStar which allows control of the tape relay in the CX12AR? The relay is controlled by the DTR line of the COMx port that the CX12AR is hooked up to.

While on this topic. I have a question for those of you who live in the Washington DC area. Have any of you ever picked up Dana Scully on her cordless phone? Or even better yet her and Moulder discussing a case on their Cellulars? If you pick up one of their conversations, you could follow them on a case, and perhaps have a small TV appearance on the X-files.

I am looking for freqs in Northern Virginia (Fairfax)

I have the Police Call 96' and have checked the PerCon DB.
In particular I am in search of the freqs that Police and Fire
personel switch to after the call has been dispatched. I pickup
lots of dispatch traffic but loose them when the "switch to fire
channel 3" or "Go to medic channel 5".

I have used the trucked freqs from POlice Call 96' and PerCon only
to find some cell calls and some plumbers talking between jobs.

Thanks

Wayne.

: Maybe I'm being dumb here, but I don't understand the difference. Whoever
: recorded the call between the wife and the hitman was illegally monitoring
: a private call. I don't see why it makes a difference whether it was a
: cellular phone or cordless phone she was using.

Nope. The evidence could be used in court. Only the police are restricted
from obtaining such evidence themselves.

Another example. You could break into a neighbor's house, find that he/she
was poaching deer, and inform the police. The police could obtain a search
warrant, based on your illegally obtained information, and search the
house. They could then arrest the person based on what they found.

Note that this is different than the police breaking into the house
themselves, without a warrant.

Could you be prosecuted for the illegal breakin? Certainly, but it would
probably not happen.

: Isn't using the scanner to listen to the cordless transmissions the same
: as tapping the land wire?

Maybe. I do not recall just how the ammendment was written. However, how
are they going to detect your listening? And, if you tell them about an
illegal act - do you think they are going to get the Feds to file charges
against you?

This is in reference to the gentleman that posted that he was a former store manager for Radio Shack, I believe he asked why folks expect advice from the sales people and that Radio Shack provided reduced prices at the cost of technical service:
That is a crock. Radio Shack is NOT in the least inexpensive. They are very high priced compared to a LOT of other stores that provide the same and similar products. If they dont want to offer advice then they shouldnt advertise with the slogan "Youve got questions, weve got answers". The thing about Radio Shack is that they have a lot of stores worldwide and know that they can get away with higher prices and poorer service, much the same way that Mc Donalds seems to be these days. B.

Ah yes. And while this is true, if you would like the squelch function as in using the CX12AR interface, you might want to put in that other jack. You can fit 2 in there on the lower left, front portion of the chassis (nearest the 2 arrow keys). I used some enclosed jacks from Radio Shmuck. I think they were #274-249 on page 80 but I'm not sure. The drawback is that these jacks, while enclosed, are not air-tight and the case "breaths". So I avoid large temp changes. If I had it all to do over I would search out some sealed 1/8th inch jacks!

>
>So I'm wondering if this is typical or if I'm doing something stupid?
>Any ideas?
>

I just purchased the antenna about 3 weeks ago. It has opened up the
frequencies from 30 - 54 Mhz. I never heard anything on my Pro-37 using
the rubber ducky in this range. I now hear police, fire and 6-meter hams.
I also hear personal communications ;') up to 1/4 mile away.

I have no trouble with 800 Mhz or other frequencies - just adjust the
length as shown in the instructions. I've used it (with a pigtail) to
transmit on my 2-meter HT with good results.

I have to be more careful with the scanner and the antenna. The antenna
does not seem to be made as strong as others - I'm wondering how long
it will hold up with daily use. Mine seems to wiggle more since
I bought it.

> Can anyone help?

Ok, here's a repost of an SCA decoder. Before someone flames me
again for how complex the circuit is, 1) it isn't that complex, it
just looks that way because I dislike ASCII schematics and 2)
it receives all of the sca subcarriers from 62 to 95 Khz unlike one
based on a PLL with a fixed band pass circuit.

I recommend the Mc3361 as a replacement for the Mc3359 since the
Mc3361 has reached jellybean status and is available from three
suppliers (Motorola, Signetics, and Samsung). If you have enough
experience to build the circuit, you should be able to do the
substition using the suggested circuits in the Motorola (or Signetics
Linear - Communications) data books.

start of old posting ----

Here is a description of an SCA decoder using the Motorola Mc3359
Low Power Narrowband FM IF integrated circuit.

What is SCA

SCA or Subsidiary Communications Authorization is a method
of piggybacking signals on the normal audio programming from FM
Broadcast stations. Normally, the audio program occupies
the frequencies (after FM detection) from 0 to 15 Khz, there
is a 19 Khz pilot tone for stereo, then the Double Sideband
Supressed Carrier Stereo Difference signal takes 38 Khz +/- 15 Khz.
There is room above all that for other signals, using the range
60 to around 100 Khz. About the only limitation the FCC places
on the signal is how much the SCA signals modulate the main RF
carrier. Monophonic FM stations can use subcarriers in the range
of 20 to 100 Khz.

The usual audio signals are narrowband FM subcarriers with a
deviation of +/- 5 Khz. Common subcarrier frequencies are 67, 75, and
92 Khz.

There are also FSK and PSK data subcarriers for such uses as
stock market tickertapes and paging.

Content, Property Rights and ECPA

The signals can be used for whatever the station can
get money for. Talking newspapers for the blind, "Muzak", and
ethnic programming are signals I've monitored in my area.

These are not considered public broadcasts, and are covered
under some form of copyright or performance right. There is some
question that the Electronic Communications Privacy Act may disallow
listening to SCA signals. So don't try to go into competition with
the program providers, because they are the ones collecting the
subscription payments and the law is on their side.

Theory of Operation

The Mc3359 is one of several similar chips designed to
be the second IF for a narrowband FM receiver. It has a local
oscillator, a balanced mixer, a limiting IF amplifier, a FM
quadrature detector. Also included is an OP amp, and a squelch/
mute circuit which is not used. It is documented in Motorola's
Linear and Interface Integrated Circuits databook (DL128).
The specifications state that it produces a useful audio signal
with an input of around 10 microvolts. (Quite a change from
logic thresholds for this digital hacker.)

In this case, the signal is obtained from the output of the FM
detector inside a FM tuner. The input resistor (R1) is large to prevent
loading down the tuner's circuitry. Then a parallel LC tuned circuit
(C1,C2,L1) selects the desired subcarrier. The Local Osc. frequency
is set by L2, C4 and C5. This should be in the range of 388 (455 - 67)
Khz to 363 (455 - 92) Khz. The output of the mixer is filtered by a
three terminal ceramic bandpass filter, X1, (Not a ceramic resonater
used for oscillators). The limiter input (the output of the filter) is the
pin most senstive to spurious signal pickup. Keep that wire short.
The limiter output is processed through a quadrature detector, a balanced

mixer combined with a tuned circuit (L3 with an internal capacitor),
to produce the audio frequency signal, deemphasized and filtered by
R3, c11, c12, r4, etc.

Parts

First try the nearest Motorola distributor. I got the IC
at a local (Seattle area) retailer called Supertronix. (Sort of
a local "Radio Shack on Steroids" with a large selection
(206) 251-8484).
It's also in the NTE (and ECG) inventory as a NTE-860 ($$$ warning).
A Mc3357 is similar, but requires more external parts.

The inductors and bandpass filter are available from DIGI-KEY.
I haven't yet tried the Toko 154ANS-T1020Z for L2, should work. ;-)
The J. W. Miller 9001 is a big ugly wide range thing.

Adjustment

First, power the circuit up with no input signal, 4 to
9 volts, 3 mA. Hook the audio output up to your amplifer (about
.5 V signal). With a DC voltmeter or 'scope across C11, adjust L3
across it's range. At one end, the voltage should be about .5 V DC,
at the other end the voltage should be about 1 volt below the power
voltage. The transition should be abrupt. In the transition area,
adjust L3 so the voltage is halfway between the two extremes. This
should be the point for the loudest output of random noise.

If you have a frequency counter, scope, or LF receiver, look
at pin 2 and adjust L2 for the subcarrier you want to try first. 388
Khz is a good bet. With L3 adjusted, it really isn't that critical.

Hook the input to the FM detector output inside your FM receiver/tuner.
(You'll have to figure this out yourself), and tune to the station
with a SCA subcarrier. Quality of reception is important. If the
normal broadcast audio isn't clear, the subcarriers will be drown out
by noise and distortion. Tune L2, when a signal is there, you'll get
a quiet output, or hear the music.

Even with L1 misadjusted, the the chip is sensitive enough to pick the
subcarrier up. Adjust L1 for the lowest extraneous noise.
Alternatively, you can hook an audio oscillator to the input, instead of
the FM receiver, set to 67 (or whatever) Khz, .1 to .5 Volt, look at pin 18,
and tune L1 for a peak AC voltage.

Performance

There is still a lot of crud in the audio, but it's good enough to tell
you what's out there. (Most SCA signals use some sort of compression
to reduce noise, which this circuit doesn't do.)

Thats true, not gossip. Just drive by their monitoring station in
Cerritos. You can see them from the freeway. Good quality concentric
towers and helical coax lines too.
You dont see any cheap TV ANTENNAS for their monitor posts.
P.S They are mounted vertically polarized, so it is real easy to see
what model of Create antenna they are using.

try the red, blue and green dot frequerncies... These are non exclusive,
and very easy to license.

2832. Possible cellular mods on CPU-blocked scanners?

Newsgroup: rec.radio.scanner
Date: 1996-02-02 00:00:00 UTC
From: thharrel@cs.nmsu.edu
Message-ID: <4es2qq$2n3@bubba.NMSU.Edu>
Source record: 240876
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I was doing some thinking this evening, about the state of the world in general and cell-blocked scanners in particular. We all know about the ECPA, and how scanner manufacturers have "blocked out" the channels in the CPU. It would seem that Uniden, GRE, etc., are thinking that just disallowing users from being able to input cellular frequencies is sufficient to keep them from scanning those ranges, since how can you scan a range you can't input? Look at the 7A4 PRO-51. You couldn't directly input a cellular frequency, because it wouldn't let you. However, sticking that puppy in test mode would fill one of the memory locations with a cell frequency, which the scanner would then happily search from.

This got me to thinking - what about bypassing the CPU and programming the EEPROM directly? What I'm thinking about is a device that would be wired to the relevant EEPROM pins (mundane stuff like the ENABLE, DATA IN, CLOCK pins) and would directly write a frequency into a memory location. After directly accessing the EEPROM, you'd turn on the scanner, and it'd happily search from that stored frequency, not knowing (or caring) where it came from. You could store channels and frequency data in a computer, then shove that information down a serial line. The device would translate the RS-232 data into TTL-compatible (or whatever the memory chip needs) signals for EEPROM programming. The EEPROM doesn't know that it's not the CPU programming it, and when you fire up the scanner, the CPU won't know that it wasn't the one that programmed the EEPROM.

Now I know that this would probably break the ECPA provision about having a combination of a computer, a scanner, and an EPROM burner or other device with intent to do this. I'm just theorizing about the possibility of something like this being workable. Obviously, this would only work with scanners with external memory chips (such as the PRO-43).

Anybody care to comment?

Come on guys!! I am still looking for a DDI that will work with AMPS!

Anything that will control a cell phone and or scanner!! Include the mods for the phone!

I know someone must have written new software or modified Celltracker!!??

I do not have the knowledge to do this, nor do I have time to learn this. I spend most of my time installing alarms in cars, houses, and stores. Due to the temp in Winnipeg Manitoba Canada -41c with a wind chill of 2300 remote car starters have been a big hit. -41c+ in the winter and last summer we had +40c that is CRAZY! Last summer it was hotter at night most of the time than LA was in the day.

Peace from Frozen Canada. And to all you guys in the deep South,

TAKE OFF EH!

Mmm...not sure if I'm half Company half man now :-)

The loose BNC "problem" was a little more apparent on early versions - we had a few customers come back to us about it. AOR said they addressed the problem and in the last 12/18 months or so I cannot recall any direct customer complaints re loose BNC connectors.

Its only in recent weeks and on threads here on r.r.s that this "problem" seems to have appeared - the chances of this "problem" is probably increased for those who change antennas on a regular basis.

To tighten the lock nut is not too difficult but be careful and don't attempt brain suggery with a broken bottle - make sure you have the correct tools. Dissasemble the AR8000 by removing the two screws in the battery compartment and the two small black srews on the side (just the front half will do). Split the radio in half placing the front half to one side.

Remove the three rubber kobs from the top and the three locking nuts around the On/Off, Squelch and Rotary Dial. These (the locking nuts) are probably the hardest things to remove as they are "down the hole". If you do not have a specific tool a pair of fine tipped long nose pliers should be OK.

Remove the two screws at the bottom of the top circuit board. About on third of the way up on either side of the board close to the edge are two white connector blocks labled J4-1 & J4-2. You will see though the innermost "hole" the leg of the battery contacts slighlty bent over. This board will lift out but be careful the two battery contacts - to make life easier you could just straighten them slightly.

The lower board and BNC connector should now be visible and allow access to the locking nut. By removing the three retaining screws on the bottom board you can also lift this board away together with the top plastic section and BNC socket from the bottom case which may also make life a little easier. Again a pair of small long nosed pliers should allow you to tighten the locking nut quite easily. If you consider adding some form of adhesive I would suggest using some specific Adhesive designed for use with threaded fasteners.

Re-assmeble being careful to ensure the two battery contacts are located
correctly in the two connector blocks. You may wish to bend the end over
slightly just to stop them "falling" out when changing batteries.

Jonathon,

Thanks for the very detailed (and daunting) advice on the BNC

>Its only in recent weeks and on threads here on r.r.s that this
>"problem" seems to have appeared - the chances of this "problem" is probably
>increased for those who change antennas on a regular basis.

Given the wide freq range of this receiver I would have expected AOR to make
a sturdier BNC - as one must change antennas to take full advantage of the
radio. I regularly change antennas on a Bearcat 200xlt and a Yaesu FT530 and
after years, the BNC have shown no problem.

In your opinion would there be room to fit a sturdier BNC with actual lock
washer into the space of the current BNC?

regards,

==========
I'm not a Tandy stockholder, but...
What does Radio Shack offer? Well, they must offer something. here in the Phoenix area, they don't seem to be suffering from a lack of customers.

Go to a Radio Shack. Right off the bat, you should notice something: they are everywhere. Even Moosebreath, Montana, has a Radio Shack. Tey that with your big electronic shops. I have at least 3 Radio Shacks within a 3 mile radius of my house.
Now go inside. Notice that? If it's portable and even remotely electronic, it's there. The merchandise extends from Flavoradios to some of the best scanners on the market. Truly a varied offering. There's something there for everybody, from 4-year-old Tommy to Grandma. This is *not* a speciality store.
Remembering that, if you start asking questions on a topic that you are very familiar with, say, scanners, why do you expect that clerk to have it as *his* speciality, too? Maybe car stereos are his speciality, and he knows dick about scanners. Does that make Radio Shack a bad place? ANd, what if scanners *are* his speciality. The car audio guy is going to say "Radio Shack sucks, man. All they know about is scanners!"

There is no way a store like Radio Shack can afford to put personell in there who are experts in everything from telephones to stereos to scanners to antennas to calculators to test equipment to R/C toys, and more. It just can't happen.

Well, someone on here is very misinformed about how much communications hams do provide as a public service. They have evidently NEVER monitored the HF hurricane nets that are almost constantly busy during hurricane season here in N. America, they have NEVER monitored communications provided by local ham operators during such events as the Avianca air crash some years ago, they have NEVER monitored RACES communications during bad weather, in which hams tend to put their lives on the line to go out and confirm a report of a possible tornado or hail, and last but not least, they have NEVER monitored efforts put forth such as those put forth by the amateur radio operators during the first critical hours of the search for Amber Haggerman. Now, should I go on? I really dont think I need to. B.

True, the FCC doesn't use "cheap" antennas. Why should they? It's *OUR*
money they use to buy their antennas.
On reading this group, I find that a *lot* of people here are asking for
help with doing things in such a fashion that I understand that they do
not have any governmental funding behind them. In a case like that, a $50
TV antenna that performs almost as well as a $250+ antenna looks *very*
good. Personally, I doubt that the extra $200 would be cost effective.

They do not use the same circuit.
I think the MT cable includes a loopback to ensure you are using their
cable. I've tried a WEFAX and a few other generic decoders, and they all
give the message that the cable is missing or not working.

Here's another:
I was in a RS one day when a lady made some inquiries about radar
detectors. She asked if a radar detector could be modified to detect the
(then) new laser speed guns.
Sure, said the clerk. They do it all the time. I pointed out to the lady
that this was not true, that radar and lasers use entirely different
technologies, not to mention different transmitted media, and the clerk
got mad, and told me that he ought to know, after all, *he* worked at
Radio Shack!
I told the lady that that was no guarantee, and left.

I'm a little bit late noting this post but as I at home browsing through
the group I thought I'd add to the above.

The AR8000 is easy to dissassemble / assemeble providing you have
the correct tools. A good set of small screwdrivers and a pair of long
nosed pliers will suffice.

If you are going to dissassmble the AR8000 IT IS ESSENTIAL to remove the
three rubber knobs on the top and the THREE LOCKING NUTS that secure
these in place. They are not "glued" in place or anything similar with
any form of "cement". Removing the locking nuts will allow the board with
the rotary dial/on/off and squelch controls be removed easily.

Removing this board will allow considerable easier access to the BNC
connection.

CB folks aren't the only ones who are idiots when it comes to radio usage. I do traffic control for the Michigan State University Police during special events. The University hires people to sell spaces in University lots, and gives them all police radios. The other night, parking enforcement was calling for a wrecker, and the driver of the car was upset. While they were waiting for a reply from dispatch, you hear some of these MSU Parking people strat asking about an event that would be going on the following night, and how much it was going to cost, etc. This "enforcer" who is as student, could have been getting the hell beat out of them and these people are chit-chatting.

A demo of AOR PC-MANAGER for Windows is now available on the Internet. This is a full function RS-232 control package for the AOR AR8000 and AR2700 scanners.

The demo is a fully working version which has file save options disabled and will run for periods of ten minutes.

You can download a copy in a zipped archive format (about 846kb) from my home page (URL is in my sig) or direct from the following ftp site:

ftp://ftp.demon.co.uk/pub/ham/scanners/pc-manag.zip

Demos of AOR Searchlight (for the AR3000A) and Concerto (for the AR3030) are also available.

> joshtu@ksu.ksu.edu
> KB0GUS
>

Josh,

Here are a few tips that I use for trunked radio monitoring:

1. Find all of the frequencies in the trunking group and enter them
in your scanner.

2. Do not use the delay function on any of the channels above.

3. Lock out the data channel (identified by a constant buzzing sound)
This channel may change daily, so remember to unlock the one used
the prior day.

4. Select the fastest speed available.

This method is the best so far as I know until there is a device to
read the trunking data channel and follow the conversation.

The above method works well, except when the system gets crowded.

Try to find out what trunking system is being used. There are 3 main
systems currently: Motorola, GE-Errikson, and LTR (EF Johnson).
The GE system is identified by the "We bring good life" tones at the
end of each transmission. Commtronics Engineering has a device to
eliminate these tones from the trans, allowing the scanner to resume.
Bill Cheek is the owner of the company and he is a regular in this
newsgroup. In addition, a company called Connect Systems
in Ventura Ca, has a device to display uers of an LTR system.

There is no Motorola or GE device to allow proper tracking, that I
know currently.

If you need any clarifications or have more questions,
feel free to email me.

When using the Rs telescoping ant in the 108-200 mhz range you want to have the ant totally extended EXCEPT for the section just above the coil. This should be collapsed. You will find that it is outstanding on HAM and aircraft signals using this configuration.

For low band work...have it completely extended.

>Anyone ever run into something like this before?

You are hearing a voice paging system... Old fashion - but, they DO exist. The frequency you mention is an RCC frequency used for mobile radio-phones operated through the operators of a telephone answering exchange and carry radio - telepphone links. Exactly what you heard and how your above mentioned system works depends. You may have heard them page to a pager only, into a moble units reciver or ???? Smoe of the techs or the owners of these facilities are willing to give general information about their system as long as you approach them in a friendly level headed manor. (And do not come off as a wierdo, but a curious scanner listener.)

The trick with this RS antenna is that when you listen to anything
above around 50MHz, you extend the whole thing, and then retract only the one
segment which is just above the center coil. That should get you
excellent performance. Works for me, and I have also seen other people
mention this here before. Good luck.

Mike.

Hi Steve,

I'm here in Campbell on business for 2 weeks, and found Campbell PD
on the Following:

Primary 482.4625
Secondary 482.3375
Wireless Mic 170.245 - used when offices arrives to
record the incident with a
video camera in the cruiser.

San Jose PD can be found on the Following:

Channel 1 460.200 northest
Channel 2 460.325 northwest
Channel 3 460.425 east
Channel 4 460.475 southwest
Channel 5 460.400 central
Channel 6 460.525 southeast
Channel 7 460.025 tactical
Channel 8 460.100 citywide (car to car)

If you find any WEB sites or Frequencies list for the San Jose area,
can you also send them to me?

Thanks,
Bob

2869. Chicago Frequencies For Cold Snap

That's fine. I don't care which ones you are considering...
Okay, I do care but I'd REALLY like to see a consolodated list
of features that you were given so that we can all think about
them. You do realize that seeing this list will make us all
think about the features more and maybe help you refine your
choices better.

2882. Re: AR8000 Computer Interface Mod

Newsgroup: rec.radio.scanner
Date: 1996-02-03 00:00:00 UTC
From: RR <riecks@tds.com>
Message-ID: <4euc6j$mum@voyager.ff.tds.com>
Source record: 240891

I too recently did the mod using regular 1/8" stereo jack. I put it on the left side of the radio, since the 3/32" jack for the SCOUT is on the right under the power connector. No problem fitting the jack in the case at all.

The new jack provides the Transmit, receive, and ground, while the 3/32" jack for the SCOUT only does Receive and ground. The 1/8" jack works well with the cables supplied with the CX12AR interface. Just lug it in and go! Of couse, it lacks the squelch output and a few of the other pins, which aren't really important to me right now anyway.

What I was curious about was if anyone had been able to fit another kind of connector, like a 6 or 7-pin mini-DIN, into the radio for this purpose? I didn't have one, so I couldn't try it, but it seems like a good idea, if it fits.

The flat cable thing is a mess, if you ask me... this mechanism works MUCH better and it doesn't feel like you're about to break anything, though the little 1/8" stero jacks from RS seem a little dainty. I hope to replace it with a sturdier one in the future.

But it works! Works great!!

2884. Re: AR8000 Computer Interface Mod

Newsgroup: rec.radio.scanner
Date: 1996-02-03 00:00:00 UTC
From: Jim Dantin <Jadantin@uky.campus.mci.net>
Message-ID: <31136938.5CEC@uky.campus.mci.net>
Source record: 240893

I'd like to hear from other AR8000 computer interface users on the subject of software - what are you using to communicate with the AR8000? There's a few commercial packages that seem like overkill for simple memory dump and restore functions, while Windows Terminal or some other communications package seems a little too primative.

Does anyone have a package that seems to be targeted at uploading and downloading without all the frequency database functions?

As an historical note, the Microsoft Access database that I developed and had posted on Vic Healy's Web page could really use a module to do the communications with the radio. I have not made any significant improvements in the database since it was posted. The database is freeware and will stay that way, so any communication modules must be freeware also.

I looked into writing the module in Access Basic, but really don't have the time or experience. Any help from interested parties would be appreciated.

Uniden wants to thank everyone who participated in our recent survey to determine what features you would like to see in future scanner designs.

On January 31, we met with the new products and the engineering departments at Uniden in Ft. Worth and presented all of the ideas that you submitted. The six, or so, most commonly requested features were discussed and very well recieved. They must still survive engineering cost evaluation, marketing acceptance, legal review, etc. However, I believe that you will see all or most of them in new models that will be out later this year.

Please do not leave E-Mail asking which features are being considered as we are not at liberty to say at this time, but as Uniden firms up designs and permits us to reveal this information, you will be the first to know.

From: Peter Kamilakis <pnk@concentric.net>
Message-ID: <4eus09$mid@spectator.cris.com>
Source record: 240896

I tune into an interesting frequency sometimes on my
scanner, and I cannot quite figure out what it is.
It occurs at 152.150, and what happens is I hear two tones
(like rescue tones), followed by what sounds like someone
talking on an answering machine, saying something like
"Bob, call home when you get a chance". This is not a
front end overload from another frequency, because it is
crystal clear. I am clueless as to what this could be,
although I suspect that is some kind of paging thing.
Anyone ever run into something like this before?

pnk

The keypad and display are exposed without an plastic covering. Some
may prefer the plastic; I don't. I also have an AOR AR1000 that came
with a case which had the plastic covering. Over time the plastic
yellowed and became scratched. The plastic also made the display
difficult to view at times due to glare and reflected light.

Not sure if I follow you there, but tighten the BNC connector so that
it does not move, and then resolder the connections.

I have two problems with Rat Shack:

First - if you manage to find someone (such as a Manager) who has any idea of what's going on - six months later "they" (i.e. the upper echelon) transfer that person to another store....

Second - when was the last time you saw an actual price marked on an item - it's all barcoded so they can jack up the price whenever they want. Many times - I find whatever price that is noted on the little cardboard tag that hangs above the merchandise is either a) missing or b) not the same as the price that comes across when the item is scanned...

Finally - I've got a possible solution to the phone number/address request for each sale - Tandy has PO boxes all over the country for Commercial accounts to mail payments. Perhaps we should start giving those - imagine the first day they open those boxes after the semi-monthly flyers go out.....

Lifeflight/Calstar(Shared)

854.0125 Crystal Peak
852.2875 Mt. Allison
854.0625 Mt.Beacon
853.7875 Mt.Diablo

There are other users on these systems(cement trucks on crystal peak,etc.)...they usually switch to the "ground contact" channel for the area they are responding to. The local fire departments usually set up the landing zones so they tend to use those channels. Some common channels are 154.280(fire "white-1") and 156.075 (Calcord) here in the So.Bay/Santa Cruz/Monterey areas. They have programmable radios so they can come up just about anywhere.

I'd like to hear from other AR8000 computer interface users on the subject of software - what are you using to communicate with the AR8000? There's a few commercial packages that seem like overkill for simple memory dump and restore functions, while Windows Terminal or some other communications package seems a little too primative.

Does anyone have a package that seems to be targeted at uploading and downloading without all the frequency database functions?

As an historical note, the Microsoft Access database that I developed and had posted on Vic Healy's Web page could really use a module to do the communications with the radio. I have not made any significant improvements in the database since it was posted. The database is freeware and will stay that way, so any communication modules must be freeware also.

I looked into writing the module in Access Basic, but really don't have the time or experience. Any help from interested parties would be appreciated.

WA>without paying a monthly fee to the phone company.

George,
I don't know what planet you've been living on, lately, but the
no-code license has increased the ranks of amateur radio operators
dramatically over the last few years. A large number of those who begin
as no-code licensees learn the code and upgrade. Every license class
has shown significant increases. Before you rant like this, it would be
a very good idea to get your facts straight, first. You'll seem much
less like a jerk if you do.

: minutes per side for a total of 3 hours.

: Thanks
: Brian

In the back of electonics mags, and nuts & volts, there are ads for
T.R.'s that will record 8 hours on a tape. apparently this is done by
slowing the sped down someawhat. But 3 hours is doable. (Oh, how I
hate that word. Now I'm starting to use it.) Er, easily done.

BTW, I've had poor results with the thinner tapes that have a lot of
tape on the cassette. It seems to have this affinity for the capstan.
Just loves to embrace it, with consequent negative results.

That's one idea that makes me say, "Gee, I wish I had thought of that".
If you could get one of thoose large LCD display watches, it would be
easy to see on tape. I dunno about the scanner display tho. Might be a
problem. But yeah, good idea. actually the audio quality should be real
good.

In the real workd this can and does work. I know a number of fire departments that either have or used to operate with a cross-band repeater system. This to allow a dept on UHF or communicate with the others that are on VHF. Or to allow the intra-county units to monitor and participate on the neighboring county's details. This setup also allows for a wider area for a local repeater poor department to have a county wide paging repeater.

>Second.....

What I meant to say here was its only on recent threads here on r.r.s
that this problem seems to have come to light again.

> Given the wide freq range of this receiver I would have expected AOR to make
> a sturdier BNC - as one must change antennas to take full advantage of the
> radio. I regularly change antennas on a Bearcat 200xlt and a Yaesu FT530 and
> after years, the BNC have shown no problem.

Point taken at this end. I guess if I were to play the Devils Advocate for
one moment I suspect the number of "complaints" against the number of
AR8000 is miniscule...not the point I know - if its a problem its a
problem.

> In your opinion would there be room to fit a sturdier BNC with actual lock
> washer into the space of the current BNC?

I'll have to take a another look on Monday. I doubt there would be room
for a second locking nut but I bet there is room for a "thinnish" locking
washer between the nut and the underside of the BNC bracket.

Have agood weekend.

That "Virtual Down Converter" works.....after a fasion. It's easy
enough to implement. The best approach would probably be to replace
the CPU with a European version.....Javiation in the UK sells them.

There are all kinds of "mods" that can be done to the PRO-2035, from
Extended memories of 16,000 channels to S-meters and much more. All
are complex enough that you won't find them in a 1-paragraph text file
on some Internet site, though.

Rgds,

Bill

2918. Cleveland Metro Police Cruiser Numbering

Newsgroup: rec.radio.scanner
Date: 1996-02-03 00:00:00 UTC
From: sdougla@bgsuvax.bgsu.edu
Message-ID: <sdougla.823322910@bgsuvax.bgsu.edu>
Source record: 240927

This is an idea I came across while sitting here at work...

I am a bit new to the Cleveland Metropolitan area, and since I came here I have been jotting down the numbers of the police cruiser I observe in various suburbs to get a feel for what department I here on a commonly used frequency or two. Maybe somebody knows for sure, but thus far, I have observed the following cruiser numbers, and the important part is the first two digits:

18xx Brecksville PD 52xx North Olmsted PD
19xx Broadview Heights PD 55xx Oakwood Village PD
33xx Fairview Park PD 61xx Parma Heights PD
36xx Glenwillow PD 67xx Shaker Heights PD
39xx Independence PD 68xx Solon PD
48xx Middleburg Heights PD 74xx Walton Hills PD
77xx Westlake PD

The further observation that I made is that both columns of this list are in order numerically and alphabetically, respectively. My hypothesis is this: Cuyahoga County has an agreement with the inherent municipalities to be assigned a two-digit municipality number, which would be prefixed to any further two-digit (or more) unit number for the maintenance of radio traffic and mutual aid situations, and these are done alphabetically with assigned numbers beginning somewhere higher than 01 so that the county can insert it's own law enforcement divsions. This could be similar to the way Ohio County Sheriff's Offices have been numbered alphabetically by county name.

Maybe I am totally off my rocker, but if this is true, and some kind soul out there has a complete list for Cuyahoga and surrounding counties, I would greatly appreciate having a copy of this information emailed to me.

Also, there are always exceptions to the hypothesis...

Cleveland, Parma, North Royalton, Strongsville, Brookpark and Lakewood cruisers have all been observed to not follow this format.

Thanx in advance,

Sounds exactly like a voice pager. I didn't pull out a frequency list, but 152.150 would seem to be in the right neighborhood. With a voice pager, you dial the pager number, and after a beep, you speak a brief message that is then transmitted to the specified pager where it is played through a small built-in speaker.

I get the impression that alphanumeric pagers have now far surpassed voice pagers in terms of sales and use. But voice pagers used to be quite popular.

I have a PRO-51 and its ok. One thing I notice is I've used it so much that the buttons numbers are wearing off. Also, it only has double conversion, so you will hear images on frequencies where they don't belong. That could be a big problem at times. Just wish it had UHF and AM/FM/WBFM select on it.

>

Most new cordless phones now have all ten channels and are starting to
have all 25 as well. The phones will choose a "clear" channel out of the
10 or 25 available. Only the older ones would have fixed frequnecies.

Those 49MHz frequencies posted are only the handset side. So they are not
usually monitored. You usually would want both sides of the conversation
therefore the 46MHz side is the best bet.

Another very active area has been the 150.815 - 151.0 MHz band,
used by commercial tow trucks nationwide. I keep this range
programmed as a search bank in my R7100.

It's was -24F on the porch Saturday morning, and I live in
Kendall County, IL.

Source record: 240703

Please help with some basic questions about secure cordless phones.
The salespeople I have talked to contradict each other, so I turn to
you experts! I want a phone that cannot be monitored by the casual
scanner user.

If the phone is labelled "digital", will only white noise be heard?
Are all 900 MHz phones digital and secure?
What do I look for, or can you recommend brands for a secure cordless
phone?

Thanks

2949. Re: Why is Cheek down on Andy?

Newsgroup: rec.radio.scanner
Date: 1996-02-04 00:00:00 UTC
From: bcheek@cts.com
Message-ID: <4f24cj$7qv@news2.cts.com>
Source record: 240704

jimbob@acpub.duke.edu (James P. Meyer) sniveled and shat:

>>> Bill Cheek is in the process of attempting a "hostile takeover" of
>>>the FIDO net "scanradio" echo/conference.

>>No takeover whatsoever. The old moderator disappeared and left me
>>holding the bag. Gotta do what I gotta do.......probably including
>>giving you a Size #13 crosswise.........

> Most moderators on that network are elected. Some are appointed by
> the outgoing moderator. You however have appeared to have declared
> yourself moderator after the former moderator simply left. You certainly
> can't say that the majority of participants there are pleased with your
> assumed position of "moderator".

You sure are on a "wrong" trip lately. First of all,
"most" moderators are NOT elected. The moderator is the
person who STARTs the echo, and otherwise, who he appoints
to succeed him when he goes on to bigger and better things.
Elections are not common, and are usually reserved for when
a moderator vacates and leaves no one in control.

I did NOT "declare myself moderator". I became THE
moderator when Ken Storm vacated and left it to me. AND,
the majority of participants there ARE pleased with my
efforts thus far. My netmail and e-mail run about 10:1
FOR vs AGAINST. The few public challenges, like yours, are
the exception to the rule. Most participants KNOW and
understand that the echo is for scanners and scanning, and
NOT for being belligerent and snotty....so when they keep
their silence, YOU can't draw a logical conclusion from it.
They ARE SUPPOSED TO KEEP THEIR SILENCE, you dumb ass!

>>> In an attempt to make the FIDO echo look more like USENET, he posted an
>>> encoded .gif file there. That's bad enough,

>>No attempt to emulate USENET at all. Just an effort to help the users
>>there a little more is all. What's "bad enough" about that? YOU sure
>>as hell don't help anyone.

> Encoded .gif files have never been a part of FIDO.

They've never NOT been a part, either. It is a non-issue.
What is AT issue is the free-flow of information relative to
scanners and scanning. Anything that enhances that flow is
worthy of careful consideration. And -=I AM=- going to
consider it. Take it or leave it..... :-)

> FIDO network messages are not "free" in that, unlike USENET messages,
> the long distance phone calls that serve to pass FIDO messages must be
> paid for by the BBS's that carry FIDO.

Nothing is free, harelip. But Fido messaging almost is. For
instance, the bill to me for hundreds of echos and tens-of-thousands
of messages runs about $2.50 per quarter, or about 85-cents a month.
Don't lay that old-time sanctimonious bullshit on me, harelip.

> When you consider that only a few users can make use of
> those .gif files, and that all the BBS's must carry them, you can see why
> they are not used. And I feel that pointing out your technical error *is*
> helping someone.

But you are an utter imbecile, then. There is no "technical
error" in what I stated. And who the hell are you to assert
that "only a few users can make use of GIF files"? And don't
you know how to read? Geezus, dude, I am in a FACT-FINDING
and DECISION-MAKING mode on that issue. I did not declare
that GIF files had to be used. I -=AM=- trying to find out
the graphic file formats that CAN be used by the most people.

DIDN'T YOU READ THAT in what I said previously, harelip?

>>> but the content of the .gif file was "remarkable" to say the least.
>>> It appears to be a file that Andy Moss put together to show folks how
>>> to replace a lithium battery with one of those double-layer memory backup
>>> capacitors.

>>Moss didn't specify the type or style of capacitor.

> The diagram clearly specified "4m7/5V". There is only one type of
> capacitor with those values that even comes near to being able to fit in
> place of a lithium battery. Andy gave you plenty of clues, and yet you
> remained clueless.

No. Moss was in serious error, both in lack of detail as well
as in principle. I proved it, too. And there is one more
error there that I did not point out yet. There are no "5V"
capacitors of that sort. Find one, harelip, and spit out the
part number.

> Been "in the technology", but you haven't learned much, have you?

Would you care to challenge me somehow by slapping your wallet
on the table? I bet not.......... your attack is cheap. How
about backing it up? Nice and meaningful-like?

> A 4700 uF cap will keep a memory chip alive for a week.

NOT if, as Moss said, a lithium cell drains prematurely. That
indicates a problem that needs a fix; not a downgrade design.
If a lithium cell will drain in a week, then that capacitor will
drain MUCH sooner. I proved THAT, too.

> It's not necessary to have more capacity than that.

For you, maybe. That is a nescient statement for a generality.

>And NOW, Mister Meyer, you've turned into a greasy lying snotball.
>Here is *exactly* what I added to that graphic:

> Ok, now what happens when the
> capacitor discharges? And it won't
> take all that long for a 4.7-uF cap
> to discharge. Then what?
> Makes no sense to replace a
> battery with a capacitor. Duh?
> Why downgrade a perfectly good radio?
> This note added 1-26-96 by
> Bill Cheek 1:202/731

> And you don't consider that statement snide and spiteful? Duh?

Nope. It is a technical cautionary statement. No personality
added. No names. It's ALL about the mod; NOT the author.

>>You didn't DARE talk your line of shit and quote EXACTLY what I said,
>>now did you? Well, there's what I said, and it speaks for itself.

> I didn't have to quote anything. You did it for me.

THAT's right. I HAD to do it for you, because you didn't
have the lugnuts to do it in your shitslinging post.

> And I agree, it *does* speak for its self. It tells me you are clueless

Then think that. You're entitled. Go ahead and continue
losing, if you want. It's a free country.............

> and didn't give Andy a chance to explain things to you before you tried
> to make *him* look foolish

Horsefeathers! Moss had every chance in the world to explain
himself. The first time. He didn't. He published a simple
little hack that downgrades the capability of the radio in
which it is installed. And he did it to SOLVE a problem,
which is the least brilliant aspect of that hack. That reminds
me of a comparable stupidity in the computer scene, SoftRAM,
a software solution to a hardware problem. Moss's mod does
not FIX the problem; it works around it, at the expense of
a downgrade of the equipment.

>>Where exactly is the attack? Moss's technical errors and my response
>>to them is one thing. "Attack" is quite something different. There
>>was nothing in what I said that can be construed as personal, you low
>>life, lying, belly-dragging, snot-sucking snake-in-the-grass.

> The attack was in your cowardly inclusion of that misinformed
> addendum to Andy's diagram. You were in error. Andy was right.

Geezuse, harelip, you are one stupid nincompoop. Cowardly? I signed my name and address to it! I did it right, and yet you still come barking and heel-nipping. Goes to show, you're after ME.....and NOT what's right and proper. Ok, so you lose...again.

It doesn't matter WHO's right. What matters is that people get to see pros and cons before they booger up a perfectly good radio. Let 'em decide for themselves, harelip.

>And you won't deal with me in private now will you?

> Did you "deal" with Andy in private?

Matter of fact....yes, a LOT over this last year.......

> Did you even *try* to find out what he was doing before you attempted
> to make him look foolish?

I didn't attempt to make HIM look foolish. I set another point of view in that graphic so that people could think twice before downgrading their expensive radios. It had nothing to do with your cousin, Moss. I focused ON THE MOD ITSELF and nothing more.

>>Ok, so we deal in public. Have it your way, harelip.

> So far I've only stated the facts. You're the one who had to resort
> to name-calling. Looks like you don't deal with facts too well, doesn't it?

Ok, harelip, shoot off your mouth some more then. But any time you're ready to just make a case instead of running off at the mouth, I'd be pleased to take you on and frap your jowls back and forth so they sound like a deck of cards being riffled.

For starters, let's see some REAL facts.....not your harelipped interpretation of things as YOU WANT TO SEE THEM. Take each thing one at a time and lay it on the line.

Else, observe the mistletoe on my shirttail and act accordingly. And eat my shorts whilst you're at it. Want me to mail you an especially crusty pair?

Bill

Source record: 240707

FWIW, that RS part is also the replacement key-pad-rubber for the PRO-43, too. The so-called "extra" button that needs to be clipped off for use on a PRO-39 is the am/fm modulation button on the PRO-43.

2953. Re: How do scanners cause problems on planes?

Newsgroup: rec.radio.scanner
Date: 1996-02-04 00:00:00 UTC
From: fsgafrick@aol.com
Message-ID: <4f28tp$fc6@newsbf02.news.aol.com>
Source record: 240708

The problem lies in the electromagnetic energy generated from these devices. and it is actually partly due to the aircraft itself. The older aircraft were more immune to this problem because they were *not* fly-by-wire aircraft as most of the airplanes are today. The newest commercial aircraft, Boeing 777, is a fly-by-wire aircraft, meaning that the connection between the yoke (steering wheel) and the flight control surfaces is not mechanical at all, but electrical. although these wires are shielded, there is still stray voltage running all over the place. That's why they place navigational instruments in the wingtips, usually on starboard, so as to keep these stray currents from damaging these navagational receivers, much less mis-tuning them.

Dear Todd:

Thanks for the info. I was all set to chunk my Pro-39 out in the trash.
I'll be heading to the local Radio Slack today for that part and will
give it a shot.

Regards
Dave Ferguson

lcd panels of all kinds do freeze. If it's a hard enough freeze, the panel will crack and you're SOL. No repair possible, just replacement.

I'd say you are damn lucky at 10 below. Remember what the "L" in LCD stands for? That's "Liquid".

"Automotive Grade" lcd panels (like car radios, etc, etc) are engineered for 40 below or so. "Consumer Grade" panels start to get 'slow' at the freezing mark and you are in danger of destroying the panel at 0 degrees or so.

Keep your electronics warm, folks. It's not just the batteries.

2971. Re: Radio Shack: You've got Questions. We've got answers

Newsgroup: rec.radio.scanner
Date: 1996-02-04 00:00:00 UTC
From: sfs@gnn.com
Message-ID: <4f3dh3$4iu@news-e1a.megaweb.com>
Source record: 240726

(lets get back to something more practical and cut out the
bickering)

I use the Grove LP and it has survived 2 Chicago weather years 15
feet above a three story apartment building and 5 Wisconsin weather
years 25 feet above a windy hill. If you need replacement parts
they are available cheap from Grove. I have even modified the
mount from the side to the rear by removing the folded rear element
and slipping a pvc sleave around the boom and drilling the
appropriate holes to replace the rear element. Than I used U-bolts
to attach the rear extended pvc boom to a "metal" mast. Why did I
do this? To experiment, what else. Results? Its still up there
and it is slightly more directional in the low (~50Mhz) band. I
have also noticed that the higher the frequency the more lobes that
appear. I have about 4 (clover leaf) lobes at 2 meters and about 8
lobes at 440Mhz. NOT good IMHA! I also noticed that the closer to
a 90 degree angle off the boom you can get the feedline the better
the "pattern" is. However, with a vertically mounted LP, it
becomes impractical so I just bring the coax (9913) feed directly
back along the boom. I am sure that this has a big effect on the
pattern.

Whatever happened to the old laymens rule of thumb that the more
metal you have up there the better? Create vs Grove? I assume
that with a LP the more elements for a given bandwidth the flatter
the gain curve (+6dB) is across the band and the better the pattern
is. I know that with my Grove LP that the gain is NOT very
consistant but when I switch on the preamp that inconsistancy is
barely noticeable. Besides the Grove LP does a bang-up job on the
service/utility bands anyway so unless you have a continuous
coverage receiver its not a bad LP.

One thing I would not buy Goves LP for is if you intend to transmit
in the ham bands. The SWR @2m is a little too high for me (~>2:1
before and after my boom mod). In this case I would probably
spring for a Create LP if your looking for an all-in-one antenna.
One of these days I will get one (lets see April 15th, hmmmm...).

Comments, suggestions, criticism welcome...

(pass the Bud lite please)

I am looking for a used cellular capable base scanner.
Prefer RS PRO-2004/5/6 but will not exclude others.

Features wanted:

Programable search
Cover 869-894Mhz in 30khz steps
At least 100 channels
Must be in full working condition!

(must be willing to ship COD)
Please send e-mail, Thank you.

I happen to know that Bill has scanned more bandwidth that any of you
novices. He is technically knowledgeable and has followed this field since
the equipment was tube based. If I had to place by bets on the advice in
these groups, I would pick Bill.

Meaningless banter? Well, I have yet to see him attack first.

dear kevin,

the general radio mobile service, hence GRMS,units run in the upper uhf frequencies and are great radios for personal use. the FCC allocated this band a long time ago and few people know about it. but you pay the FCC $80 for a five year license (no testing involved) and that covers the entire household no matter how many radios. i don't know what the rules as far as advertising goes, on the net. so i'm not sure how much i can tell you, because it's part of my business. but i can say if you would like more specifics, you could call me at (520-772-3892) and i could fill in the blanks for you.

good luck

I have a Bearcat BC-2 Multi band Scanner (that I have hardly used)
for sale.

It's a pretty neat device in that not only you can just punch in the
state that you are in (and it picks up Police, Highway Patrol, DOT,
weather, etc.) It also alerts you to the presence of radio waves in
the vicinity (has a large red light and beeps). That way it offers
protection from Vascar, airplanes, etc). It retails for $250+ and
mine looks brand new. Includes cigarett lighter plug, mounting
brakets, car radio antenna splitter/and wire antenna (that attaches
to your windshield with small suction cups).

$$ Best Offer.

From: darwin@iquest.net
Message-ID: <DM94nG.6uo@iquest.net>
Source record: 240771

This morning it was about 10 below and I noticed something odd with the LCD display on my Pro 34. The numbers on the display were changing VERY slowly. When it locked in a channel, the numbers didn't lock in immediately, it took it a fraction of a second to form. How cold would it have to be before they quit working all together?

Would extreme cold also slow down the processor?

From: Business Resource Group <drunyon@holli.com>
Message-ID: <DM990C.970@iquest.net>
Source record: 240773

If memory serves me, that is most likely the California Department of Justice. 154.680 is the repeater output for their first 6 channels. All have an input of 155.460. Each channel has a different CTCSS tone for different areas of the state.

WHen I lived out there, DOJ's Bureau of Narcotic Enforcement (BNE) was very active on those repeaters as well as lots of simplex surveillance freqs. They did LOTS of surveillance using aircraft. A lot of that traffic was on NALEMARS...155.475 MHz.

Go to the Base Station in Concord or Scanners Unlimited in San Carlos and buy one of Bob Kelty's freq books...Government Radio Systems-Golden Gate Edition. It will have a good breakdown of DOJ's comm system as well as unit ID's. I think BNE units utilized the ID of "Nora" and the Identification Division used "Ida".

Good luck and happy listening.

2986. BC 55-XLT Charging Current.

Newsgroup: rec.radio.scanner
Date: 1996-02-04 00:00:00 UTC
From: bd703@scn.org
Message-ID: <DM88sD.9I1@scn.org>
Source record: 240776

Can anyone tell me what the charging current in the 55-xlt is SUPPOSED to be?

With 13.8vdc applied to the power connector I am reading only 20 ma going into the nicads under charge. Note: these are cells that are completely discharged.

I would think that the charging current should be at least 50 ma, the .1C rate for standard 500 mah AA ni-cads.

Thanks in advance

Kerwin

In article <4evmjb$ld4@news.htp.com>,
<an502258@anon.penet.fi> wrote:

>Is this scanner worth the price

Yes, I think it's quite a good value in a lower-mid range model
if you buy it at discount, e.g., mail order or at Best Buy stores.
It's an excellent choice for a first time scanner owner or as
a backup scanner for someone who owns a premium model.

The BC860XLT has odd-shaped keys and there's a glare from the glossy
case finish, but it's good, predictable performer save for images.
The low priced BC860XLT I used was cleaner, RF-wise, than the
more expensive, but disappointing BC890XLT and Radio Shack
PRO-2036 I tested.

For a full review, read "The Uniden Bearcat BC860XLT,"
in Monitoring Times, May 1995.

>or are there better ones out there????

Yes, you can buy better, but it will cost more. Check out the
Uniden/Bearcat BC9000XLT, with a street price of about $380.
The pricey Radio Shack PRO-2042 is another option, but buy it
mail order or wait for a sale.

I published full length reviews of these recent
scanner models in Monitoring Times magazine:

Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042

Note: Reprints of Monitoring Times articles are available
for $2.00 each from Grove Enterprises, PO Box 98,
Brasstown, NC 28902, tel. (800)438-8155.

NOTE: I don't get any part of the $2.00.

: Morning Fred,

: < [snip] Does Javiathon have anyting to add
: > on your side of the ocean?

: Mmm...not sure if I'm half Company half man now :-)

: The loose BNC "problem" was a little more apparent on early versions - we
: had a few customers come back to us about it. AOR said they addressed the
: problem and in the last 12/18 months or so I cannot recall any direct
: customer complaints re loose BNC connectors.

: Its only in recent weeks and on threads here on r.r.s that this
: "problem" seems to have appeared - the chances of this "problem" is probably
: increased for those who change antennas on a regular basis.

: To tighten the lock nut is not too difficult but be careful and don't
: attempt brain suggery with a broken bottle - make sure you have the
: correct tools. Dissasemble the AR8000 by removing the two screws in
: the battery compartment and the two small black srews on the side (just
: the front half will do). Split the radio in half placing the front half
: to one side.

: Remove the three rubber kobs from the top and the three locking nuts
: around the On/Off, Squelch and Rotary Dial. These (the locking nuts) are
: probably the hardest things to remove as they are "down the hole". If
: you do not have a specific tool a pair of fine tipped long nose pliers
: should be OK.

: Remove the two screws at the bottom of the top circuit board. About on third
: of the way up on either side of the board close to the edge are two white
: connector blocks labled J4-1 & J4-2. You will see though the innermost "hole"
: the leg of the battery contacts slighlty bent over. This board will lift
: out but be careful the two battery contacts - to make life easier you could
: just straighten them slightly.

: The lower board and BNC connector should now be visible and allow
: access to the locking nut. By removing the three retaining screws on the
: bottom board you can also lift this board away together with the top
: plastic section and BNC socket from the bottom case which may also make
: life a little easier. Again a pair of small long nosed pliers should allow
: you to tighten the locking nut quite easily. If you consider adding some
: form of adhesive I would suggest using some specific Adhesive designed for

: use with threaded fasteners.

: Re-assmeble being careful to ensure the two battery contacts are located
: correctly in the two connector blocks. You may wish to bend the end over
: slightly just to stop them "falling" out when changing batteries.

Your best bet is to use a liquid thread-locking product.
One that I am familar with is called Locktite...they manufacture 2
versions... 1.Blue:can be removed with normal hand tools easily, but
holds tightly under normal use.
2.Red:is virtually permanent under almost ANY circumstances!
This stuff generally needs an impact wrench or a chisel to remove the
fastener!
In your situation, I recommend the blue, as if the connector ever HAS to
be removed, the red version will render this nearly impossible!
If it turns out that the blue is inadequate, then you can always redo the
job with the red.

2989. Pro-51 Cell Freqs

Newsgroup: rec.radio.scanner
Date: 1996-02-04 00:00:00 UTC
From: Todd Coles <tcoles@frontier.canrem.com>
Message-ID: <040296.20160871747.n@frontier.canrem.com>
Source record: 240779
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have a Realistic Pro-51 scanner. It does not receive the cell range, but a book I just bought provides a solution. It is not done through hardware modifications. Here are the steps as they are listed;

1. turn off scanner
2. press 2, 9 and L/OUT all at once
3. turn on scanner
4. MANUAL
5. 23
6. up arrow
7. MONI
8. PROG
9. MONI
10. channel # (pick one)
11. enter

Now, when I tried this all I managed to do was clear all my stored channels from the memory. I tried turning the scanner on while holding the three buttons mentioned in step 2. This cleared the channels.
I was wondering if anybody had managed to accomplish this with these steps, or others. Also, in step 10, it mentions Channel #. This must be one of the ten monitor channels? Am I right? Please let me know if this really does work and how to do it. Thanks.

Todd

I might be interested if you would include the frequency range, and types of
modulation that it can receive. What is the scan speed and how many
conversion steps does it use to obtain sugh a high sensitivity? Can it store
individual frequencies or do you just stick them in the tank?

154.680 is most likely the repeater output for the California Dept. of
Justice. Their channel plan is as follows:

F-1 through 6 154.680 (out) 155.460 (out)

Edward Lewis (elewis@dsp.com) wrote:
: While looking around Radio Shack today I noticed a TV- FM amplifier
: with a band width of 50 - 890 mhz and 20 db gain with a control for
: the gain. I bought one to try with my scanner. the problem is the amp
: is 75 ohm and my coax ,antenna and scanner are 50 ohm should I worry
: about signal loss from the mismatched impedence or is this something
: that I don't need to worry about. If this unit works I will report
: back to the newsgroup as this unit is 1/3 the cost of a pre-5

It's *probably* OK to just connect the two together. Impedance mismatch
is not nearly as critical when you are receiving as when you are
transmitting. A relatively small mismatch like what you are describing
will not hurt you much unless you are trying to get VERY weak signals.

However, don't hold your breath on getting much useful out of this
amplifier. Try it, but save the receipt and open the package carefully,
if you know what I mean.

Tad,

I too wondered the same when shopping for scanners. It seems to me that the 2042 offers only convenience features over the 2035 (auto lock-out of blank freq., enhanched search functions, etc.) I decided to save the $$$ and get the 2035. I plan to add a computer control in the future so the extra features were less important then price!

Todd,
It only works with EARLY PRO-51s. Newer versions were returned to the
factory and and reworked so that this keyboard mod would not work. I
know, I bought a new one from RS, the mod didn't work, so I took it back
for a refund. Two weeks later, I bought a used PRO-51 that responded
to the keyboard thingie. Good Luck!

I had a friend take the ROM out of his Bearcat and throw it into
an EPROM reader/burner. Spending several hours staring at the hex
numbers on his screen, he found what were essentially all of the
frequency settings. He changed the hex values to allow the entire
800 MHz band and burned a new EEPROM and stuck it in his
scanner. Works great.

Source record: 240545

At the risk of starting a never-ending thread, what is the best
"mid-range" handheld scanner? The feature I desire are as follows;

1. At least 200 channel memory
2. Coverage to at least 1000 MHz (1.3 GHz preferred)
3. GOOD audio. Needs to be heard in loud area's (racing)
4. Price in the $200 to $350 range
5. Full-featured search (limit search, search lockout, etc).
6. Cellular restorable a plus :-)

I wouldn't worry too much about easy tests. Ham rosters are going to steadily drop for the xt few decades, now that that people can communicate through the Internet. The code req was eased to get people to stay on, or join up.

This is a fringe hobby...don't sweat the licenecse requirements. Not too many potential new hams are out there anymore...take what you can get.

>
Some Berks County PA Frequencies

33.940 County Fire
155.070 County/Township Police Dispatch
155.010 County/Township Police F2
155.220 Amb-Hosp.
154.310 Zone 4 Fire Dispatch
154.400 Zone 4 Fire F2
154.160 Zone 4 Fire F3
154.385 Zone 4 Fire Police

The following frequencies used by Reading City Trunked System for
fire, police, road, and water departments.
866.0125
866.3000
866.5125
866.6125
866.9125
867.2250
868.3250
868.5875

And if you are interest in Aircraft Freq. for the Reading/Lancaster
area I've got them too. (I'm a pilot, so I know these work first hand!)

119.900 Reading Tower
125.150 Reading Approach
127.100 Reading ATIS (recorded weather/airport info update hourly)

120.900 Lancaster Tower
125.675 Lancaster ATIS (recorded weather/airport info update hourly)

123.050 Smoketown Airport UNICOM (6miles south east of Lancaster
Airport)

And if you need more leave me know.

3005. What advantages to buying a scanner at Radio Shack

Newsgroup: rec.radio.scanner
Date: 1996-02-05 00:00:00 UTC
From: slwork@netcom.com
Message-ID: <slworkDMA84M.D6A@netcom.com>
Source record: 240551

Is there any advantage to buying a scanner from Radio Shack versus getting one somewhere else? Radio Shack might have more models to choose from, but would I be better off getting one which is sold somewhere else? Any comments would be appreciated.

It would be nice if Radio Shack would at least give me a catalog which describes their products without forcing me to stand in line to pay $3 for one, while waiting for several other customers to recite their name, address, phone number, etc.

wstrayer@i.netcom.com wrote:
>I forgot to mention that I am scanning in Bodega Bay, which is 100+
>miles north of SF.

Wow! They must have moved Bodega Bay further north. I used to live out your way...both Petaluma and Point Richmond. I don't recall it being anywhere near that far form SF. I used to play golf up there and it never took more than an hour from the city.

Anyway...I think DOJ has a repeater in Santa Rosa. Actually I think they have some sort of office up there too. Check your phone book and see. You'll probably hear a lot of reference to Rancho Cordova also.

Happy listening.
DOUG

P.S. If memory serves me, there is a CB shop in Santa Rosa that also sells scanners and freq books. Again, check your phone book. Sawyers Books in downtown Santa Rosa carries some of the scanner magazines.

3008. PRO-2042 vs 2035

Newsgroup: rec.radio.scanner
Date: 1996-02-05 00:00:00 UTC
From: tad@why.net
Message-ID: <4f3m4n$3lt@what.why.net>
Source record: 240554

I've been away from scanners for a while and dropped into the Radio Shack the other day to see what was new (with the intention of buying soon). I liked the 2042 and the 2035, but I'll be darned if I can figure out what the difference is, other than $120. Can anyone clue me in? Perhaps make a suggestion for something to look at? I would like to get a base station unit that has features similar to these two.

Thanks,

Tad
